It would be interesting if newsmax provided a clearer picture of the Bosnia mission versus the Iraq quagmire. Both were dumbass, but at least with the Bosnian adventure the bulk of the troops and costs were not on the backs of the United States. Whereas with the Iraqi mess, the soldiers, the cost, the fatalities and casualties are almost exclusively American. And...there's no end in ! Maranatha-good-buddy to patriots like dxAce who laugh in the face of Johnny when he comes marching home HAW-HAW!!!! It's friggin' hilarious!!!

O-kay, to be fair, I don't want to minimize the contributions from other
members of the "Coalition of the Willing" who are standing
shoulder-to-shoulder and helping carry the heavy load -- like Mongolia, who
contributes one soldier for every 1500 Americans. The generosity makes me
wipe a tear from mah eye, it reeelly does.

From: "<RJ>" <baranick@localnet.com>
Message-ID: <64jso11gglh1i34b5riuioa3eqq1e0ee51@4ax.com>
Source record: 52118

When I got the digital camera,
I had to get the NIMH batterys and the charger.
then I said;
Why buy alkalines any more ?
and I switched my radios to NIMH batts too.

Now here's food for thought;
A pair of alkalines measure 3.1 v
A pair of NIMHs measure 2.4 v > 2.6 v

Would the lower voltage affect the performance
of any of these "3 volt radios" ?

????

Dear Mr Ace

Nice to see that you are the resident authority on dumb asses. I am most curious as to how you acquired so much knowledge in the area. Is it possible that you studied it at a place of higher learning? On the other hand it may just be first hand knowledge based on person experiences.

Yes I agree we up here must seem stupid to many of you Yanks. Heck we:

- Elect our leaders and don't need a court to do so

- Don't send our young men off to die for oil rights

- Manage to have a health care system that makes sure even poor folk get medical attention

- Don't run up huge government debit that will cripple our grandchildren financially

- Manage to speak more than one language

- Have a balance of trade where we sell more than we import

- Have the oil gas water and wood you need to keep your economy limping along

Yep we sure are dumb up here. Glad all you smart folk live all of 60 miles from my house. It is amazing what that one hour drive can do to people.

With most of my radios (Kaito 1102, Icom IC-R5, Degen 1005) I don't have a problem using 2500 mah NiMH AA rechargeables, but with my Sangean Super 909 (a notable battery hog) using NiMH resulted in a lower signal reading and much less light out of the backlight. My sollution to that was to make an external battery pack to hold 5 AA's (5 x 1.2 = 6.0) and plug it in to the jack on the radio. Works perfect!

Shawn

Where in Canada are you? I'm near Duluth MN (Superior WI), about 120
miles from the US/Canada Border.

Your list makes perfect sense to me, although the name calling really
bothers me... The greatest bumper sticker that I've seen lately is
"Canada, looking better all the time!! The second best is "If you're
not outraged, you're not paying attention!" I'm personally, as a US
citizen, disgusted by the lies that have been handed to us by the Bush
administration, and the impact that has had on our image around the
world. Seriously though, these type of messages belong on a political
list, and not on a list that is devoted to shortwave radio. Part of the
intrigue of SW is listening to opinions from all over the world - we
need to keep that in mind.

I've never had a problem using NiMHs. I think most solid-state electronics can operate in a range of tolerable voltages; the only place there'd be an issue is in something with an electric motor.

My experience with alkalines and the digital camera was that the camera would announce "Low Battery" after about a half-hour's use, but the batteries would still light up green on the battery tester. I think most non-technical people would just take the batteries out of the camera and throw them away without even considering if they had some juice left in them. What a waste.

NiMHs last a lot longer in the camera, and they only take an hour to charge. They're so much better than the old NiCads, too.

Buy the Super909. It's a great radio. I love mine... sounds a lot
better than the stock and performance is also much better. I've had
both.

Dee Flint spewed from her filthy fuck hole:

<cunt snipped>

Just what we needed.....more crap from amateur radio's famous, fat,
filthy, tramp.

Maybe if there weren't so many faggots in ham radio Dee might get some
dick. Then she wouldn't have to settle for the tired old nigger truck
driver. No self respecting white man wants to fuck that nasty tub of
lard, but lucky for her a nigger will fuck anything. Most hams are
looking to recruit "young men" into ham radio and "administer" tests to
them.
They're always eager to "elmer"
them.....hahahahahahahaha!!!!!!!!

I gotta current copy of the Army MARS Netplan 2003 (Same as 2004 and 2005)

It has the frequencies for Army / Navy / Air Farce and Marine MARS
frequencies.

Is it illegal for me to post it here since it says for official use only?

LOL, one of the ugliest engine compartments I've seen in a long time.

I wonder if his Jack Russells rode in the back seat of the Rolls. Hyper little bastards...

It doesn't smoke? The ones from the mid 70's sure did. Brand new, most of the time. I was soooo happy to flunk all the Rollses, Benzes, and Beemers when they came in for emissions testing, just to see the look on the owner's faces. The Beemers and Benzes just put out too much CO, but the Rolls motors were total crap. They failed often, tossing rods and spinning bearings. They made jet engines too.....scary!

One guy had just bought a Rolls in Beverly hills and it had about 1200 miles on it when he took it home to Vegas and had to register it in Nevada as a used car. It smoked like hell and he went ballistic when I told him he needed to take it to the local Rolls place.

The Rolls place passed it, and got nailed by DMV for it. That thing had the piston rings of a 150,000 mile Ford Pinto..

I had a scanner once that squealed when you turned the volume up when running Nicads or NIMH batteries. It only did it on Alkies when they were about done.

Can't remember the model number any more, but it was a Radio Shack model...

I've always thought the whole chicken-and-egg question does little more than demonstrate that philosophers are all a bit thick. define "chicken" - pretty soon you have some form of a genetic spec. At some point during the evolution of a chicken, a couple of non-chickens did the wild thing (made the beast with two beaks?), and by the miracle of recombinant DNA ended up with a chicken egg. Ergo the egg came first. It also doesnt matter what you decide to call a chicken.... QED.

Cheers
Terry

Dee, it's too me that the fundamental principles of the Republican and Democratic parties don't vary much, extreme in the fringe edges.

On the other hand, when you have candidate of either parties who are total incompetent, such as Mitt Romney and Kerry Healey who not only are incompetent and also don't have a hint of a clue, it is critical to limit or inhibit their aspirations by whatever means is needed. The same can be said about John Kerry, in the last election. Kerry is a total and demonstrated dumb ass, who is only in politics to advance his rather egotistical ambitions. I would rather vote for his wife than him, in future senatorial contests.

By contrast, I rather like what Ted Kennedy does in the senate, even though I am a conservative Republican.

Perhaps I'm strange, but I would rather vote on a candidate based upon their past performance and voting record in the job, than then their party affiliation. What they professs to believe doesn't really do much for me.

Party loyalty also doesn't do much for me.

Harry C.

Better yet, opt out of the sheeple-orientated party system and vote for the
CANDIDATE who best matches your politics. Urge your friends and family to do
the same. Only then will we get candidates who listen to PEOPLE, not to moneyed
interests.

Beep beep

I was looking thru the FCC database and came across listings for "Target Area".

One said "10-13"

Also, does "Azimuth" tell you where they are beaming their antenna to?

This one said 75.0 & 100.0. How do you interpret that?

Thanks for your help!

54. WW2

The Japanese Military in WW11 were incredibly cruel, especially to the
Chinese and Korean peoples. The rape and beheading of Australian nuns
in New Guinea was a full betrayal of the Bushido Code of Honour. The
machinegunning of aircraft and ship survivors was a commonplace.

The hot-jock cruelty of Japan's flyers in her airforce, cost the
Japanese Navy the crucial Battle of the Coral Sea.
Seeing what they thought to be 'easy meat' the Japanese Divebombers
swooped to the attack of Australian Admiral Cracie's Cruiser Group. The
cruisers were on full prop, to create the biggest wake signature, in
order to be more easily seen from the air. Crace was dragging his tail,
like a bird attracting attention from the nest.
Having dropped all their bombs, the Japanese divebombers then had the
dreadful realisation of an enormous mistake as they flew back to their
Carrier. There in plain view, were the American Carriers, without
fighter cover. However the cruel eyes of the pilots, were betrayed by
their cowardice. Instead of plunging to the attack, and using
themselves as bombs, they flew back to their Carrier. It cost their
Nation victory in the Pacific War.
Later at the Battle of Midway, a number of the American Divebombers
purposefully released their bombs too late, making their plane and
their bomb a double hit.
Their courage turned the tide of the Pacific War.By their deaths,
Australia was saved from many Rapes of Nanking.

The suffering of the Japanese people at the hands of their military,
and the dreadful firebombing of Tokyo and the A Bombing of Hiroshima
and Nagasaki has touched the hearts of Australians over the years. We
in Australia have sought to build bridges of peace and prosperity, and
overcome the wounds of the past.
Australia has made many friends in Japan.
We find we like Japanese people but we dont like them coming into our
waters to kill and eat whales.

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

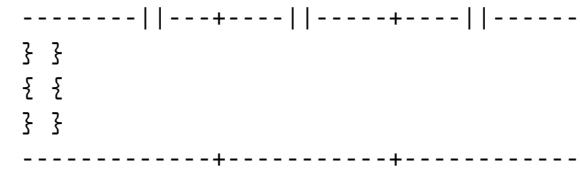
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

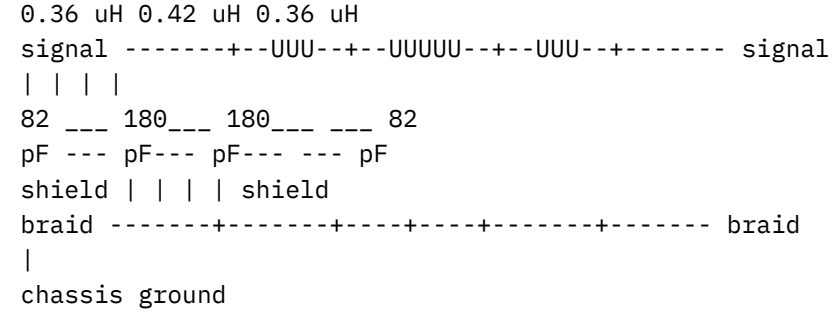
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

--- end ---

I would venture to say that he knows more about it than someone with your attitude likely ever will.

He could likely quote Beverly from cover to cover (a slight exaggeration)... can you even come close? Or a better question would be are you even familiar with him at all?

Exactly. In the case of a braided outer conductor where they *are*
all in contact with each other (and they are of course) along their
length, they would be properly modeled as a singular thin tube.

Bullshit. Examine the properties and uses of Litz wire. It ONLY
functions properly when the conductors ARE separated electrically from
each other except for their end points.

A Litz transformer primary winding in a switcher operates much
better than a single solid strand, but using multi stranded bare
conductors of the same cross sectional sum would not operate any
better than the solid strand. Such a configuration would appear no
different than a solid strand, from a skin effect POV.

The reason... skin effect. Yes, "it" does "care".

>And also woven as in Litz wire. Otherwise the magnetic field will
>force the current to the outside of the bundle.
>

It comes down to individual strands. If they are separated from
each other electrically, the configuration of "the bundle" matters
not. The skin effect is exhibited in each strand, not in the bundle
as a group.

Conductors that are in intimate electrical contact with each other
along their length operate as a single strand and THAT bundle would
"push" electron flow toward the outside of the bundle as f increases.

The word you want is "source". There must be a return path to the
source for flow to occur.

Hi all.
I am looking for a decent basetabletop receiver, I don't have much spare
cash with xmas coming,
but I have a absolute mint 1 month old Sony7600GR
http://www2.rnw.nl/rnw/en/features/media/productreviews/receivers/icf-sw7600gr.html

2-Sony7600D also known as the Sony 2002
http://www.dxing.com/rx/icf2001.htm

3-Tecsun PL-230 also known as the Grundig YB-550PE
http://www.radiointel.com/review-tecsunpl230.htm

4- DX394 boxed in excellent condition.
http://www.dxing.com/rx/dx302.htm

I would be happy to swap either 1, 2, 3 or indeed all of the above for the
right receiver
cheers
Roger
PS, I am in the UK

ABOUT - XM Satellite Radio - from Wikipedia
http://en.wikipedia.org/wiki/XM_Radio
- - - Satellite Radio in General
- - - http://en.wikipedia.org/wiki/Satellite_Radio
More About XM in Canada from Wikipedia :
In November 2004, Canadian Satellite Radio filed an application with
the Canadian Radio-television and Telecommunications Commission to
bring the XM service to Canada. Along with SIRIUS Canada and CHUM
Subscription Radio Canada, CSR was one of three applications for
national subscription radio services submitted to the CRTC.
On June 16, 2005, the CRTC approved all three applications. The
decisions were appealed to the Canadian federal Cabinet by a number of
broadcasting, labour, and arts and culture organizations, including the
Friends of Canadian Broadcasting, CHUM Limited, and the National Campus
and Community Radio Association. The groups objected to the satellite
radio applicants' approach to and reduced levels of Canadian Content

and French-language programming, along with the exclusion of Canadian
non-commercial broadcasting. After a lengthy debate, Cabinet rejected
the appeals on September 9, 2005.
XM is currently working on XM Canada, and has started to test repeaters
in Toronto, and Ottawa. Although an official launch date for XM Canada
has not yet been announced, it is estimated to be December 16, 2005.

HELLO CANADA - XM's Canadian Channels 'magically appeared'
on some US XM Satellite Receivers on November 17, 2005. :o)

Electrostatics are a bit different. Accumulated static charge is a
bit different than a DC or AC source, a conductor, and a return path.
```

thats not correct. case in point, it is quite feasible to analyze a conductor as comprising an n-tuple of (very thin) strands, completely ignoring strand-to-strand conduction (if the strands are thin enough). I once hacked up a Mathcad worksheet that did exactly that, and it agreed well with messrs Vandelac & Ziogas. slow though :)

if your argument were correct, multiple parallel strands of magnet wire in a xfmr would behave just like litz, and it doesnt.

A friend also had a problem a few years back with a litz cable, about 1" OD, with many thousands of strands. the strands were woven into smaller bundles, IIRC about 5mm OD, and these were then woven into the larger cable. A screw-up by the manufacturer meant the centre two bundles were not woven at all, but ran down the center of the cable. When they started pumping a few hundred kW into the cable, losses were extremely high. Close inspection of a cable segment showed why, and severing the central bundles solved the problem.

>
> Conductors that are in intimate electrical contact with each other

the bundle doesnt do the pushing, its the H field.

Cheers
Terry

Actually diapsids came before either lizards or birds and if current thinking is correct birds are not descended from lizards.

If the current were only on the surface the lack
of current in the center would produce no force.

Next term we will discuss the Hall Effect.

The International Telecommunications Union (ITU) has divided the world
into geographic zones for various reasons.

The "Target Areas" of U.S. international broadcasters are ITU zones.

Zones 10-13 are Mexico, Central America, the Caribbean, and northern
South America.

No, configuration of matter and energy changes. By your reasoning the behavior of a four kilogram sphere of plutonium would be the same as that of a four kilogram sphere of aluminum--after all they both obey the same laws of physics.

New York Times

December 1, 2005

Editorial [excerpt]

Plan: We Win

Americans have been clamoring for believable goals in Iraq, but Mr. Bush stuck to his notion of staying until "total victory." His strategy document defines that as an Iraq that "has defeated the terrorists and neutralized the insurgency"; is "peaceful, united, stable, democratic and secure"; and is a partner in the war on terror, an integral part of the international community, and "an engine for regional economic growth and proving the fruits of democratic governance to the region."

That may be the most grandiose set of ambitions for the region since the vision of Nebuchadnezzar's son Belshazzar, who saw the hand writing on the wall. Mr. Bush hates comparisons between Vietnam and Iraq. But after watching the president, we couldn't resist reading Richard Nixon's 1969 Vietnamization speech. Substitute the Iraqi constitutional process for the Paris peace talks, and Mr. Bush's ideas about the Iraqi Army are not much different from Nixon's plans - except Nixon admitted the war was going very badly (which was easier for him to do because he didn't start it), and he was very clear about the risks and huge sacrifices ahead.

A president who seems less in touch with reality than Richard Nixon needs to get out more.

http://www.nytimes.com/2005/12/01/opinion/01thur1.html?hp

...and who is Belshazzar?

Pathetically, Belshazzar was a hollow man. His life was based on a series of bad assumptions about himself. He had a facade of royalty, a name and title that he held on to for dear life. He threw parties that suggested regal authority, he issued commands, spoke of gods, and used religious implements as articles of ridicule and dishonor. He acted as if he was someone important and substantial, but he was none of those things. He was a man who imagined that because he sat on a great throne, he was a great person. He imagined that because thick walls surrounded him, he was safe from harm. He imagined that because he spoke with bravado when drunk, he was brave. But none of those things were true.

Doc Scott's widow needs the money. Last night I heard her begging for cash because donations are way down. She says she can't run the Doc's ministry as he did on only half the donations. Actually, I'm surprised the ministry is getting even half without the Doc. The widow is far less compelling. And I'm sure the true believers can invest their evangelical dollars in far more efficent media than Doc Scott reruns.

In an odd coincidence, last night was the last SW night for the Hour of the Time. The unmemorable guy who took over the show from the late Bill Cooper said, again, freeloaders and lack of donations were the problems.

So, I guess that shows there's no future in the SW Voice from the Grave business. But that's to be expected. After all, that would be like hearing old, stale false predictions from the late Herbert W. Armstrong when we could be listening to brand new false predictions from Prophet Stair.

seriously.... how is this guy able to do this? it seems incredible that
someone hasnt either kicked his ass, put him in jail, or something....

i mean there seem to be enough junior detecetives able to keep track of him.
we have names, addresses, ebay accounts. and the authorities cant do
anything?

so im asking a serious question. whats his secret?

randy

http://www.talkingpointsmemo.com/archives/007148.php

As we know now from the LATimes and the NYTimes, the Pentagon is paying an outfit called the Lincoln Group to plant phony stories in the Iraqi press about just how well things are going in Iraq.

Actually, maybe that's a sign of progress since that's how we seem to be running this place too.

In any case, one graf from today's NYT piece is to choice not to reprint ...

"Even as the State Department and the United States Agency for International Development pay contractors millions of dollars to help train journalists and promote a professional and independent Iraqi media, the Pentagon is paying millions more to the Lincoln Group for work that appears to violate fundamental principles of Western journalism."
I guess if I had a goatee and a black turtle neck I'd call this the internal contradictions of Bush bamboozlement. And perhaps I should.

But while the DOD is hiring the Lincoln Group, the Lincoln is subcontracting the work to BKSH, the PR firm run by Republican uber-operative and spinmeister Charlie Black.

Actually, if you're looking for phony stories about how well things are going in Iraq, I guess a Republican talking head like Charlie Black might be a pretty good better. So this might be an example of shrewd governmnet contracting.

And if you wonder what Charlie Black knows about bamboozling Iraqis, don't worry because he must have picked something up when he was working for Ahmed Chalabi before the war.

Yeah, I heard her whingeing last night too. She's lashing out and blaming the listeners for failing to fulfill their promises. Only 50% of the listeners and 50% of the donations from last year, but costs are still 100%, blah-blah. She had the anger and righteous indignation of her late husband, but little of the persuasiveness. I'm kinda surprised she still has the ministry going, you'd think a rest might give her peace of mind, but it sounded like she was on a one-way trip to both the poorhouse and nuthouse if last night's tirade is any indication.

I have been dialing around the Christian SW stations the past couple days -- always keen to hear signs of the apocalypse -- what happened to Alex Jones' replay on WWCR 3215 at night? There is a religious program and then World Wide Country Music program in his usual slot. I just checked the WWCR website and as of their Nov. 5 update they say Jones should be on that transmitter at that time. Did they drop him? Or is he on a different transmitter?

(I also checked the, ahem, Patriot Radio website listings -- http://www.raven1.net/patriotradio.htm -- and there's no indication there either, they have him listed at the same time & freq.)

Gave us:

>if your argument were correct, multiple parallel strands of magnet wire
>in a xfmr would behave just like litz, and it doesnt.

To a degree, it does. It isn't quite as good as a pure Litz setup,
however...

A single, solid strand of equal Cmils behaves worse than both litz
and multi-filar winding configurations, and skin effect is the reason.

You're a fucking retard. LF mag fields can pass through the planet.
They most certainly can be read right though a coax shield.

Run it through a steel or mu metal pipe, and THEN things change a
bit.

YOU are both false, and retarded. Your ancestry is showing.

I worked for a short time pumping figures into a VAX that "nested"
cut shapes together to minimize material losses in a sheet steel
plasma cutter setup. We had 3 machines, but the last one never
worked. It was a mere 150' feet from the VAX based machine controller
apparatus.

I noticed that the 9 conductor, foil shielded cable they used to
connect to the machine 150' away was draped directly over and snaked
around heavy power conduits that fed some of the high power machinery
being used in the shop (welders, shears, brakes, etc.).

I told them the reason their machine did not work was the routing of
that cable, as the spec for that particular serial line could traverse
much farther than a mere 150'. The noise introduced by the power
conduits was enough to keep the ports from handshaking/establishing a
connection for data transmission.

They bought a new cable, and routed it a bit better, and the machine now functions.

This is why cable TV hard line runs are kept a minimum specific distance away from power lines, both on the poles, and the soft coax in the local installations.

LF fields can pass through both the conduits and the shields. Sure, they attenuate some of it, but why ask for noise by nesting them right next to each other.

Anyway... this proves your point.

That's just nuts! A braided shield's conductors contact each other
throughout their length, and the electrical equivalent length is no
different than that of foil shield.

> Considering the speed of the electrical field in
>the conductor ..... and the distances involved ...
>but the center conductor is shorter than the conductors in
>the braid ...

You're nuts. If they were coated mag wire, you would be closer to
being correct, but braided shield is by design co-conductive elements.

>From The Chicago Sun-Times, 11/30/05:
http://www.suntimes.com/output/quicktakes/cst-nws-qt30.html

Merry Christmas, Dope head.

Rush Limbaugh regarding his in-house promotion to support our troops, in which people can donate Rush 24/7 memberships to soldiers and sailors overseas by paying a reduced price of $49.95 each (down from $59.90):

"The Adopt-A-Soldier Program is just going great guns. We've got over 12,000 donors. I kid you not. I cannot thank you enough -- and I'm going to be matching all these myself so you can double that."

Which means he has taken in about $599,400 so far.

And he will match that by taking another $599,400 from his own pocket.

And putting it in another of his pockets.

While increasing his membership audience by 24,000.

So far.

These wars can be gold mines.

And the losers/ditto dips who believe him.

Name: Rush Limbaugh

http://warrenreports.tpmcafe.com/story/2005/11/28/225327/92

Nov 28, 2005

GOP's broken Contract With America

Ten years ago, the Republican Party seized control of both the House and Senate on promises called the Contract With America.

Over 300 Republican Congressional candidates signed this contract presented on September 27, 1994.

The Contract with America was rooted in 3 core principles:

Accountability: The government is too big and spends too much, and Congress and unelected bureaucrats have become so entrenched to be unresponsive to the public they are supposed to serve. The GOP contract restores accountability to government.

Responsibility: Bigger government and more federal programs usurp personal responsibility from families and individuals. The GOP contract restores a proper balance between government and personal responsibility.

Opportunity: The American Dream is out of the reach of too many families because of burdensome government regulations and harsh tax laws. The GOP contract restores the American dream. From the moment they took control of Congress, the Republicans scrapped their contract.

They promised term limits and scrapped that promise as member after member reneged on promises to serve just six years, claiming that once they've served in Congress, they recognize how important seniority is.

Over 300 Republican Congressional candidates in 1994 promised to serve just six years.

They promised to put an end to "pork barrel" legislation, laden down with non-germane items that had no relation to the original bill.

Then came the transportation bill....

The Republican Contract With America included "The American Dream Restoration Act" but if the American Dream lives, it must live in Shanghai and Bombay.

Manufacturing jobs have been moved to China, and now India is getting, at an accelerating pace, white collar and professional jobs:

call centers, software, IT consulting, chip design, financial analysis, industrial engineering, analytics, drug research, etc.

They promised comprehensive campaign reform.

In 1992, Senator Mitch McConnell of Kentucky led the Republican campaign against political action committee, calling them "whores" and a "plague on society."

After the GOP took control of the Senate, the Republicans installed McConnell as head of the National Senatorial Campaign Committee where he became the champion of PACs and stonewalled any attempts to limit their influence in elections.

Republicans promised to curb spending, then passed the largest deficit spending increases in history

They promised tougher ethics standards and higher moral values.

Then Speaker of the House Newt Gingrich quit amid revelations of an extra-marital affair with a Congressional staffer and his successor never even made it to the job when his dalliances came to light.

Then they gutted the House Ethics Committee to protect scandal-ridden House Majority Leader Tom DeLay now indicted--twice.

Now Republican leader Bill Frist under investigation by the Securities and Exchange Commission.

And there is "Casino Jack" Abramoff's cynical cesspool of conservative corruption.

The conventional wisdom among political pundits and strategists is that if the Democrats capitalize on the GOP's current troubles in the 2006 mid-term elections Democrats are likely to pick up seats just by continuing to hammer at GOP broken promises and corruption.

Does this mean that the Democrats will take back the House in 2006?

Not necessarily.

To engineer a landmark election that dislodges incumbent Republicans and marks a fundamental shift, Democrats have to make themselves the party of change, championing an activist government in service to the common good.

But thats not enough!

Due in large part to partisan gerrymandering, there are far fewer competitive districts now than there were in 1993-94.

This is a fairly significant structural obstacle for the Democrats.

What remains to be seen is whether quality Democratic candidates will feel bold enough to challenge Republicans in districts that are normally considered a "lock" for the GOP.

Not that long ago, Iraq-veteran Paul Hackett came very close to winning a Congressional district that is about as solidly Republican as any in the country.

And since then, the President and his party have only sunk further in the polls.

Democrats considering running for Congress may have taken that election as a sign that, in this political climate, a strong Democratic candidate can win just about anywhere.

If so, the Democrats may be able to mount serious challenges in many more districts than they previously thought possible.

The Democratic party should stop worrying about coming up with their own version of the "Contract with America" and should instead focus on encouraging promising candidates to run in as many districts as possible.

The outcome of the 2006 election will hinge not on what the national party is saying, but on the quality and number of the candidates out in the field.

Reich-wing promises long dead and unfulfilled

Harry.

http://www.kansascity.com/mld/kansascity/news/local/13279940.htm

Taff pleads guilty

Chance of prison looms for former candidate for U.S. Congress

By DIANE CARROLL

The Kansas City Star

Sixteen months ago, Adam Taff was a rising Republican star, a serious contender for a U.S. congressional seat.

On Tuseday, as he pleaded guilty to misusing campaign funds to obtain a home loan, Taff effectively surrendered his political future and prepared for the possibility of prison.

The 40-year-old former Navy fighter pilot pleaded guilty in federal court in Kansas City, Kan., to one count of wire fraud and one count of violating the Federal Election Campaign Act.

In exchange, prosecutors agreed not to push for the maximum sentence.

Whether the plea agreement will keep Taff out of prison remains to be seen.

"One always hopes for that but one also has to be realistic," Taff's attorney, Jim Eisenbrandt, said after the hearing.

Beyond that, Eisenbrandt said, Taff "knows he has disappointed a lot of people and for that he is truly sorry."

Taff declined to comment.

He left the courthouse hand in hand with his wife, Beth.

The two married in April 2004 while Taff was a congressional candidate.

Under sentencing guidelines, Taff could receive up to 30 years in prison and a $1 million fine on the wire fraud charge.

The maximum sentence on the campaign fund charge is five years in prison and a fine up to $250,000.

Another day another Republican scandal. It's endless.

Harry.

True enough! Both editorialized in favor of war. And no-one is more responsible for giving voice to Bush & Cheney's lies than the front page of the New York Times, so, yeah, they are indeed very partisan. Which makes their turnabout all the more remarkable. Thanks for putting into context and reminding us that we should always be skeptical of anything that comes out of the White House and their stenographic press corps.

I think he said he wanted about 1400 bucks.

If I wanted it I would for sure have to sell my Drake R8B or my Harley Softail - and that ain't gonna happen. I don't know (I actually doubt) if the Harris is a better unit than the Drake, although my friend said it was his favorite radio. So there ya go and whaddayathink?

> You're not my 'dx brother' you dumbass brain stem.

D'oh, dxAce stopped laughing. Was a matter hombre? Just yesterday we were both laughing at the corpses and limbs, it of course being friggin' hilarious comedy pathos!! ROTFLMAO!!!!!!!! I suspected the laughter would die down once the Mission was Accomplished or perhaps 2000 dead American boys later, but seriously, this is great stuff, I'm laughing harder than ever. I mean ... "cakewalk" ... dude, I can't stop the cola from snorting outta my nostrils every time I hear that one!! And that grand square in downtown Baghdad that Dick Cheney swore was gonna be named after Lord Bush six months after the war began -- jeezuz man, thigh-slaps around the supper table, my kids think that is the stuff of high comedy classix!! LMAO again -- and again -- and again ...

I did smog tests on ALL kinds of cars, from Pintos to Ferrari's, they all had to have a smog test when they were sold or registered as used in Nevada.

I didn't say they were lousy now, I said they were lousy 25 years ago. The engine build quality was so bad that some of the engines had to be rebuilt almost as soon as they were delivered. Others ran ok, but sucked oil like a wannabe Diesel.

The Ferrari's, Lams, Benzes, Beeemers, and most others would flunk because they failed the tailpipe test, even horrible Fiats. It was a rare Rolls that made it that far! One of the first things you checked was blowby at the oil filler. If it was puffing out of it like a steam loco, it flunked, if it smoked out the exhaust when revved to 2000 RPM, it flunked.

They had nice interiors though..LOL.

Let's not get carried away there, most american cars were plenty crappy,
and didn't run very well. Some of them had engine problems too, like the
infamous GM aluminum 2300 Vega engine. My friend had one that actually
was ok until it hit 50K, and then the oil burning began, and off it
went..

Michael Savage...? Don't you mean Michael Weiner? -- The guy who had all sorts of indiscreet homosexual flings when he was younger, then began to loathe and hate the guy in the mirror so re-invented himself as Michael Savage?? Given that guy's psychopathology and self-loathing, it's not a surprise he was having a meltdown. This is the sort of thing that happens to anti-drug crusading drug-addicts like Rush Limbaugh and cornhole-licking and semen-swallowing homophobes like Michael Wiener.

Nah, just that me and dxAce have a sense of humor, we find the Iraq debacle a rich and never-ending source of great hilarity. Me, I used to think war was a tragedy, but now that warhawks and superpatriots can giggle like little girls about American GIs drowning in quicksand, I say maybe we should all lighten up and join him.

You can look at their editorials from February to April 2003. It's all
there. As far as their front-page coverage, it's remarkable -- and somehwat
peculiar, don't you think? -- that Condi Rice and Dick Cheney would spend
every Sunday morning talk show trumpeting the librul New York Times in-depth
weapons reporting to push their drive to war. It's all on record.

Nah, it's the grieving wives and children of dead GIs that are saddened. If
you are a real patriot, save your pity for them. After all, you're already
paying for it. And will continue to pay for it. As will your children. And
all the interest goes to China. Ni-i-i-i-i-ce!

The Dutch shortwave pirate Alfa Lima International is changeing frequency.
Being normaly in 48 mb around 6265 kc, 19 mb on 15070kc and 13 mb on
21890kc
Now they move to 6925, 15073 and 21860.
Alfa Lima International is always broadcasting in Amplitude modulation and
is very active in the weekend (also at night)
During transmisions they keep an eyeball on the two biggest sw pirates
forums
www.frn.net and www.alfalima.net/forum
also they are often in their chatroom (www.alfalima.net/chatroom) during
transmissions
To get more information about shortwave pirates go and see
http://groups.yahoo.com/group/SWpirates/

I don't read the Times from either coast due to their liberal bias. I don't read or support their web sites either.

All newspapers are generally on the decline because of the poor reporting and bias exhibited in the daily print. The newspapers used to have a lock on reporting the news so the general public was ignorant of this fact but not anymore. AM broadcast talk radio, AM radio news, the Internet and satellite have become alternate sources of news reporting and commentary.

In the past unless you had a short-wave radio you did not really understand what was going on out in the world. All you had was the newspapers and their slant. The three networked TV and radio news was mostly in lock step with the newspapers and you would get the same story from them. Short-wave was the only way you could hear what other countries had to say about events or about the USA "directly" without the newspapers filtering what they had to say but only the short-wave listening crowd had that ability.

Not only did I listen to Russia, Red China and other communist countries SW broadcasts I also used to read their news network over short-wave with a Universal RTTY decoder. Listening to their networked news their main object was to nuke if necessary then over run the USA, Israel, Vietnam, South Korea and basically just grind us into the dust. The USA was evil and deserved whatever it had coming to it. The total defeat and occupation of the USA was was the goal all the communists countries worked toward and that is still their objective today. You did not hear ANY of this strident talk reported in the main stream media until recently.

Today people have more of these alternate sources to compare to the newsprint and are rejecting the poor reporting and bias in reporting the news and the general public has also rejected to greater degree the biased commentary about the news. Since a greater percentage of the population have other sources to compare the print reporters "take" on the news than just short-wave radio more and more people are becoming aware of the media bias and are rejecting that bias.

The East and West coast Times have not learned their lesson that they no longer have a lock on the news reporting and will continue to decline.

Connecticut Democrat Joe Lieberman, who just returned from Iraq, defended
U.S. efforts there in Tuesday's Wall Street Journal and a subsequent news
conference on Capitol Hill, saying the military has "a good plan" for
victory in Iraq, that progress is "visible and practical" and warning that
such progress could be turned back by a premature withdrawal.
But the major media that played up Democratic Rep. John Murtha's call for
withdrawing U.S. troops largely ignored Lieberman's remarks. Neither ABC nor
CBS mentioned the senator in their nightly newscasts while NBC aired a short
sound byte. And The Washington Post, New York Times, and USA Today ran not a
word of Lieberman's praise for U.S. efforts in Iraq.

6925 might not be such a good choice as it's a regular NA pirate channel.

That in itself is pretty hilarious! When HUGE crimes like Slick Willie's blue dress is an impeachable offense, the website is pulsatingly active. But curiously, when trifling little matters like WMD don't show up and thousands of boys are shipped back to America in pine boxes and the Downing Street memo gets published, well, that's all small fry frivolity, so the Patriotist goes dormant. Why am I not surprised? O, 'cos I'm a 'tard, that's why!! And luvin' it!!!!

All good points. But of course, none of that stopped Dick Cheney from using the librul NYT every Sunday to push his war while at the same time sweeping CIA doubts under the rug. Doesn't anybody else think it odd that a Republican White House would prioritize and herald intelligence from anonymous sources printed in the librul New York Times over it's own CIA has a problem? Or is it just another awesome punchline for us to laugh our heads off?

And the return path is the air. You can see it. It looks like lightning.

Otherwise, you just have a capacitor, and it's gonna get full. There
has to be a return path, or no current will flow, period. OK, technically,
while the capacitor is charging, there's some current, but it stops, and
when there finally is a path, the charge just flows back to where it
was.

Cheers!
Rich

> Lieberman's praise for U.S. efforts in Iraq.

Joe Lieberman appears to be one of a handful of elected Democrats that
will stick to principle over party. He is one of the few Democrat
Senators I trust to speak the truth or do the right thing.

I trust ABC, NBC or CBS News will spin the story just like the East or
West coast Times. These organizations are all of the same liberal ilk,
which is why they are on the decline.

Nah, we're buddies on this, we both get our jollies laughing at the war. I concede, I don't get a stiff woody when I see flagged-draped coffins the way you do, but we both share the same affectionate guffaws and chuckles. Good for the soul, bro-in-arm!!

...And the facts!!

Time magazine Baghdad Bureau Chief Michael Ware, just the other day:

"I and some other journalists had lunch with Senator Joe Lieberman the other day and we listened to him talking about Iraq. Either Senator Lieberman is so divorced from reality that he's completely lost the plot or he knows he's spinning a line. Because one of my colleagues turned to me in the middle of this lunch and said he's not talking about any country I've ever been to and yet he was talking about Iraq, the very country where we were sitting."

> He is one of the few Democrat
> Senators I trust to speak the truth or do the right thing.

Yeah, he speaks the Bush truth (ie. "There can be no doubt") and the Bush right thing (ie. "We must not be nation-builders," Mr. Bush told LOSERman's running-mate in the 2000 election debates).

> I trust ABC, NBC or CBS News

There ya go again, putting your trust in the librul media. How many times can they trot out Mr. Bush's war lies and excuses before exercising some skepticism??

will spin the story just like the East or

In general I agree that NiMH's are great, but I've observed in
some classes of service that they have high quiescant leakage...don't
store charge well with no load. This is real annoying in camera service
because a fully charged set of batteries will discrage themselves enough
in two weeks that I have made a practice of fully charging both battery
pack the day before I want to use my camera. They tell me LiPo's don't
have this problem.

Even the New York Liberal Times didn't say "phony stories". Where did
you find this raving lunatic? The Daily Worker? Was he walking the
street, yelling, "workers of the world unite, you have nothing to lose
but your chains!"?

How much clearer can it be? If you don't do what they tell you to do,
they will sneak up on your back and do you serious harm.

>One said "10-13"

Get a hold of the international broadcast regulations. (www.fcc.gov, or
access.gpo.gov and look for the National Archives web pages and look for
"Code of Federal Regulation"). Last I knew, this would be "47 CFR Part
73 Subpart F". One page of this is a world map with the target regions.

dig,dig...

<http://www.access.gpo.gov/nara/cfr/waisidx_04/47cfr73_04.html>
and download the .pdf for 73.703

>Also, does "Azimuth" tell you where they are beaming their antenna to?
>
>This one said 75.0 & 100.0. How do you interpret that?

The map, (and another poster), indicates those are Central and South
America. But using 0=North, 90=East doesnt' make sense unless the
transmitter is out in the Pacific somewhere. There should be a
latitude/longitude in the database, too, that should give a doublecheck.

Thanks, I will look into this. Meanwhile, who really funds this
website?

>Since you didnt seem to latch on to it here it is for you.

terrorize
v 1: coerce by violence or with threats [syn: terrorise]
2: fill with terror; frighten greatly [syn: terrify, terrorise] <

I agree with neither of these as appropriate tactics.

Having said this, it is then up to people to argue as to whether
specific actions constitute "terrorism." We may have differences of
opinion. Using explosives on labs definitely qualifies, as it raises
questions in the minds of owners and workers whether or not they could
be targeted during working hours. OTOH, mechanical destruction of
cages or abusive equipment does not, since the act and the result pose
no threat to the physical well-being of any worker.

I am not saying it isn't a crime - but it isn't terrorism.

LMFAO

It's not an assumption, it's simply reality.

Like I said, stop worrying and get over it.

244. Maritime Monitoring: Simplex and Duplex Questions

Newsgroup: rec.radio.shortwave

Hello:

Have never gotten into monitoring any Maritime HF voice communications, but thought it might be interesting, so let
me ask, please, a few really basic questions.

Ship to shore and shore to ship voice and phone comms: are these (usually) via simplex or duplex channels ?

If both, who uses what, etc. ?

Any good frequencies to try ? Usually USB ?

Guess I would prefer to hear both sides of a conversation, if possible, so would prefer to
try duplex used freq's (at least initially)

How about C.G. VHF: are these simplex or duplex usually ?

Thanks,
Bob

Ok, I give up, where the hell is Stadtmiller's show? Brother Stair is on the time slot now, WTF?

I see, Alex is on 3.210 for years (3.215 now), then suddenly (to quote Emeril from the Food Network), BAM, he's put on 5765 Khz. Too bad you can't hear that frequency in Pittsburgh.

Stadtmiller is on 12.160, going to 5.070 at 6:00 PM Eastern. Suddenly, BAM, he's put on 11.925 for both hours. Too bad you can't hear the show in Pittsburgh. It moves to 5.050 for the second hour, yes, I can hear the show, so I tune in today and Brother Freakin Stair is babling away, half way through the week they suddenly decide that Brother Stair is to have this time slot?

Also, the shows that have vacated the above frequencies have been replaced, in part, by shows that offer the opposite of what the displaced shows endeavored to do.

I see, the war was bad but now the war is good. This administration is a religious administration. (yes, and the pope does shit in the woods). Government contractors have the best interest of the U.S. citizens in mind when it comes to billing the government for their services. Sure.

Dr. Artaud

Dec 1, 4:20 PM EST

Two U.S. Allies Leaving Iraq, More May Go

By WILLIAM J. KOLE
Associated Press Writer

VIENNA, Austria (AP) -- Two of America's allies in Iraq are withdrawing forces this month and a half-dozen others are debating possible pullouts or reductions, increasing pressure on Washington as calls mount to bring home U.S. troops.

Bulgaria and Ukraine will begin withdrawing their combined 1,250 troops by mid-December. If Australia, Britain, Italy, Japan, Poland and South Korea reduce or recall their personnel, more than half of the non-American forces in Iraq could be gone by next summer.

Japan and South Korea help with reconstruction, but Britain and Australia provide substantial support forces and Italy and Poland train Iraqi troops and police. Their exodus would deal a blow to American efforts to prepare Iraqis to take over the most dangerous peacekeeping tasks and craft an eventual U.S. exit strategy.

"The vibrations of unease from within the United States clearly have an impact on public opinion elsewhere," said Terence Taylor of the International Institute for Strategic Studies in Washington. "Public opinion in many of these countries is heavily divided."

Although the nearly 160,000-member U.S. force in Iraq dwarfs the second-largest contingent - Britain's 8,000 in Iraq and 2,000 elsewhere in the Gulf region - its support has shrunk substantially.

In the months after the March 2003 invasion, the multinational force numbered about 300,000 soldiers from 38 countries. That figure is now just under 24,000 mostly non-combat personnel from 27 countries. The coalition has steadily unraveled as the death toll rises and angry publics clamor for troops to leave.

In the spring, the Netherlands had 1,400 troops in Iraq. Today, there are 19, including a lone Dutch soldier in Baghdad.

Ukraine's remaining 876 troops in Iraq are due home by Dec. 31, fulfilling a campaign pledge by President Viktor Yushchenko. Bulgaria is pulling out its 380 troops after Dec. 15 parliamentary elections, Defense Minister Veselin

Bliznakov said.

In his strategy for Iraq, announced Wednesday, President Bush said expanding international support was one of his goals. He also seemed to address the issue of more allies withdrawing.

"As our posture changes over time, so too will the posture of our coalition partners," the document says. "We and the Iraqis must work with them to coordinate our efforts, helping Iraq to consolidate and secure its gains on many different fronts."

Struggling to shore up the coalition, Bush stopped in Mongolia on his recent Asia trip and praised its force of about 120 soldiers in Iraq as "fearless warriors."

At least 2,109 U.S. service personnel have died since the beginning of the Iraq war, according to an Associated Press count. At least 200 troops from other countries also have died, including 98 from Britain. Other tolls: Italy, 27; Ukraine, 18; Poland, 17; Bulgaria, 13; Spain, 11; Slovakia, three; Denmark, El Salvador, Estonia, Netherlands, Thailand, two each; Hungary, Kazakhstan, Latvia, one each.

Underscoring mounting opposition in nearly all coalition countries, a poll published in Japan's Asahi newspaper this week showed 69 percent of respondents opposed extending the mission, up from 55 percent in January. No margin of error was given.

Japan's Kyodo News service reported Wednesday that Prime Minister Junichiro Koizumi's Cabinet would decide Dec. 8 to allow its 600 troops to stay for another year, but it could decide later to withdraw troops around May.

A British drawdown would be the most dramatic.

Although Prime Minister Tony Blair's government insists there is no timetable and British forces will leave only when Iraqi troops can take over, Defense Secretary John Reid suggested last month that a pullout could begin "in the course of the next year."

South Korea, the second-largest coalition partner after Britain, is expected to withdraw about 1,000 of its 3,200 troops in the first half of 2006. The National Assembly is likely to vote on the matter this month.

Italy's military reportedly is preparing to give parliament a timetable for a proposed withdrawal of its 2,800 troops. Premier Silvio Berlusconi's government has said it plans to withdraw forces in groups of 300, but in accordance with the Iraqi government and coalition allies.

Poland's former leftist government, which lost Sept. 25 elections, had planned to withdraw its 1,400 troops in January. The new defense minister, Radek Sikorski, visits Washington this weekend for talks on Poland's coalition plans, and the new government is expected to decide by mid-December whether to extend its mission beyond Dec. 31.

"Some formula of advisory-stabilizing mission could remain on a smaller scale, of course, and our commanders are prepared for several variants," Col. Zdzislaw Gnatowski of the Polish army's general staff told The Associated Press.

Air Chief Marshal Angus Houston, head of the Australian Defense Force, has said about 450 troops in the southern province of Muthanna could leave by May. Australia has about 900 troops and support staff across Iraq.

Many coalition members have pledged to stay in Iraq for all of 2006; at least one, Lithuania, has committed to the end of 2007. And the coalition is still drawing new members, most recently Bosnia, which sent 36 bomb-disposal experts in June.

"We are getting letters of gratitude from the U.S. commanders for our peacekeepers' excellent service," said Ilgar Verdiyev, a Defense Ministry spokesman in Azerbaijan, which has 150 troops in Iraq and is one of the few mostly Muslim countries to contribute.

Associated Press writers Vladimir Isachenkov in Moscow and Ryan Lucas in Warsaw, Poland, contributed to this report.

Hello:

Thanks for link.

Boy, am I a true newbie at this.

Confused over the terminology, I think.

I thought that duplex usage meant both sides of a conversation weere on one
frequency, and simplex that the Tx and Rx portions were ontwo separate
frequencies. But, i guess I have it wrong ?

There are probably a lot of nuances with this that I don't even know to ask.

Can you, perhaps, clarify some of this for me ?

Much thanks; appreciate it.

Bob

If it were me...I would not look at a pro grade receiver unless it was really cheap. Chances are it has had the living xxxx run out of it when in use by the original owner.
Also, remember that it was not designed for the casual SWL who likes a lot of memories and features built into a small lightweight high performance box. The Drake is at least all of that and more. The Harris is a 40 pound rack mount receiver designed for lab work and field monitoring.

If you set the two receivers side-by-side and ran A/B tests with the same antenna I'd bet money you will hear the same stations on both.

Yup, that freq is mostly useless up here too. But we do get World Wide
Country Music in it's place, which is just awesome, because it's nigh
impossible to hear country music anywhere else on any dial, thank goodness
for WWCR!!

America's Zenith occurred on Dec. 8th, 1941 when America harnessed her resources to beat the supreme shit out of THREE countries in 44 months.

I don't see that kind of resolve within today's population of Liberal Neo-Kommie FAGGOTS.

My ATS 909 hates NiMH's in fours ...demands fully capable alkalines's voltage. Alkalines voltage drop after use to a certain figure that normally would be useable in most radios and the sangean shuts down.

I got a six cell battery holder and ran it to the external battery connector. And six high capacity NiMH AA's work the radio fine. it seems to tolerate a 1.2v overvolt because it's heavy current demand drops that voltage to a 6 volt figure pretty quickly

Is there some reason why one wouldn't use lithium batteries? More expensive, but they certainly last a lot longer than alkalines in most uses...and nowadays they come in AA size.

news:11ov71ue0ec1p9f@corp.supernews.com:

How many body parts have you sacrificed for your country? Isn't it nice
living in a country whose claim to fame is destroying other countries?

Regardless of the Liberal Neo-Kommie Faggots, the point is that they had
industries back in 1941 that enabled the U.S. to seriously contribute to
the "war effort". Next time you visit the store, notice all of the items
that are embossed "made in China". I guess you and others of your ilk
believe that the U.S. will engage in a war with China one day while
simultaneously buying their supplies from them. Nope, not likely. The
days of the U.S. "beating the shit" out of other countries has gone the
way of the Victrola.

Sure, we do well against countries in the desert with no tangible
military, and no satellites, but will we always do so well against all
countries? Not so likely.

My 2 cents worth would be to throw the illegal aliens out of the country,
bring the U.S. soldiers home, and stop financially and technologically
building what is likely to become our most formidable enemy to date, ergo
the Chinese. We don't need $19 DVDs, or $300 Computers, they can be made
in the U.S. You will pay more but the neighborhood that you are living in
is less likely to become a ghetto since people will have jobs.

I tried to post a mention of a very odd feedline called the "G-line"
Two attempts and google ate both of them.

It is a true single conductor UHF feedline.
It isn't perfect, but has a low loss.
It "leaks" and in some situaiton that is a benifit.

See:
<http://w5jgv.com/1970_tower/tower.htm>
<http://www.broadcast.net/pipermail/radio-tech/2004-February/049867.html>

I have used the damn things, they can't work, but they do.
They work very well.
I still don't believe in them.
But since they do appear to work I will pretend to believe in them.

Before flaming me, so some net research.
+"G-line" +"antenna"

Terry

> frequencies. But, i guess I have it wrong ?

Duplex merely means the ability to send and receive simultaneously. Simplex means alternating send and receive.

One could duplex the same frequency by using time division multiplex, i.e., alternately sending and receiving fast enough that it appears to be simultaneous, but that is not do-able with conventional equipment nor common. And simplex send and receive frequencies do not have to be the same but can be. That's to say that the terms duplex and simplex do not inherently define the number of frequencies but it is common in hf that duplex will use different frequencies and simplex a single one.

Sitting here listening to the USSR on shortwave drinking FREE WINE.....I did a favor for a local vinyard operator and now have over 1200 bottles of assorted wines!

What did I do?

I saved his dog by rushing it to the vet when it got hit in front of my house while he was out of town

He paid the vet bill.....3000$ and he gave me 1200 bottles of primo Vino!

Be kind to animals!

LOL!~

Source record: 52354

The use of primary or secondary cells depends on how the product was engineered Primary cells start out at 1.5V and are considered at the end of life at around 0.5V. To engineer a device where the power supply voltage varies either a DC/DC converter or LDO (low drop out) voltage regulator. It takes a great deal of engineering to run a radio with a DC/DC onboard. Not impossible, but you need to watch where the harmonics of the DC/DC end up. The LDO is quite simple, but not very efficient.

The secondary cells start out at around 1.25V and are considered at end of charge around 1V. If you are charging the batteries in the device, the voltage per cell can be around 1.5V. [It all depends on how fast you charge them.] This yields a range of 1.5V to 1V per cell. What most engineers would do is go for the LDO, with the output near the 1V/cell limit. Thus many products that spec primary cells work just fine with secondary cells with one caveat: the cheaper devices have no undervoltage lockout to protect the secondary cells from a deep discharge. Some products use battery holders for each type of cell so that the product knows what kind of batteries are being used.

Nicads and NiMH have lower impedance than alkaline cells. You often find them specified for products that have high current surges. [Photo flashes, motor winders, etc.]

NiMH has a higher self-discharge than nicads. I used to really hate NiMH, but have finally gone that route once the Rayovac 15 minute chargable cells came out.

Getting back to your original question, the answer is "it depends."

297. Colder Winters

Newsgroup: rec.radio.shortwave
Date: 2005-12-02 04:02:16 UTC
From: "http://www.lookaboutusa.com/" <nswamfm@yahoo.com>
Message-ID: <1133496136.086721.232900@g49g2000cwa.googlegroups.com>
Source record: 52356

The warm currents from the tropics that sweep north along the eastern coast
of the US and Canada have slowed 30% since 1992. The change may presage

colder winters for the north-east of North America and Europe.

Not to mention the more violent storms the extra heat in the mid-lattitude
atmosphere will create.

Extract:

"The Atlantic conveyor carries deep cold water from the Arctic down south to
the equator and returns to the north warm water, which is close to the surface."

"If the Atlantic Ocean is moving less heat northwards, then the atmosphere
must take up the slack to keep the tropics-to-poles system balanced. McBean
said the most likely way for this to happen would be an increase in violent
storms in the area from the mid-United States to mid-Canada."

......

Disruption of the Atlantic conveyor had been widely predicted.

A report from the U.S. defence department earlier this year noted the
consequences of a slowdown in the Atlantic conveyor, saying that the
climate of Britain and northern Europe would be more like Siberia's and the
average rainfall would decline by 30 per cent.

But yesterday's report conducted by a research team from Britain's National
Oceanography Centre found the first hard evidence for the change after
comparing temperature and salinity readings from last year to four previous
snapshots dating back to 1957 ? all recorded by monitoring devices along a
line from Morocco to Miami.

Measurements in 1981 and 1992 had shown little change from the readings of
1957.

Get help, you alcoholic scum.

Tracy Fort's drunkenness, necrophilia and a deceased seventy two year
old cancer victim, who happened to be my mother:

==========
==========
I'm not drunk. I haven't finished my first 12 pak yet.
I'll get there and when I do it's back to the cemetary.

She gives great cancerous BJ's.....thanks Canucky boy!

haha...thanks.....gotta go grab another beer.

You and your dead ass mom might be interested in the last post I made.

How far north did the Katrina effect? I saw someone's mom floatin down
the mighty Mississippi!

Dug her ass right up! She was too damn ugly to have sex with before
she died. The old bag o bones fell apart in my hands! She didn't
complain about much either other than the lousy sex she got from those
foursomes with you, Mike and her husband.

love dem bones....dem bones....dem bones

Hey Mike! Please come over and lick my ass! Me so Horney! I want
to take my tounge and run it in and out your anus and taste your
creamy chocolate goo upon my lips. Man am I hot!

I have your mom's legbone right here. I kept it as a momento ya know.

rattllin' bones!

squeek...squeek...

Skeleton rides 50 cents a pop! If you can stand the smell....I wonder
is she stunk that bad in life?

hahahaha....I'm still laughin' at your sorry ass family! This is funny
stuff!

She is very fresh but not that fresh!

hehe...I love dem bony women....rotten to the core.....

um...umm....good!

I love it....did she do it for you too?

Please accept my apology for abusing her. I'm sorry that I did not
toss her back into the black depths that she came from. Next time,I
will be sure to take care of that. I promise that I will refill the
hole with the dirt that came out too. In addition, I will re sod the
plot at no additional charge. Let me also apologize for the milky
substance in her left eye socket, that was an unavoidable accident.
please feel free to include this post in your sig file!

You might as weel keep it up there...I love the ole boney bitch!

Dem Bones! Dem Bones! Dem Bones! I loved playing dem Bones!
Dem Bones! Dem Bones! Dem Bones!
I loved playing dem Bones! I ran my fingers uo and down dem bones and
she began to come alive!
I played dem bones like they never been played and she smiled for me all
the day.

Pork and bones....

DON'T HURT CANADA! I'll miss those nights with the ole bony lady!

The most fun I ever had!

Sporting a new moniker (GraveDigger) just for you and mommy...

He knows the inside of his mom's boney butt! hahahaha

hahahahaha......Can't you come up with your own material?

hahahaha.....when you got thru lickin I was stickin.....

Haha...I laugh eveytime I read my great material! Keep postin

This .sig file will continue until Mister Fort posts a sincere apology
to all cancer victims and their families. His refusal to do so says
more about his attitude and upbringing than any of his thoughtless and
hurtful postings in rec.radio.shortwave. He seems to be very proud of
the fact that he can buy expensive radios using the refunded deposit
money from his empty beer containers and has frequently posted the fact.

It appears he is well on his way to purchasing his next radio. Anyone caring about his well-being should mention the good work of Alcoholics Anonymous to him. They may be able to help him restore his self respect and dignity so he stops posting this drunken garbage on the internet.

I wonder if his wife and children know what their Hero does at night.

For a modern computer, it is. One needs to be a good programmer to
write a good nesting application though. Hell, it was on hercules
graphics at the time!

> What methods were used? Software? With what economic
>success, compared to perfect?

Oh it was a tried and true HVAC industry package. I do not recall
the name of the software as I was strictly involved with breaking down
the individual pieces into their constituent cutouts. Once that was
done, the figures for their shapes were input by me and when done, the
nesting program did the rest. A machine operator loaded the plasma
cutter, and losses were less than 55 per 4' x 8' sheet. It was nearly
always stainless.

As far as I know, there was no method used by a human that could do
the job with less losses. I am certain that nesting software has come
even farther since... it isn't all that involved.

It was a Vax/Vms desktop PC, and I think it was dated out to the mid
80's as/and the I/O module was 100 wire wrap. It used standard serial
RS-232 ports. The forms created were for HVAC. Almost always 100%
fully welded stainless as the mainstay of their business was
institutional, hospital, dust collection, jails, etc.

It was an interesting job. Well beneath my capacity, however. It
was... after all, a mere data entry position essentially.

When I brought the interface problem to their attention, I likely
saved them gobs-O-cash because their volume required that that third
machine get running. I probably stepped on some toes when I solved it
for them... a mere data entry dude. Didn't even get a pat on the
back.

As you guys have so wisely digressed into superfluity, you have been
missing the point of the original post.

Tonight, neither John Stadtmiller, Jack McLamb, nor Alex Jones were on at
all, let alone during their designated times. Odd, isn't it, the 1st of
December and all of a sudden there is a purge of Patriot Broadcasters.

None of their pages mentions anything about the shows being off the air,
nothing on the shows before today would lead one to believe that the
shows would be off the air, yet they all are off the air.

Happy happy, Brother Stair has been brought to fill in some of the
vacancies, and other religious shows to fill the others.

None of you guys see this as a problem, the unannounced alteration of the
broadcast schedule, with religious programming being the substitute.

Something is not right here.

Dr. Artaud

The separation of CATV, Phone, and the secondaries on power poles is
to reduce the chance of additional damage when a line breaks, and to
provide enough room to service the line mounted equipment with
reasonable safety. If they are too close together and a line is damaged
it can short to the jacket of the CATV or telephone lines, although the
old leaded phone cables and bare aluminum CATV cable are disappearing.

The separation does very little to avoid damage when a power
line breaks. It does avoid damage when the CATV or telco cable
breaks. None of those are common problems though. The
separation is mostly to allow 1) acess by craft people to the
CATV/telcom cables, 2) reduction of induced power line noise,
and 3) provide lightening protection to the CATV/telco cables.

(You will be *very* hard pressed to find any lead sheathed telco
cable still in service today.)

Yep, 7390 is a mighty 500,000 candles.
for a bit more of a DX challenge why don't you try 3345 Khz which is only 100,000 watts.
and for a further DX test try R. Sonder Grense (radio across borders) on 3320, 7185 and 9650 Khz, all in Afrikaans language.
These are 100,000 watt TX's.
Have fun

No. The parts were standard HVAC reducers, elbows, etc.

So, the shapes were quite varied and more than mere rectangles.

Perhaps what I should have said is that such software has *not* come
much farther since. That makes better since, as it is likely not all
that involved.

Since I do not know, however, it is mere speculation.

I do not think the shapes were anything other than "the general
case". The only difference being that fully welded parts do not have
the same flanges, etc. at their seams, like non welded HVAC parts do.

I wasn't really there long enough to take in all that much knowledge
in the matter. I moved on to bigger and better things.

I did wonder if folks like Milacron, in the same town had such
programs running. It would only seem prudent to save material costs.

Which is why also that such services will always be found BELOW
power.

CATV hard line also always has a nice, big GROUNDED "carrier strand"
from which the lines hang, as does ma bell IIRC.

Once at the "service drop" level, power run avoidance is certainly
for noise minimization. Like traversing across an attic or crawl
space. We had to keep a minimum of 18" between any comm run and
power. Most such runs were horizontally spaced in post wire settings.

In a pre-wired structure, with vertically spaced runs, I am sure
spacing was for keeping AC power line noise injection to a minimum as
well. Particularly in residential structures where both power and
comm runs are not found in conduits, and "line breaks" are not very
likely at all. When they do occur, said lines do not fall onto each
other when they are supported from stud to stud to stud.

So on the poles, noise abatement/minimization *may* not be the
primary reason, but it certainly is in structures.

Ok...I will be in touch with the reviewer of that radio and get back to you soon.

As a help for the future, if you can put the word Radio somewhere in the subject line of anything coming to radiointel email, it will help a lot. It is a challenge to figure out what is spam sometimes and what is not. I am sure legitimate emails sometimes either get lost in the spam or get deleted if one of us can't tell if it is legit.

We like mail!

Thanks

Given the flame feast over twisted feedlines I thought it might be
usefull to
post a couple of links to some good, and accurate, information on coax
cable.

Coax isn't perfect. It has losses and doesn't provide complete, as in
100%,
shielding. But in my experience it is the best feedline choice for
99.9%
of antenna to receiver.

The first is a overview:
<http://www.tennadyne.com/founder_commentary.htm>

The second is a pdf reprint of a QST article.
<http://www.tennadyne.com/pdf/coaxial_tenn.pdf>

Hopefully science will displace superstition

I am still trying to recover my old bookmarks to a complete, ie
rigorous,
ie hairy mathmatical study of coax twisted and parallel line
charactoristics.

Enjoy

344. IEEE study on twisted pair.

Newsgroup: rec.radio.shortwave
Date: 2005-12-02 13:59:51 UTC
From: r2000swler@hotmail.com
Message-ID: <1133531991.248469.262960@g43g2000cwa.googlegroups.com>
Source record: 52403

For a moderatly complete study of twisted pair ingress/egress see:

<http://www.comsoc.org/sac/private/2002/june/pdf/20jsac05-stolle.pdf#search='twisted%20pair%20ingress'>

Get those calulators out.

Please note that this studies much higher levels of "RF" then the
typical SW receiver will be
"see". So what is acceptable for a networking or telco environment, may
not be acceptable
for a receiving use.

A comparison betweent the details int his link and the coax link:
<http://www.tennadyne.com/pdf/coaxial_tenn.pdf>>
could be educational.

Or maybe not, after all some people still insist the world is flat.....

Enjoy!

Terry

Suppose,just suppose,you have your high end very high dollar Shortwave Radio all hooked up and turned on and something happens to break your antenna connection.Would that cause some damage to the Radio,especially if the Radio is computer controlled?

So... has anyone here ever heard read on air a letter that he/she sent in to a shortwave broadcaster? You know, on one of those Mail Call type programs... It has never happened for me, although once upon a time (about a decade and a half back) I used to send in reception reports occasionally.

If you've not ever heard your own letter read on air, have you ever heard read the letter of someone whom you know? For instance, were you ever listening to, say, Radio Canada Int'l when they suddenly announced, "and our good friend ____ ____ in the U.S. writes, 'Hello my Canadian friends, I listen to your programming quite regularly for its refreshing content and....' " (fill in the blank, of course, with the name of the someone you know).

Ever happened? Not for me, but maybe I just don't listen to these letter programs regularly enough.

Way back when, early- to mid-70's, I had letters read on Charles Gursky and Lynn Henderson's Sunday AM show on Radio Canada International (a reception report with additional friendly notes); on Keith Glover's Radio Australia Sunday AM mailbag show (Keith was a great guy, God rest his soul); and on His & Hers, Jerry and Dody Cowan's Radio Nederland program on Wednesday nights IIRC (this last was my all-time favorite radio show on SW, of a variety which really isn't around any more).

In fact, for a brief period Radio Canada had a gimmicky program (probably on the Gursky and Henderson segment) where, if you asked, they'd call you on the phone and let you ask a question about Canada on the air - recorded, not live. I did this once, and it was a silly thrill to hear my own voice on 5970 kHz. I lament that I forget what the question was...but if I remember it, I'll let y'all know.

I remember being shocked once when, on their program, Charles and Lynn were discussing a letter about accumulating stuff in one's household, and Charles used the phrase "damnedest collection" on the air - the first time I'd heard language that was so colloquial on the broadcast medium. Of course, now many people get upset if they don't hear at least one four-letter word every minute or so...

It seems like the best opportunities these days is either on Voice of Russia or Radio Japan - the Japanese letter people just seem so excited whenever they read a letter, it's very cute...

That's a good solution. It also keeps you from having to stress the weak battery hatch as much....a part waiting to break. For mine, I bought a 4-D cell holder and I use that via the DC input jack when I go battery power. The 909 / 398 is a nice radio in many ways, but for the battery drain and the "deaf whip." I have always considered this to be a lousy portable for those reasons but a nice mini-desktop with external antenna and AC power.

There may actually be value in going this way. Depends on if the % life improvement exceeds the cost difference of course. One thing to know about lithium....they pretty much provide full power and then crash on you. Alkaline, on the other hand, tends to die gradually. It is harder to know when you are losing power with lithium...however performance holds together better during its life.

>Just what constitutes "abuse equipment"? <

Well, there are lots of examples - pictures too - but short of setting all of those forth in URLs which are easily obtainable with a websearch, I will say that some of the most egregious are those for deposting bleach and other strong chemicals into the eyes of constrained small animals - while they are conscious - likewise mechanisms for forcing same chemicals into their stomachs until they burn from the inside out; and various torture-like devices for use on monkeys to hold them in various extremely uncomfortable positions while they can be stabbed, vivisected and electrocuted - all while alive and conscious.

The list goes on, and these things can be found in every animal industry.

Not so. See the list of three reasons below? 1 and 3 are the
reasons to put CATV and comm cable below the power cable.

>CATV hard line also always has a nice, big GROUNDED "carrier strand"
>from which the lines hang, as does ma bell IIRC.

As does virtually all aerial cable. (Check out the construction
of power cable too!)

>> It does avoid damage when the CATV or telco cable
>>breaks. None of those are common problems though. The

Pilot Reports 'Missile' Fired at Jetliner Near LAX (11/28/05)

FBI agents and Homeland Security officials spent the weekend investigating the report of a possible missile fired at an American Airlines plane taking off from Los Angeles International Airport. Sources tell ABC News the pilot of American Airlines Flight 621, en route to Chicago, radioed air traffic controllers after takeoff from LAX. He told them a missile had been fired at the aircraft and missed.

The plane was over water when the pilot said he saw a smoke trail pass by the cockpit.

FBI agents believe it was a flare or a bottle rocket, but say they may never know if that's what it actually was.

My devices have battery icons of some kind. I replace my NiMHs at
50%. If the device has 2 positions like my Sony Walkman I replace
when the icon shows half a battery. If it's 4 vertical bars like my
Zen Nano I change at 2. For my old camera and my Casio TV, I always
carry a freshly charged spare set.

The K7RA Solar Update

SEATTLE, WA, Dec 2, 2005--Daily sunspot and solar flux averages over the past week were down, and the geomagnetic indices were up. Average daily sunspot numbers were down nearly 15 points to 33.7, and average daily solar flux declined nearly 13 points to 84.2.

Currently sunspot and solar flux numbers are rising due to Sunspot 826, which is growing rapidly and moving toward the center of the solar disk, giving it maximum influence here on Earth. It also could be a source of flares, which would not be good for the ARRL 160 Meter CW Contest this weekend. Predicted solar flux for Friday through Monday, December 2-5, is 100, 105, 105 and 105. Predicted planetary A index for the same days is 15, 12, 8 and 5, although those numbers will be higher if Sunspot 826 becomes especially active.

The November 18 edition of the "Solar Update" included a report describing how WB5AGZ in Stillwater, Oklahoma, heard a 10-meter repeater from New York (KQ2H) during the middle of the night and into early morning. We now have another similar report, also from Oklahoma. Stan Stephens, WA6SKD, of Midwest City, wrote in with this narrative:

"I would like to confirm Martin McCormick's (WB5AGZ) observations from Stillwater,
Oklahoma on late night 10 meter FM signals from KQ2H on 29.620 MHz. I monitor
the 10 meter FM band always looking for a contact or two, since I am a night owl. I
have observed KQ2H many times after midnight, almost too numerous to keep track.
These openings have not just been this month, but also spring and summer. What I
hear does sound like a link with stations having no idea they are being copied 59+ in
Oklahoma.

"Now for the good part. These late night signals are not limited to KQ2H. I have also
noted signals from the southern US and Midwest with an occasional California 10
meter FM repeater. Also, like Martin, I notice no other signals on 10, 12, 15 and 18
meters. Trying to raise these repeaters can be difficult on my Azden PCS

2800 (10 W
and Ringo), but when I do get a response from the machine, no one is
home!

"In general I find the 10 meter FM band is open a lot more than it is
given credit for. I
am not sure what conditions allow this, but no complaints on this end.
It is cool
making a 10 meter FM contact with a distant station at 0300. I have been
on 10 FM
with my Azden for 23 years; my log books really show varied conditions
on 10 meter
FM. Although some years have been better than others, this includes
sunspot cycle
minimums.

This is very interesting, and shows us that 10 meters may be open more often
than we think,
even in the middle of the night when there shouldn't be any conventional
propagation.
Remember that the ARRL 10 Meter Contest is coming up December 9-11.

Now that November is behind us, let's look at the monthly averages for solar
flux and sunspot
numbers.

The average daily sunspot numbers for the months September 2004 through November
2005
were 50, 77.9, 70.5, 34.7, 52, 45.4, 41, 41.5, 65.4, 59.8, 68.7, 65.6, 39.2, 13
and 32.2. Average
daily solar flux for the same months was 103, 106, 113.7, 95, 102.3, 97.2, 89.9,
85.9, 99.5, 93.7,
96.5, 92.4, 91.9, 76.6 and 86.3.

It looks like activity bounced back a bit in November, but look for the general
trend to be down
until the sunspot minimum, which should be about a year from now--possibly a bit
later.

For more information concerning propagation and an explanation of the numbers
used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive
of past
bulletins is on the ARRL Web site.

Sunspot numbers for November 24 through 30 were 30, 39, 30, 26, 27, 27 and 57,
with a mean
of 33.7. The 10.7 cm flux was 86.6, 79.9, 80.8, 80.7, 81.9, 84.7, and 94.7, with
a mean of 84.2.
Estimated planetary A indices were 9, 10, 5, 2, 9, 5 and 10 with a mean of 7.1.
Estimated
mid-latitude A indices were 6, 8, 3, 2, 6, 6 and 9, with a mean of 5.7.

10 Marines killed near Falluja
Marines conducting 'counter-insurgency' operations

Friday, December 2, 2005; Posted: 12:01 p.m. EST (17:01 GMT)

BAGHDAD, Iraq (CNN) -- A roadside bomb Thursday killed 10 Marines and wounded 11 others while they were on nighttime "foot patrol near Falluja," the Marine Corps said Friday.
The bomb was "fashioned from several large artillery shells," the Marine Corps said.

The attack is one of the deadliest in recent months. In August a homemade bomb killed 14 Marines and a civilian interpreter just south of Haditha in western Iraq.

The Marines attacked Friday were from Regimental Combat Team 8, 2nd Marine Division, II Marine Expeditionary Force (Forward).

The latest deaths bring the number of U.S. military deaths in Iraq to 2,123.

Marines have been conducting "counterinsurgency operations" in the Falluja and Ramadi areas ahead of the December 15 elections.

But the incident in Falluja was not part of the large-scale operations being conducted.

Operation Shank, on the other hand, is targeting Ramadi, which lies on the Euphrates River and has become a haven for insurgents affiliated with Abu Musab al-Zarqawi's al Qaeda in Iraq. His group has used the river as a highway to other cities, U.S. military spokesman Maj. Gen. Rick Lynch has said.

The coalition offensive there is aimed at rooting out the insurgency and stabilizing the area in preparation for the elections.

In Baquba, which lies on the Diyala River northeast of Baghdad, gunmen targeted two brothers who serve on Iraq's electoral board, killing one and wounding the other, police in Baquba said.

Police said that the gunmen were dressed in Iraqi army uniforms.

Majid Jabbar Brisem al-Hamdani was killed about 2 a.m. Friday, police said.

His brother, Hamed Jabbar al-Hamdani, who also served on the Independent Electoral Commission of Iraq and was head of al-Zaghamiya election center, was wounded and hospitalized.

Al-Hamdani told CNN the incident will not deter him from doing his job, and he plans to return to his position after he recovers.

The attack came amid heightened security measures for the elections.

Iraq's government has banned non-Iraqi Arabs from traveling to Iraq until further notice, said Brig. Gen. Adnan Abdul Rahman, an official with Iraq's Ministry of Interior. He said the ban would be in effect until some point after the vote.

The ban took effect on Thursday and also applies to diplomats, said the director of Royal Jordanian Airlines at Baghdad's International Airport.

The Associated Press reported that Jordan's airline also prevented one of its Egyptian correspondents from boarding a plane to Baghdad.

Meanwhile, both coalition forces and insurgents are engaged in a propaganda campaign.

Coalition spokesman U.S. Maj. Gen. Rick Lynch strongly disputed reports of widespread insurgent attacks in Ramadi on Thursday. He said that one attack, involving a rocket-propelled grenade, occurred Thursday and that it caused no damage or casualties. (Watch report on propaganda war -- 2:21)

The Defense Department is struggling to defend a military program that pays Iraqi media to publish favorable stories about the war and the reconstruction effort. (Full story)

Newsmax is reporting that after the explosion witnesses heard villagers
celebrating. (Maybe they were feeling "gay"...?)

When Johnny comes marching home again,
Hurrah! Hurrah!
We'll give him a hearty welcome then
Hurrah! Hurrah!
The men will cheer and the boys will shout
The ladies they will all turn out
And we'll all feel gay,
When Johnny comes marching home.

The old church bell will peal with joy
Hurrah! Hurrah!
To welcome home our darling boy
Hurrah! Hurrah!
The village lads and lassies say
With roses they will strew the way,
And we'll all feel gay
When Johnny comes marching home.

Get ready for the Jubilee,
Hurrah! Hurrah!
We'll give the hero three times three,
Hurrah! Hurrah!
The laurel wreath is ready now
To place upon his loyal brow
And we'll all feel gay
When Johnny comes marching home.

Still sounds like a special case. All of the parts seemed to
be composed of simple rectangular shapes (or combinations
of them - prismatic).

Optimal nesting when things like curved shapes are involved or
random numbers of odds & ends on various sheet sizes ... I seem
to recall it as a bit of a puzzle. And what sheet or strip size is
best for the parts to be made? A huge cost factor in stamping
& die design - trim waste. It's a 2D packing problem.

I never have had a letter read on the air but I think what you wrote
above is key if that is your objective, which is to add commentary about
the programming. Stating what you heard on their station and liked about
it and add some information about yourself such as your listening habits
creates a reason for them to read it on the air. Strive to be personable
instead of just providing a reception report. Give them your emotional
and intellectual reactions to the programming.

Radio Japan still does the phone call interview that is broadcasted. I
don't know if it's live or recorded. I expect it's recorded.

I think you just email them with your phone number and time to call you
back. You would have to write to the call in program address. Be sure to
pick a normal wake time in Japan.

Of course it is a 2D problem.

There were several shapes that included curves. They were the most "wasteful" as nesting other pieces close to them still yields lost material.

Very possible. Some model rockets can do that pretty easily. A typical
bottle rocket, no way.

If you don't mind the added bulk....try a 4-D or 4-C external battery pack. I like it a lot. Never have to go inside the radio to replace batteries. the battery holder, cord and plug at RS is less than $10 in total I think. Being a cheapskate, one thing I have started doing is transferring my semi-dead D cells out of flashlites over to the 398 power pack. Not enough juice left for a strong flashlite beam...but enough to power the radio for a good while.

Haven't heard them in years, but haven't listened to the pirate band in a while either. They used to have the strongest AM pirate signal I ever heard... on a couple occasions they were blasting as strong and clear as local stations, I wondered if they weren't broadcasting nearby (so' Ontario). I taped a few of their programs -- a Rush special, and an early test b'cast with all-Metallica -- and still listen to those in the car once-in-a-while. And it wasn't just Dr. Tornado -- don't forget his pardner Senor El Nino! Raydeeo Meh-telli-ca Worldwide-ah.

Just a few deadenders in the last throes....say, how long is this throe
gonna last? And since the Pentagon is now in the biz of counting the number
of insurgents they kill each mission, and the numbers are no w accumulating
in the thousands, enquiring minds speculates just how few those "few
deadenders" there really are, hmm?

Source record: 52277

We'd discussed this before, but I thought I'd pass this
note along. I e-mailed the service dept of ICOM and
asked about whether the service for the IC-R71A will
still be available. They replied that right now, service
is available for the R71A, and most of the internal
parts are used in other ICOM equipment, so that's not
of much concern. Of concern, however, is that the
potentiometers will no longer be available in a few years,
so you'd be out of luck as far as parts replacement there.
I suppose you'd have to go raiding nonfunctional models
for the pots...

Just wanted to pass that little tidbit along.

I'd like to hear you sing your tune above when a *nuclear device*
is detonated in one (or more?) major American cities. Best part is
you don't even have to be close. Just park it in one of those
Public Storage rental places in the suburbs on a timer. They won't
even know wtf hit them! Then after, you can thank Israel and AIPAC for our
Iraq invasion
and securing Israel's borders at the expense of 700K+ American lives.
(I bet the jew bastards won't even send a thank-you or a sympathy card
either.....)

It would take a liberal brain to see this. The active brain would notice
that the first is criticism of lies and half-truths ("revisionism"), while
the second suggests that legitimate criticism is good. The two do not
contradict each other.

Check your history. The country was full of anti-war leftists; that's what kept us out for the first two years. That's also why it took nearly a year to get armaments produced; they kept the military budgets down back then, too. They even had people flee the country to avoid the draft. Difference was that the press back then was pro-America and didn't make heroes out of such scum.

(10)US Marines killed and numerous injured! How can that happen! That must of been on big ass IUD to get that many guys! I'm sorry to say this now but fuck the iraqi people, let them figure out this shit on their own and get our guys home.

If we ever go back it should only be from the air with big bombs that we drop not giving a damm where they land!

I phoned the station about Alex Jones' missing show last night. It was a very nice call, I rather enjoyed speaking with the man that answered the phone. He claimed that Alex was on as normal this afternoon and that the problem last night was a glitch of sorts.

Thats one solved. Hopefully Alex will move back to the 3.215 frequency that booms into Pittsburgh. 5.765 is a hit and miss thing here, I can't listen to the show every night, and some of the nights that I can, it's still difficult listening.

Dr. Artaud

Mr. and Mrs T', or in reference to tomato juice in general ?

Bloody Mary Mix:

1 can 46 oz. tomato or clamato juice
2 Tbs. worcestershire sauce
1 Tbs. lemon juice
1 tsp. salt
1 tsp. celery salt
1 tsp. chili powder
1 tsp. tobasco or hot sauce

In picture combine all ingredients, stir and refrigerate. Serve on the rocks
with 3/4 - 1 shot vodka. Stir with a stock of celery or pickle appetizer.

John

Vibrations in crystal lattice play big role in high temperature superconductors
By Robert Sanders, Media Relations | 16 August 2004

http://idb.exst.jaxa.jp/ideadata/04048/199906E04048000/199906E04048000.html

Crystal Growth of Organic Superconductors Under Microgravity | 1999

Results:

1) While raising concentration of the donor and acceptor materials to satisfactory levels on earth required approximately three months, the same concentrations were achieved in approximately seven days in orbit. The organic superconducting single crystals grown under microgravity were of similar size to those grown on earth, while being of higher quality.

2) On earth, crystals grew not only in the central chamber, but in the side chambers as well, however under microgravity they grew only in the central chamber. The conclusion of the experiment is that elimination of the effects of gravity allows the realization of conditions ideal for diffusion.

The name doesn't ring a bell. I'm sure there are many thousands of medical practitioners whose names I don't know. Have you spelled it correctly? Remember, you have a spelling problem. Keep in mind the fact that I retired from practice 11 years ago.

450. Pick my next portable SW radio

Newsgroup: rec.radio.shortwave

My Tecsun PL-200 has taken a beating and is due for a replacement.
Should I buy another one or look at another model. I've not been
looking for a year and don't know what portables hae come to market
i n the past year.

The only fault I can find with the PL-200 is lack of a connector for
an external wire antenna (and ground, I guess) and the night light
should stay on as long as I'm playing with the buttons.

The size is fine. A little larger wouldn't be a problem if it gets
me something.

Suggestions ?

Thanks.

I did indeed spell it correctly, and I don't have any difficulty with spelling. I speak real English, not Merkin. Huge difference. Huge.

Ed is a bit of a guru in the field of head and neck surgery. Very innovative surgeon.

The Degen 1103 is, in my opinion, the best value for amount of money spent.
Dual conversion. Extremely sensitive off the whip, SSB cabable. External antenna jack.
Alarms,
sleep timer, tuning knob. GREAT reception (I can't emphasize that enough)

The Kaito version (KA1103) is more expensive but comes with US warranty.

Non-ergonomic keypad layout (it took me all of 5 minutes to adapt to it)

The pre-set memory system leaves a lot to be desired.

Basically useless, but cool looking, fake analog dial.

Chinese manual, but vendor should supply English version in .pdf or MS Word format.

Charges batteries in the radio if you have a 110 to 220 volt step up transformer for
North American electrical mains. I use good NIMH batteries and my own charger.
Never used the batteries that came with it.

Regardless of shortcomings in the above categories the 1103 is a fantastic portable.

Note:
Direct from China shipping of the Degen model means you have a headache if you need
warranty repair. However, I've never had a problem with anything I bought from eBay
seller Liypn.

464. (OT) For The Brainwashed!

Newsgroup: rec.radio.shortwave
Date: 2005-12-03 01:08:15 UTC
From: Oklahoma Joe <ok-no-spam@okie.net>
Message-ID: <4390EFFC.63FD9719@okie.net>
Source record: 52624

The American people have been brainwashed by the corporate media, but are they gullible enough to accept this Bush plan for global domination, involving a whole series of foreign wars against recalcitrant countries at enormous expense, without a tremendous fear-inspiring event like took place on 9-11? I think not. As a person with two degrees in science, I must say that this does not scientifically prove a conspiracy took place. However, all this evidence certainly increases the probability of one. Three things are certain. First, the fear and patriotism induced by the horrifying events of 9-11 had numerous and obvious advantages for the policies of President George W. Bush. As Nazi leader Hermann Goering said: "Voice or no voice, the people can always be brought to the bidding of the leaders. That is easy. All you have to do is to tell them they are being attacked, and denounce the pacifists for lack of patriotism and exposing the country to danger." Second, the war against Iraq is about control of oil and not weapons of mass destruction. Third, this is not really a "war on terrorism," but rather a war for empire.

.....

CONSPIRACY THEORIES AND 9-11

By The Iconoclast, Associated Press

Initially, the Bush administration said that it had no warning that jet airplanes could be used as missiles to attack buildings in the United States. Then, CIA and FBI documents came to light indicating that they had investigated this possibility, and the Bush administration was forced to back off on this assertion of ignorance. Even more disturbing is the fact that after the first plane was hijacked and deviated from its prescribed course, more than an hour and a half transpired with no fighter jets

being
dispatched. As a comparison, after the jet carrying golfer Payne Stewart
flew off course, the response time for F-16 fighters was only 21
minutes.
Only after two jets had crashed into the World Trade Center and another
one
was headed toward the Pentagon were F-16s sent up to intercept and then
from
Langley Air Force Base, which is 130 miles from the Pentagon, rather
than
from Andrews Air Force Base, less than ten miles from the Pentagon. Why?
These are just a couple of the discrepancies in the official story of
what
happened on 9-11.

If the Bush administration allowed 9-11 to happen, at least three things
need to be analyzed. What would the motivations be, is there a history
of
the US government planning or actually doing similar things and could
such a
conspiracy be covered up?

The events of September 11, 2001 were extremely fortuitous for the
reactionary agenda of President George W. Bush. I have made a list of
the
potential advantages.

1. 9-11 provided a perfect excuse for a war against the Taliban in
Afghanistan, which had already been planned for October 2001 because of
the
refusal of the Taliban to allow the Unocal gas pipeline from Central
Asia to
the Indian Ocean. The numerous meetings between US representatives and
the
Taliban are described in a book called Bin Laden-the Forbidden Truth by
French intelligence analysts Jean-Charles Brisard and Guillaume Dasquie.

2. It provided an alibi to build military bases in Central Asia to
control
the enormous oil and gas reserves present there. Also, it allowed the
introduction of American troops and military advisors into numerous
countries to maintain "stability." "Stability" is a media code word
meaning
a favorable investment climate for corporations-no unions, no taxes, no
environmental restrictions, a repressive police and military to put down
popular uprisings, a puppet government, etc.

3. Anticapitalist revolutionaries like the FARC in Colombia, the
Zapatistas
in Chiapas, the Maoists in Nepal and the New People's Army in the
Philippines could now be more convincingly labeled terrorists and
destroyed.

4. Anticapitalist protesters like those at the demonstrations in Seattle and
Genoa could conceivably be called terrorists at future demonstrations
(particularly if there were violent acts by agent-provocateurs) and
imprisoned under new laws that remove all their civil liberties.

5. Huge tax breaks for the rich and an increase of nearly 100 billion
dollars in the military budget could easily be pushed through a very
patriotic US Congress. In addition, Star Wars could be funded
completely.
Contrary to popular opinion, Star Wars is an offensive system, involving
lasers and particle beam weapons on orbiting satellites.

6. The increase in military spending would act as a stimulus to an
economy
in recession and a stock market in free fall. Military contracts are a
guaranteed market for capitalists, highly profitable and independent of
consumer demand.

7. US citizens possible anger over billions more going to the Pentagon
while
hospitals and libraries close, students lack textbooks in schools, the
infrastructure crumbles, etc. could be diminished by continuing the
terrorist alarms.

8. The risk of increasing dissent over the recession, corporate scandals
and
unending war could be reduced by a flag-waving fervor and United We
Stand
slogans.

9. Under the pretense of the need for increased homeland security,
strikes
could be broken and attacks on unions made. President George W. Bush
wants
all new jobs created under the Office of Homeland Security to be
nonunion
and he wants to privatize many civil service jobs, effectively breaking
their unions. He has already invoked the Taft-Hartley law against the
dockworkers.

There are so many discrepancies in the official story about 9-11 and so
many
advantages to the reactionary agenda of President George W. Bush that
does
one really have to be a "conspiracy theorist" to have serious doubts
about
what really happened?

Those who deny the possibility of a conspiracy occurring involving the
US
government, often claim that there is little likelihood of the US
government

being complicit in the deaths of its own citizens. Even some leftists make
this claim, believing that although the United States has done atrocious,
despicable things to Third World people, that they would never do the same
to American citizens.

One has to conveniently forget a lot of history to come to this conclusion.
There were the GIs forced to walk across ground zero after nuclear
explosions, the downwinders in Utah, the unsuspecting people injected with
plutonium, the syphilis experiments at Tuskegee, the assassinations of
dozens of members of the Black Panthers and American Indian Movement, Waco
and Ruby Ridge, the American soldiers exposed to Agent Orange and depleted
uranium and the germ experiments conducted over US cities and states. Then,
there was the Joint Chiefs of Staff plan called Operation Northwoods to
provoke a war with Cuba by sinking a ship with US military personnel at
Guantanamo Bay or conducting terrorism in US cities, involving civilian
casualties, and blaming it on Cuba. Incidentally, this was reported by David
Ruppe on November 7, 2001 on ABC news.com- hardly a website of the black
helicopter crowd. In addition, there are the millions of citizens of
capitalist nations, including the United States, who have been used as
cannon fodder in wars for control of natural resources and cheap labor or to
eliminate alternative economic systems. I have not mentioned the even more
significant crimes committed against foreign populations.

Another criticism of conspiracies involving the US government is the idea
that a lot of people would know, causing great difficulty in covering up the
conspiracy. I think the JFK assassination disproves this theory. The lone
gunman with the magic bullet is so implausible that a conspiracy is very
likely. The Zapruder film shows that the gunshot which destroyed the front
of Kennedy's skull came from the front and not the back. How did they cover
it up for nearly forty years? Witnesses suffer mysterious deaths, other
people who know the truth get old and die and the corporate media is
certainly going to be unreceptive to anyone who comes forward with evidence
to contradict the official story. The Church Committee discovered that
many

editors and journalists at major American newspapers were in fact CIA employees. It is a matter of public record, although rarely discussed.

Finally, the Sunday Herald of Glasgow, Scotland has discovered two US government documents, which prove there were plans for US global domination
and control of oil well before 9-11 happened. One document was prepared for
Vice-president Dick Cheney and others in the Bush administration by the conservative think tank, Project for the New American Century. It states the
need for the United States to dominate the Persian Gulf region, to control
space and cyberspace and to eliminate any competition from Europe in this
global domination. Another document called Strategic Energy Policy Challenges For The 21st Century openly admits that the reason for war with
Iraq is to secure US access to, and control of, Middle Eastern oil fields.

The American people have been brainwashed by the corporate media, but are
they gullible enough to accept this Bush plan for global domination, involving a whole series of foreign wars against recalcitrant countries at
enormous expense, without a tremendous fear-inspiring event like took place
on 9-11? I think not. As a person with two degrees in science, I must say
that this does not scientifically prove a conspiracy took place. However,
all this evidence certainly increases the probability of one. Three things
are certain. First, the fear and patriotism induced by the horrifying events
of 9-11 had numerous and obvious advantages for the policies of President
George W. Bush. As Nazi leader Hermann Goering said: "Voice or no voice, the
people can always be brought to the bidding of the leaders. That is easy.
All you have to do is to tell them they are being attacked, and denounce the
pacifists for lack of patriotism and exposing the country to danger."
Second, the war against Iraq is about control of oil and not weapons of mass
destruction. Third, this is not really a "war on terrorism," but rather a
war for empire.

Bush in Iraq, Slouching Toward Genocide

By Robert Parry

December 1, 2005

Despite pretty words about democracy and freedom, George W. Bush's "victory" plan in Iraq is starting to look increasingly like an invitation to genocide, the systematic destruction of the Sunni minority for resisting its U.S.-induced transformation from the nation's ruling elite into second-class citizenship.

The Sunnis, an Islamic sect that makes up about 35 percent of Iraq's 26 million people, are being confronted with a stark choice, either accept subordination to the less-educated Shiite majority or face the devastation of Sunni neighborhoods, the imprisonment of many Sunni males and the deaths of large numbers of the Sunni population.

In referring to this possibility, many in Washington object to the word "genocide" -- which is defined in international law as the destruction of "in whole or in part, a national, ethnical, racial or religious group" -- but already there are troubling signs that Iraq's incipient civil war could slide into something close to that.

Retaliating against Sunni bombings and other attacks on Shiite targets over the past two years, Iraq's Shiite-controlled security forces have begun rounding up, torturing and executing Sunni men.

"Hundreds of accounts of killings and abductions have emerged in recent weeks, most of them brought forward by Sunni civilians, who claim that their relatives have been taken away by Iraqi men in uniform without warrant or explanation," New York Times correspondent Dexter Filkins reported from Baghdad.

"Some Sunni males have been found dead in ditches and fields, with bullet holes in their temples, acid burns on their skin, and holes in their bodies apparently made by electric drills," Filkins wrote.

"Many have simply vanished." [NYT, Nov. 29, 2005]

In November, a secret bunker -- where Sunni captives were mistreated and apparently tortured -- was discovered in an Interior Ministry building in Baghdad.

The Shiite-dominated government has denied responsibility for the abuses and the murders.

But human rights groups and other investigators have blamed many of the Sunni killings on the Badr Brigade, an Iranian-backed Shiite militia associated with a leading element of the Iraqi government, the Supreme Council for the Islamic Revolution in Iraq.

The Council has close ties to the fundamentalist Shiite government of Iran.

'Death Squads'

U.S. officials also acknowledge that hard-line Shiite militiamen, who have penetrated the government's security forces, are operating "death squads" to terrorize Sunnis.

The killings and disappearances are reminiscent of the bloodshed in Central America in the 1980s when right-wing regimes in Guatemala and El Salvador unleashed security forces to round up, torture and kill suspected leftists.

That violence, however, was primarily defined by political ideology, rather than race, religion or ethnicity.

An exception was the slaughtering of a Mayan Indian tribe in the Guatemalan highlands as part of a military scorched-earth campaign that later was investigated by a truth commission and denounced as "genocide."

In Iraq, the religious component of the nation's incipient civil war is already apparent, although Bush often has presented the Iraqi conflict to the American people as a war largely between foreign Islamic "terrorists" and freedom-loving Iraqis.

Bush finally dropped that distorted analysis in his Nov. 30 speech about his plan for "victory" in Iraq.

He divided the "enemy in Iraq" into three groups -- the Sunni "rejectionists," who resent having lost their privileged status; the Sunni "Saddamists," who retain loyalty to ousted dictator Saddam Hussein; and the foreign "terrorists," who have entered Iraq to fight the American invaders and generally spread chaos.

U.S. military analysts estimate that more than 90 percent of the forces battling American troops come from the first two Sunni categories, with the foreign jihadists representing only from 5 to 10 percent of the armed opposition.

Though Bush didn't give percentages, he did list the groups in declining order by size, with the "terrorists" the smallest.

Yet what is problematic about Bush's analysis in terms of the genocide issue is that he identifies the vast majority of the "enemy" as Sunnis.

That means both Iraq's Shiite-dominated government and U.S. forces in Iraq are already targeting a religious minority for defeat,

establishing one of the first conditions for the definition of genocide.

'Complete Victory'

The next element in the equation will be how far the war against the Sunnis goes -- or put differently, how stubbornly the Sunnis resist.

For his part, Bush reiterated that he will only be satisfied with "complete victory," which suggests he is resolved to break the back of the Sunni resistance at whatever cost.

The Bush administration also wants to keep a tight hold on information that might put the U.S. war effort in a negative light.

That means the American people can expect to be shielded from many of the worst secrets in Iraq, much as the White House has continued to fight release of video showing abuses at Abu Ghraib and other U.S.-run prisons in Iraq.

According to U.S. military experts I've interviewed, a great deal of emphasis in the future will be on "perception management," the concept of shaping how both Iraqis and the American people perceive the events in Iraq.

This media manipulation, combined with secretive "death squads," adds even more to the recipe necessary for war-time atrocities that might cross over into genocide.

Other warning flags were raised in a New Yorker article by veteran investigative reporter Seymour Hersh, whose sources cited both Bush's messianic commitment to stay the course in Iraq and to a shift toward a reliance on aerial bombardment of "enemy" targets, as U.S. troop levels begin to decline.

"A key element of the drawdown plans, not mentioned in the President's public statements, is that the departing American troops will be replaced by American airpower," Hersh wrote.

"Quick, deadly strikes by U.S. warplanes are seen as a way to improve dramatically the combat capability of even the weakest Iraqi combat units.

"The danger, military experts have told me, is that, while the number of American casualties would decrease as ground troops are withdrawn, the overall level of violence and the number of Iraqi fatalities would increase unless there are stringent controls over who bombs what."

One of the risks is that the power to target U.S. air attacks would be put in the hands of Iraq's Shiite-controlled government, which could then rain down American death and destruction from the air on Sunnis and other rivals.

An example of this kind of horror occurred in the early days of the war in March 2003 when the U.S. military relied on a false report from a supposed informant that Saddam Hussein was eating at a Baghdad restaurant.

The restaurant was bombed, killing 14 civilians, including seven children, though Hussein was not there.

The Sunnis also got a taste of U.S. destruction from the air during the assault on Fallujah in April 2004. With U.S. warplanes shattering the city with 500-pound bombs, hundreds of Iraqis -- many of them civilians -- died.

There were so many dead that the city's soccer field was turned into a mass grave.

God's 'Man'

Hersh's sources said, too, that Bush's fundamentalist Christianity has added another complication to the U.S. pursuit of a realistic strategy in Iraq.

"Bush's closest advisers have long been aware of the religious nature of his policy commitments," Hersh wrote.

"In recent interviews, one former senior official, who served in Bush's first term, spoke extensively about the connection between the President's religious faith and his view of the war in Iraq.

"After the Sept. 11, 2001, terrorist attacks, the former official said, he was told that Bush felt that 'God put me here' to deal with the war on terror. The President's belief was fortified by the Republican sweep in the 2002 congressional elections; Bush saw the victory as a purposeful message from God that 'he's the man,' the former official said. Publicly, Bush depicted his reelection (in 2004) as a referendum on the war; privately he spoke of it as another manifestation of divine purpose." [New Yorker, Dec. 5, 2005]

Caught up in his divine mission, Bush has repeatedly rejected cautionary advice about Iraq, dating back to pre-invasion warnings from the likes of Gen. Brent Scowcroft, national security adviser under President George H.W. Bush.

Even now, military advisers say Bush gets angry when they bring him negative news about Iraq.

This mix of Bush's religious zeal and his refusal to accept reality adds another layer of danger as the United States slouches toward potential genocide in Iraq.

But some in Washington say it's outrageous even to suggest the possibility of the U.S. government engaging in a crime against humanity as severe as genocide.

Despite the historical fact that much of the American continent was settled after genocide against Native Americans, the notion of such a present-day crime is considered unthinkable.

The Bush administration, however, already has crossed other bright lines of international law, including the invasion of a non-threatening foreign nation and complicity in torture, such as subjecting captives to simulated drowning in a process called "water-boarding."

So, how unthinkable is it really that the Bush administration might venture across another boundary of civilized behavior?

What if Iraq's Sunnis dig in their heels because they suspect that their historic Shiite rivals plan to deny the Sunni population a significant share of Iraq's oil reserves, which are located mostly in Shiite and Kurdish territories?

With little choice besides living in poverty in Iraq's central desert, the Sunnis might decide that their best option is to continue fighting until the Shiites make far bigger concessions, such as giving a strong central government control of the oil riches.

If that's the choice the Sunnis make -- and if Bush sees his commitment to a "complete victory" as part of God's plan - might the Shiites then exploit U.S. air power to inflict a final crushing blow against their ancient enemies?

Perhaps cooler heads will prevail and excessive bloodshed will be averted.

But if too many more lines get crossed, the rest of the world may extend the list of crimes already blamed on the Bush administration -- to include genocide.

But it's all OK, folks, 'cause, ya see, Bush is bringing democracy to Iraq.

Pentagon, intel pros tell Bush war cannot be won

By DOUG THOMPSON

Nov 30, 2005

While President George W. Bush tells the American people that U.S. troops must stay in Iraq until they have "achieved victory," Pentagon planners and intelligence professionals tell the White House the war cannot be won.

"The President's speech tonight will be a con-job," says a senior Pentagon analyst who asked not to be identified.

"He will be attempting to sell a strategy that is not achievable and one that is not backed by the professionals who tell him otherwise."

In fact, experts say Bush can no longer rally Americans to support his failed far in Iraq.

"The American people have turned against the war, and they're not turning back," said political analyst Larry Sabato of the University of Virginia.

"The public is no longer with the President on this issue."

But opposition to the President's policies also grows in the private corridors of the Pentagon and in the intelligence community where professionals in the art of waging war say the battle for Iraq is lost.

"It's over," says a longtime analyst for the Central Intelligence Agency.

"It's been over since we declared a victory we didn't achieve and claimed to have accomplished a mission that was unfinished."

Bitterness grows within the military and intelligence establishment over Bush's unwillingness to listen to reason on Iraq.

Analysts called to the White House to provide intelligence briefings on the situation in Iraq dread the trip to 1600 Pennsylvania Avenue where an honest assessment of the war brings anger and sharp rebukes from a President who doesn't like to hear bad news.

"It's a no-win situation," says one longtime Pentagon operative.

"If we provide an honest assessment of the situation the President blows his stack. He ignores our recommendations and then blames us when things go wrong."

A record number of senior officials at both the Pentagon and CIA have left in recent months, saying they are unable to deal with what they call "the imperial Presidency of George W. Bush."

Republicans also grow increasingly nervous over Bush's stubbornness on Iraq and know the growing public opposition to the war is killing them politically.

"If elections for Congress were being held next Tuesday, Republicans would lose both houses. The GOP knows it," says Sabato.

Other feel opposition to the war will continue to grow and, with it, increased demands that the U.S. withdraw..

"No matter how the questions are phrased, all the polls have logged increases in pro-withdrawal sentiment over the course of the war," says John Mueller, an expert on war and public opinion, based at Ohio State University.

"And that sentiment is inextricably linked to the growing belief that the war itself has been a mistake."

That belief the war itself has been a mistake is one shared by a growing number of those whose job it is to wage war -- the pros at the Pentagon and in the intelligence community and the same pros that George W. Bush ignored in his headlong march into a losing war in Iraq.

Of course none of this has an impact on an mentally disturbed presidunce who converses with God.

Wow! Just finished watching a great program on the local Detroit PBS station called "Radio Revolution: The Rise and Fall of the Big 8". It's a look back at CKLW (Windsor, Ontario, 800kHz) in the 1960s and 70s when this 50kW powerhouse covered the eastern half of the U.S.

I enjoyed it on two levels--as someone growing up in Detroit during CK's heyday and as one who was working in Detroit broadcasting at the time and knowing some of the people on this show.

If you are into the history of broadcasting or grew up listening to the station you will probably enjoy watching this program. It may run on your local PBS station; if not, it is (or will soon be) available on DVD.

WND is one of Richard Mellon Scaife Nazi news services. "Truth" is not
on Scaife agenda.

BTW, I can play games with stats too. Lets take 905 deaths divided by
the number of troops. Call it 150k. Then take 2394 deaths in Ca and
divide by 25 million (state population).

905/150000 = 0.6%
2394/25e6= 0.0096%

The ratio of death rates is 63. I'll take my chances in Ca.

I saw it tonight too... thanks to Ed (Blacksmith) calling and reminding me! Loved it. I have been thinking, Detroit should have an "All Station Radio Reunion".. at the FOX theatre. have booths for all the stations in the lobby, as many jocks as possible, and benifit different charities! THEN have a concert with about 12 acts or more... each station could have 2 or 3... The Rationals, The Contours, Grand Funk Railroad, Seger, Mitch Ryder, etc.

Back in the 1950's I often listened to Radio Moscow with my Knightkit
Space Spanner. They solicited letters from SW listners, so I wrote. Sure
enough, late one night I was listening and they read my letter.

487. Re: Sony 7600 GR Radios

Newsgroup: rec.radio.shortwave
Date: 2005-12-03 06:23:38 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1133591018.542843.7740@f14g2000cwb.googlegroups.com>
Source record: 52647

Dear Cuhulin,

I own two Sony ICF-SW7600G models (purchased in 1998 and 2000) and three ICF-SW7600GR models (one purchased in 2001 and the other two purchased in 2002). I also own five AN-LP1 antennas which I use with these. I have them in several rooms in my house and I take one of the G models and its AN-LP1 when I travel.

All my other portable SW receivers have been "retired." I use only these Sony's as portable SW receivers.

The GR model has a few more features than the G model, and they are all worthwhile, but the performance is identical.

I use NiMH rechargeable batteries (several 1800 mAh sets and one 2100 mAh set) in all of the radios (4 AA batteries) and antennas (2 AA batteries) and these work fine. I do not bother with an AC adapter.

The radios are certainly not the equal of my Grundig Satellit 800 (AOR WL500 window loop antenna) or my AOR AR7030 Plus (Wellbrook ALA 330S antenna), but, in their category, I think they are tops. Their performance satisfies me (you can see that I have pretty high standards) and they are very ruggedly built.

If you know what you're doing, you'll pick up many, many countries and the reception quality will be as good as you can get with a portable this size. The Sony ICF-SW7600GR features a synchronous detection circuit which works quite well, though, of course, not as well as those on better (and much more expensive) field portables, portatops, and tabletops. Only one other small portable SW radio features a synchronous detection circuit - the Sony ICF-SW07 and, though its price includes an AN-LP2 antenna (which tunes automatically instead of manually as does the AN-LP1), it is far more costly than the '7600GR/AN-LP1 combination and, at least according to PASSPORT, works no better (I do not own an ICF-SW07). And don't let anyone kid you - the synchronous detection circuit makes a huge difference in the quality of the signal received on SW and MW, especially at dawn, at dusk, and at night (and, in my opinion, anyone who says it doesn't either is not using it properly or frankly just does not know what he's doing at all). Personally, I will never buy any SW radio that doesn't have this circuit unless someone comes up with something better!

I have never had even the slightest problem with any of my Sony's and I would recommend the radio to you. I would also suggest that, if possible, you buy the AN-LP1 antenna as it makes a major difference in the quality of reception.

You can buy the radio for about $130.00 and the antenna for no more than $90.00, both new, from reputable companies.

It's not the cheapest, but I think it's the best.

Joe

but it is bullshit.

at DC the resistance of the conductor (and leakage resistance of the
dielectric) will soon dominate the measured resistance,

the page cited seems to ignore these quantities.

Hi all
I am relatively new to sw, and have heard a great deal about the Sony2010
I am thinking of purchasing one of these, now I have a 7600gr, but find it
very difficult to fine tune ssb because of the small tuning wheel.
Apart from the size of the two radios, would you say the 2010 is the
superior of the two radios or am I simply spending when there is not going
to be much difference
I would appreciate your views/recommendations etc.
regards
Roger

I have two ICF-SW7600G radios. Basically the same as the 'GR, except fewer memories and without the 'GR's variable level attenuator. I would say that the 7600GR is the best you're likely to find in the compact portable class. And the sync detector often does make a significant difference in the quality of reception.
Indeed, as Joe has mentioned, these radios are built quite well. While I don't have a 'GR, I've had a few models from this series, and they have seemed to have gotten successively better.
I've got one of the 'SW07s, too, and rarely would I say that reception is better on the 'SW07 than on the 'SW7600G.
The 'SW7600GR is an excellent choice, if you're looking for a nice, compact, well-made SW portable. It's easy to 'tote' as well, and there's nothin' derogatory in my use of the word: this radio is great for travel. It might cost a bit more than these radios comin' outta Guangdong; but overall, it's worth the price. The AN-LP1 is a nice addition, but you'll find performance to be quite exceptional using one of those $12.95 Sangean ANT-60 Roll-up antennae or even simply using the radio's own whip.

And mine are only 8X for DVDs and 40X on CDs. <sigh> Left behind
again<:-))

BTW I live about 14 miles from the world's largest Poly crystal
Silicon supplier. I think they also sell wafers. (very large wafers).

In 1960 a single crystal rod of the best purity you could get sold for
$165 a gram. Today the poly is of higher purity than those 10 pass,
float zone refined rods and as I recall it sells for something like a
couple bucks a Kilo. . Back then a single crystal rod of 3/4"
diameter and 16" long was about the biggest thing you'd see with poly
rods about the same size.
Now days wafers are running some where between 10" and 14". I'm not
sure the current size as I've been away from it for a long time. Poly
crystal rods are huge. It takes power hoists to move them.

Some time in the late 60's (as I recall) they were able to change to a
new method of sawing wafers which reduced the waste by about 50% or a
little better. At least one firm went out of business as overnight
they had doubled the single crystal yield with no increase in, cost,
time, or labor.

Last week there was an article in the local paper that the plant is undergoing another expansion. Not just an expansion, they are doubling the plant capacity and they are already the world's largest supplier but a good margin.

They have gone from a small operation in a cement block garage while using an old two story farm house for an office building to one huge complex.

Think about the amount of silicon used in a transistor, CPU die, or even the CCD in a camera which is probably the largest typical die and then think of the thousands of metric tons of the stuff this place produces.

The engineering costs to produce any particular IC or CPU are high, but once in mass production it drops to almost unbelievable levels. Remember CPUs starting out at a $1000 dollars or more and in about a year of so they are less than a $100 and often still in production. They end up being dropped from production, not because they are losing money as they aren't, but the new *stuff* brings a premium price so it's a no brainer to make the switch. Sure the price is high so they can write off the engineering costs in a hurry, but they are still making a healthy profit.

The same is true for tuners, decoders, converters, and other set top boxes. As that stuff is mass produced and there is a tremendous market for it, they will be moving to one and two chip designs dropping the costs to a couple of dollars where the broadcasters and cable companies can give them away with each subscription.

A nearby company purchased a large batch of high quality 19 or 20" LCD monitors. The cost was some where in the low $200 range. What was the price on those just a year ago, or two years ago if you could find one that large? <:-)) Currently the price is one of supply and demand for those. They could be sold far cheaper to the individual and it won't be long before they are.

Now If I could just convince my wife of all the good reasons for getting rid of the old 19" CRTs here and going to 21" LCDs. <:-))

I hate to say, or admit this, but I remember when the new TV sets finally came out with 21" CRTs <:-)) and those *were*expensive* Carried forward to today's dollars they cost more than one of the big 50 some inch plasma sets.

If SSB reception is important to you, you'll much prefer the '2010 over the 'SW7600GR, provided the '2010 is still in good shape. Sensitivity and selectivity are both better on the '2010, and you'll love the low noise floor on the '2010.

The 'SW7600GR is an excellent receiver for its class, but the '2010 is definitely a step or two above. If indeed you've found a great deal, go for it. Finding a great deal on a '2010 gets harder as time progresses. There's a reason (multiple reasons, in fact) why the '2010 is so very much considered a legend among SWLers.

Mind you, if you're looking for a true tabletop unit (as one of your previous postings suggested), then you might take a moment to consider the fact that the '2010, for all of its good points, is not a tabletop receiver. While the '2010 is definitely premium grade where portables are concerned, you'll likely find that, once hooked up to a serious outdoor antenna, it'll be prone to overload...all the more so on your side of the Atlantic than in North America, I would guess.

Best,

Junius

509. 'portable' AM/FM Shortwave Radio Question : Sony ICF-2010 / Sony ICF-SW7600GR / Eton E1 with XM Satellite Radio

Newsgroup: rec.radio.shortwave
Date: 2005-12-03 09:53:48 UTC

Roger,

My Opinion {Reasons} on Three Good Choices in 'portable' AM/FM
Shortwave Radio Question : Sony ICF-2010 / Sony ICF-SW7600GR / Eton E1
with XM Satellite Radio

If you have the Money - Then Buy the Sony ICF-2010 as it is the better
of the two Radios. The problem with the Sony ICF-2010 is that they
are not being made anymore; and you have to take the time to find a
'good' Used Radio that is fully functional and has not been damaged or
abused over the years. Used Sony ICF-2010 Radios can go for $240 to
$360 on eBay with some claimed New-In-the-Box Sony ICF-2010 Radios
going for $500 to $750.

GoTo => http://groups.yahoo.com/group/icf2010/

Ooops - It looks like I need to do an "ABOUT" -
The Sony ICF-2010 Message here on RRS :o)

If "Cost" {Price} and 'Assured Value' is a big concern; then the Sony
ICF-SW7600GR is you better bet - IMHO. The Sony ICF-SW7600GR Radio can
be bought "New" for about $150 and it is the best 'portable' AM/FM
Shortwave Radio out there in it's Price Range [.]

Looking over 2006 passport, both Eton E100 and Degen DE1105 get 2 1/2
stars..

would probably go with the Degen DE1105, as it has double reduction in
the same size
package, and 1,000 memories, which would be interesting to use if you
travel about.

Apparently a DVD of the documentary also will be available Thursday at
the Web site http://www.radiorevolutiondvd.com where you can order
with a credit card or check.

The Dutch shortwave pirate Alfa Lima International is changing frequency.
Being normaly in 48 mb around 6265 kc, 19 mb on 15070kc and 13 mb on
21890kc
Now they move to 6925, 15073 and 21860.
Transmision will be fired up today ,3-12-2005 and tomorrow for sure on 15073
and night time transmisions will continue but than on the new 6925
frequency.
(It could be that we are 1 too 15 kc above or under the anounced frequency)
Alfa Lima International is always broadcasting in Amplitude modulation and
is very active in the weekend (also at night)
During transmisions they keep an eyeball on the two biggest sw pirates
forums
http://www.frn.net and http://www.alfalima.net/forum
also they are often in their chatroom (http://www.alfalima.net/chatroom)
during transmissions

Roger,

I have a Sony 2010 and love it! Very sensitive for SSB signals with just a 20 ft. long wire attached to the telescopic whip. It pulls in weak signals every bit as good as my old $500-$1000 tabletops. It looks like Universal Radio has some used 2010's. Let me know if you decide to get a 2010.

Frank

I have a 7600GR. I also had the 7600G. The GR has a few more features,
but the practical performance is identical. I also have a KA-1101, KA1102,
PL-550. I also owned a YB-400 for a few years. Of all those well known
portables, I would take the 7600gr hands down. The PL-550 has better audio
quality and so does the YB-400, but the 7600GR is the best of all of them
for serious sw listening. The build quality is solid, the audio quality is
good and the user features are excellent. The sensitivity and selectivivity
are outstanding for a portable. It works well in SSB mode. One of my
favorite features of the 7600GR is the ssb selectable am synch. It can work
wonders for cutting out hets and other types of interference. I really
value the radio for that. Of all the portables I have used, it is also the
one that is the most responsible to use with a substantial external antenna.
I hardly bother with my other portables.

Thanks for the information.I read in this news group a few months ago
that Sony isn't making the Sony 7600 GR radios anymore I checked
www.jr.com website and they list them at $149.88 each plus about
$5.95 shipping & handling charges.I was wondering if another reliable
company has them for sale at a less price? I won't be toting the radio
anywhere though,it will sit on an end table by my couch.Which store or
stores sell the AN-LP1 antennas? I own a Panasonic RF-2600 radio which I
bought brand new about thirty years ago.Are the Sony 7600 GR radios
suppose to be better for dxing?

> It "leaks" and in some situaiton that is a benifit.

In my final year of undergraduate engineering, I did a project for a professor on a surface wave transmission line. While my project was not a stellar success, it was interesting reserach. One application he had in mind was to run a line beside a railway track and use time domain reflectometry to track the location of trains. The idea was that the large train body would affect the dielectric and electrostatic environment near the line, cause greater leakage and the radiation would be reflected back onto the line.

A surface wave transmission line is a waveguide, the complement of a cylindrically enclosed waveguide.

Tom

Roger,

The 2010 is a super radio for sure. Just be aware that on SSB, the tuning steps are 100 hz. In some cases you won't be able to tune in a sideband station with the same precision you can with the 7600g(r). Can you still understand them? Yes....but you often can't get "dead on" them.

539. Re: Sony icf 2010 question

The history I learned says it was the Roosevelt administration which most wanted us in the war. The Republicans were against it, as was a large part of the US population, particularly in rural areas.

The American Firsters are kinda sorta still around in the John Birch Society.

> That's also why it took nearly a year
> to get armaments produced; they kept the military budgets down back then,
> too.

Liberals kept military budgets down? Maybe. The depression certainly did. Roosevelt would have spent more, but even he had problems with his own tax and spend party. The borrow and spend party did not yet exist in it's current form.

> They even had people flee the country to avoid the draft.

Let's not forget that the country was still in a funk over the First World War, after which the "anti-foriegn entanglement" stance of Washington and Jefferson made perfect sense to many people. And conspiracy theories aren't a new product of twentyfirst century SW radio. There was then no shortage of people who thought the blood spilled in the First World War was only to benefit arms manufacturers and bankers.

> Difference
> was that the press back then was pro-America and didn't make heroes out

Hi Cuhulin,

I, too, have a Panasonic RF-2600 which I like quite a bit for its
pleasant audio. I think for dxing on the SW bands, you'll prefer the
selectivity of the '7600GR. For tuning in to a loud, clear broadcast,
though, you might well prefer the '2600 for the nice audio quality.

Junius

I was looking at a receiver catalog, and some of the receivers were advertised as containing a "DSP comb filter" which could be turned on when needed.

Can anyone tell me what a comb filter does and when it would be used?

Twisted pair or coax are just engineering solutions to a problem. Both
have their place depending on what you want to accomplish, money spent,
et cetera.

I installed a canadian desinged/built intrussion system that used
G-line instead
of "leaky coax". A pulse of microwave RF was sent down the line and
like RADAR,
anything man sized that was within ~20' gave a sharp/distinct return.
The analog
system could be tuned to ingore coyotes and dear. Worked very well.

A funny aspect of G-lines is that you can use aluminium wire. And after
the wire
has ozidesed some more it works better. I installed a 1000' Gline run
for a friend
on the back side of a hill that blocked TV from Lexington. It worked OK
when installed,
and got much better after about 2 weeks.

The losses at the start were comparable to low loss ladder line. But
after the 2 weeks
the losses went down. UHF channels of interest where 18, 27, 36, 46,
and 52. Still
working as of last weekend. We had to change the "feed line" after 15+
years. You do

have to keep trees/brush from growing into the "near field". He uses a bush hog twice
a year to keep the path clear.

We tried to use it for FM, it did work, but the launchers got too big and unwieldy.

One study I read suggested a "planer wave front" is formed between the conductor
and an insulating layer. I did try a 100' run with bar copper wire and it barely worked.

I still don't believe G-line can work, but I will continue to pretend it does.

Did you get that link of a synchronous detector I sent you?
The hotmail account is dead. I had to give up on trying to fight the spam. After getting several 100 hits a day I deciced it just wasn't worth it.

Terry

It's supposed to clean up the signal. Basically, the frequency response has
many peaks and valleys that together resemble a hair comb.

562. Re: What exactly is a comb filter?

Newsgroup: rec.radio.shortwave
Date: 2005-12-03 19:48:29 UTC
From: miso@sushi.com
Message-ID: <1133639309.504371.82650@z14g2000cwz.googlegroups.com>
Source record: 52720

You can make a comb filter by adding a delayed version of the signal to the real time signal. For example, pick frequency F with period T. Now make a filter that mixes the real time signal with a signal delayed by T. At the frequency F, both the real time and delayed signal will be in sync, so the amplitude will be double. Thus, you have a peak for frequency F, 2F, etc. If you inputed the frequency F/2, the period would be 2T. With one T of delay, the signals would be out of phase, and thus you get a notch. Extrapolating on this, you would get a series of peaks and dips as you swept the frequency, which looks like a comb.

In a TV, the comb filter is made by summing adjacent lines using a delay element. The phase of the color subcarier alters between lines, so summing adjacent lines cancels the chroma. You can invert the signal and cancel the luminance.

Yeah, especially high-ranking Republicans like Joe Kennedy. He was
making too much money doing business with Hitler.

On the contrary, I'm pretty sure by this time Roosevelt had the WPA and
other stuff going and was well on the road to the free-money-for-the-
indolent economy.

>> They even had people flee the country to avoid the draft.

Liberals like Tony can only handle the simplest of systems for keeping
track of such things. Their method goes like this:

If the president is a Democrat, then he is fair and wise and good and
trustworthy, and he can do no wrong, and everything he does is good for
the country.

If the president is a Republican, then he is evil and stupid and nasty
and a liar, and he can do no right, and everything he does is bad for
the country.

For One and All,

AM/MW/BCB Loop Antenna
for DX MW LF VLF *No Tuning* - by W1VLF
http://cgi.ebay.com/_W0QQitemZ5835229011
Highlights - Here is an very low impedance Loop Antenna,
constructed of 1/2" copper piping, 24" on a side, with a
Broadband Impedance Transformer, and a 20 db Gain
Low Noise, High Dynamic Range Pre-Amplifier. The
output is a common UHF type SO 239 female connector.

WWVB 60 kHZ Ferrite Loop Active Antenna - by W1VLF
http://cgi.ebay.com/_W0QQitemZ5837399066
Highlights - The Antenna is 3 Ferrite Rods formed together
and wound with number 21 AWG Wire. There is a
Pre-Amplifier inside the base of the Antenna, and it is
powered up the Coax.

++++++++++++++++++++++++
I wasn't trying say that coax is always "better" then twisted, but
after the 150
nonesense posts on the subject I wanted to dump some reality based math

on the subject.

As I have pointed out before in this NG, even coax can suffer from
ingress.
It just has a lot less then any balanced line I have experimented with.

I use balanced audio, video, data and networking, lines everyday at
work and
at home. But for low level RF distribution I have found that coax,
triax or twinax
beats any sort of balanced line when it comes to keeping iterference
out.

I still wish the proponenets on both sides would just string ~100' of
each type
line out, terminate properly, couple to the receiver properly, ie use a
transformer
to convert the balanced to unbalanced, and see which has the most
"stary" signal
pickup.

I want to do every thing I can to make sure that my 1uV signal from my
antenna
doesn't get smoothered in crud before it gets into my receiver. I get
enough crud

from the electronic crap that surrounds me.

You made an excellent choice in portables. Later, when you have some spare change, don't hesitate to buy the AN-LP1 portable loop antenna. It beats a 20 foot roll-up wire every time.

Also keep in mind, it actually has 102 memories. Memory "A" and "B" is used for the timer but can be loaded with your two most popular frequencies and pressed at any time.

Also, LongWave band is very sensitive and beacons are very hot on this lil portable.

Twinax is a balanced pair in side a coaxial shield.
I haven't ever seen a true twisted pair inside a braid.

Twinax is used for balanced video and some instrumentation connections.

Another varient of coax is triax. Think of normal coax with another
braid
over the coaxial pvc jacket. Can acheive decade more of isolation.
Commonly usd for very long, up to ~1/3mile professinal mobile video
runs.

I use Triax to feed a Doty style transformer located about 25' up.
The outer shield is the low side of the Hi-Z winding and connects to
it's own ground system.

>It's supposed to clean up the signal. Basically, the frequency response has
>many peaks and valleys that together resemble a hair comb.

The Comb filter was developed for Television. The colour information
in NTSC is transmitted in 3 parts. A B&W receiver only decodes one
part. The other two called Chromiance and Luminance are not entirely
seperated in the frequency domain, but are in the time domain. In
lower cost Color TV's, there is simply a 'hard' filter and the
chromiance and lumiance signals are processed as though they were
fully seperated in the frequency domain, resulting in loss of colour
detail and resolution. A comb filter performs the decoding effectively
in the time domain, where full seperation is possible, resulting in
higher detail and resolution.

An example of such of a system is AM stereo, and some Modems (Milgo
4800 baud comes to mind). It is possible to generate independent
sidebands, so a Double Sideband, Supressed Carrier, or Un-Suppressed
carrier (AM stereo) overlap in the frequency domain, but the carriers
used to produce them in the balanced modulator are at quadrature
(i.e. one sideband was built with Sin (wt) and the other with
Cos(wt)), the sidebands will also be a quadrature. This is in fact
how the Telephone company used to transmit long distance calls.

If you use an envelope detector with AM stereo you get L+R, however
if you use two product detectors that use phase locked, and 90
degrees out of phase carriers, it is possible to get for example only
Left Channel out of one, and only Right Channel out of the other
detector.

The Intergral over time (power in this case) of sin(wt)cos(wt) dt will
always be zero.

A comb filter generally involves some sort of phase locked, synhronous
detection even if carried out digitally.

You covered all the criteria for a transmission line except for
equalization since that is not appropriate to this discussion.

You hit on the main problem I think most people have and that is the local noise problem wether it is picked up by the antenna or lead-in as the determining factor to hearing a station or not.

NTSC is two parts, luminance (the monochrome signal) and chrominance (the color (colour) subcarrier, which is indeed in quadrature at either 3.58 (for most NTSC systems) or 4.43 MHz. In a standard detector setup, the color subcarrier is notched out of the video carrier to eliminate herringbone pattern in the video (wideband monochrome monitors show this very well indeed, as a fine herringbone pattern). I can't speak to a comb filter, as I have never studied them in any detail.

My webtv set top box connects to my tv set.(oviously) There are audio and video cables.A few years ago,I started getting light wavy lines on my tv set screen.A Time Warner cable tv guy was next door.When he got through with his work next door and as he was leaving,I stepped over there and mentioned my wavy lines problem to him.At the time,I subscribed to Time Warner cable tv,I subscribe to DirecTV now.He went to his truck and got a coax cable.The cable has a longer wire inside.He said my cable wasen't making good contact and he replaced that cable with the one he got from his truck.That cleared up the wavy lines on my tv screen immediatly,no more problems with wavy lines.

And how does an 'old style' Collins mechanical filter reduce distortion
during deep fades? That's what a sync detector does. No filter can do
that.

And the R-390 also has the Twinax input.

I have had much better sucess feeding it with coax.

There is a simple mod to allow an unbalanced connection
that is maybe 10dB more sensitive.

news:11p1qa1t6r5k8f2@corp.supernews.com:

Are people unjustly killed by "democratic" societies any less dead than
those killed by communist societies?

Is it OK to kill 50,000 Iraqi civilians since a group of Saudis allegedly
commandeered 4 planes, and killed 3000 innocent Americans, in a plan
orchestrated by a man in Afghanistan? Does this not seem convoluted to
you?

Does the invasion of a country to capture WMDs that aren't there seem
odd, as are the allegations that they took the weapons into neighboring
countries (why wouldn't they just use them?)?

Does the persistence of the U.S. to be able to use torture to extract
confessions from captives sound similar to treatment that one might
expect of prisoners in communist countries?

Is the fact that the U.S. is the only country to ever have actually used
nuclear weapons significant to you?

On a planet of insane people, the sane must appear insane.

The color difference channels are modulated in quadrature, but this has
nothing to do with the comb filter.

The comb filter works exactly as explained in my other post. Look at
this diagram:
http://www-ccrma.stanford.edu/~jos/pasp/Feedforward_Comb_Filters.html
The Z raised to the minus M is a generic delay of M samples. Basically
you sum the real time signal with a delayed signal. It's that simple.

It's a "packing problem", that's computer science speak for this is a hard problem for a computer to compute the answer for.

the programs are relativley easy to write, its just that they take a long time to run. or they need to be written to find a good answer instead of the best answer (which is harder)

Bye.

I listened to CKLW as a kid growing up in suburban Cleveland in the late 1960s-'70s and still hear the station booming in where I live now (Fairport Harbor, Ohio, very close to the south shore of Lake Erie). The station's 50kW signal covered the entire Lake Erie shoreline from Detroit east to Buffalo (including Cleveland and environs as well, of course) and could also be heard at night in 38 states (before the FCC redefined nighttime coverage regulations, even for 50kW bruisers like CKLW, and all but eliminated clear channels in the mid-1980s or thereabouts--until then, 800 kHz was an absolutely clear frequency at night, all night long, although there were a handful of daytime-only stations on this frequency that had to sign off at local sunset). I really enjoyed CKLW in those days, as it was what was known at the time as a top-40 station (it was but one of several top-40 outlets I listened to from Cleveland, most of which, except for WIXY-1260, now WWMK, Cleveland's Radio Disney, were 50kW clear-channel bruisers). A small local station near my hometown tried to duplicate CKLW's original format a few years ago, but the attempt failed, so the station went to syndicated talk in 2004 (IIRC) and has been running that format ever since.

I see CKLW's format being described here as legendary. If you want the story of another real legend in AM broadcasting in this country, you need look no further than Cincinnati's WLW on 700 kHz. This station began in the 1930s or so, IIRC, as a 500kW powerhouse that even lit up light bulbs in farmhouses near its towers when it was on the air--even if the bulbs were not in sockets or were installed in lamps that were not turned on or plugged in! This came to an end a few years later when the FCC capped the maximum power for AM stations at 50kW.

I no longer listen to CKLW on a regular basis (except for certain talk programs there and on WJR in Detroit). However, it was great reading here of the original CKLW's legendary history, the tail end of which I experienced from roughly 1968 until the station changed to talk programming. I don't remember most of the DJs who worked at The Big Eight anymore during its heyday, but one whose name still sticks in my head is Tom Shannon (a DJ on New York's satellite radio service The True Oldies Channel is named Scott Shannon; is he any relation?). CKLW also had a newscaster, now with ABC Radio news (IIRC), by the name of John Belmont.

Stations such as CKLW and other early 50kW clear-channel rockers are legends because they were pioneers in top-40 rock radio (as the format was known in the '60s); we will never see the likes of them again. I live near Cleveland (well, within 35 miles), a city which once boasted two 50kW rockers (and WIXY-1260, a 5kW station that didn't reach half the area at night) with live DJs. Today, most rock oldies stations are either programmed from satellite (as is a small 5kW station some 35 miles east of here), are dinky little local-service operations programmed by companies thousands of miles away, are on FM--or a combination of all three. Cleveland has a so-called oldies station on 105.7 MHz (WMJI-FM) which I listen to regularly, but believe me, ladies and gentlemen, it's no CKLW, but then again it doesn't want to be, preferring instead to have its own unique oldies format ('60s-'70s mostly). Too bad, as Cleveland is the home of the Rock and Roll Hall of Fame. The 5kw AM oldies station east of here doesn't reach the greater Cleveland area, especially at night (though I hear it here in Fairport Harbor just fine during the day until it starts fading long about sunset Eastern time); if it did, it would be the perfect complement to Cleveland's oldies FM.

BTW: I have not yet seen the PBS-TV program you mention on the history of CKLW-AM, as the local PBS station in Cleveland hasn't aired it as I write this. But I'll keep an eye open for it; when it shows up I will not only watch it, but tape it as well, as the history of legendary stations such as CKLW fascinates me no end. I'm not in the business of commercial broadcasting, nor would I want to be in this day and age of stations being controlled by huge broadcasting companies and programmed from central computers, satellite networks, and so on. However, I am interested in the technical aspects of the industry (I get the newsletter of the Inside Radio website every weekday and read it as soon as it arrives in my inbox; I also check the "Radio/TV Updates" section of 100000watts.com every day for news of changes at the nation's AM/FM/TV stations--it's fascinating reading, and since I understand a lot about the technical end of commercial broadcasting, it interests me immensely as well; I acquired this intense interest in the field from a lifelong interest in radio itself, as I am also a ham radio operator and even had my own Part 15 AM station from roughly 1970-1972).

BTW (2): CKLW-FM and CKLW-TV, though still on the air (FM 93.9, TV channel 9), are now operating under different call signs (have had new

calls for quite some time)--CIVR-FM and CBET-TV, respectively. The television station is an affiliate of CBC; the FM, I believe, is now soft rock, modern rock or some such (I haven't heard the FM station since last summer, though it, and most other Detroit/Windsor/SW Ontario FMs, booms in here like a local station--even in stereo--when the FM broadcast band opens up).

Here is a wish list for the "perfect" receiver.

1. specialized search functions- be able to define the search band.
(like a VHF scanner)
2. build in audio recorder with squelch- an hour recording time would
be nice. make it uploadable to PC.
3. upload/download freqs/text-
4. solar/crank recharger-
5. dc to daylight range-
6. video reception-
7. morse code translator- hey that's a good idea!
8. foreign language translator-
9. GPS postioner-
10. phone jack for remote use-
11. the whole thing the size of a paperback

What would your radio do?

All the Best, John in Texas..

Murtha Believes U.S. Generals Fear Bush Administration.

December 1, 2005

JOHNSTOWN --

The current issue of The New Yorker Magazine has an article that in it alleges that many of our military's most senior generals are deeply frustrated by the happenings in Iraq, but won't go public for fear they may jeopardize their career.

Congressman John Murtha says he knows about these fears.

The article quotes an unnamed former defense official saying the administration has "so terrified the generals that they know they won't go public."

The article goes on to say that legislators were told in meetings with enlisted men, junior officers, and generals that things weren't up to par.

But in a teleconference with Defense Secretary Donald Rumsfeld, those soldiers kept their criticisms to themselves.

Congressman Murtha agrees with these claims.

"There's nobody who talks more to the military than I do. I've been doing it for 30 years. They tell me privately how they feel. They're afraid to say something. This administration fired Shinseki and they scare them. But that's not theway it should be. Maybe telling them privately and just not speaking publicly as they tell me," says Representative Murtha.

Congressman Murtha says incidents in Iraq are up around 350 percent from last year.

He says just because they say there's progress, doesn't make it so.

Still support your presidunce, folks?

Scandals unveil the seamier side of Washington politics

By JAMES KUHNHENN

Knight Ridder Newspapers

WASHINGTON --

Big money is buying influence in Washington these days on a scale seen rarely, if ever, before.

Consider this:

After the terrorist attacks of Sept. 11, 2001, big-ticket defense contracts doubled, federal spending on those contracts jumped by $100 billion - and the number of lobbyists signed up to represent defense-industry clients spiked from 900 to more than 1,650.

In what would be an audacious abuse of that nexus of money, power and influence, two defense contractors now stand accused of bribing Rep. Randy "Duke" Cunningham, R-Calif. - a power on the House Defense Appropriations subcommittee - in exchange for top feed at the Pentagon trough.

Cunningham resigned from Congress this week after pleading guilty to accepting $2.4 million in bribes, including a Rolls-Royce and a $7,200 antique Louis-Philippe commode.

That case and other high-profile corruption investigations under way have enormous implications for next year's congressional elections.

At stake may be whether Republicans retain control of Congress.

While Cunningham clearly crossed a legal line by trading legislative favors for personal gain, his case spotlights the intersection of money and politics in Washington, where most lawmakers dance along a vaguer line that divides political donations from less-explicit paybacks.

The investigations into questionable links among lawmakers, contractors and lobbyists threaten to ensnare more members of Congress.

Already, widely reported instances of lobbyist-financed resort visits, golf outings, fine dining and million-dollar payoffs have hung a cloud of scandal over Washington.

"The closest analogy I can come up with is the Gilded Age," congressional scholar Norman Ornstein said, referring to the late 1800s, when tycoons such as John D. Rockefeller and Andrew Carnegie created giant "trusts" built on emerging industries in oil, steel and railroads - and bent Washington to their will.

Lawmakers and lobbyists need each other for government to function. Lobbyists provide expertise and often raise issues that require attention.

But the past five years have seen a sharp rise in lobbying that's in direct proportion to Congress's spending ever more of taxpayers' money.

Lawmakers increasingly load up spending bills with special projects for the folks back home.

This year's highway bill alone had 6,371 special-project "earmarks" totaling more than $24 billion.

At the same time, more and more lobbyists work this trend. From 2000 to 2004, the number of firms registered to lobby "appropriators" who control spending in Congress almost doubled, from 1,865 to 3,523.

Similarly, the Sept. 11 terrorist attacks prompted dramatic spending increases on defense and homeland security - and lobbyists flocked after it.

"People were chasing what was perceived to be an almost unlimited amount of money," said Anthony Townes, a political scientist at the University of Tennessee at Knoxville and the author of "Total Lobbying: What Lobbyists Want (and How They Try to Get It)."

Lobbyists know how to cultivate lawmakers.

They shower them with campaign contributions.

They buy expensive tables at political fundraisers.

Spotting a lawmaker the occasional five-star dinner is all in a day's work.

All are typical - and widely acceptable - methods of currying favor in Washington.

Cunningham's case exposed these relations at a seamier level.

Other lawmakers who got contributions from the two contractors who are accused of bribing Cunningham - Mitchell Wade and Brent Wilkes - are under investigation.

Today's ethical scrutiny doesn't stop there.

- The Justice Department is investigating former uber-lobbyist Jack Abramoff, whose partner pleaded guilty last month to charges that he conspired to bribe an unidentified congressman. That probe could splatter other lawmakers, including former House Majority Leader Tom

DeLay, R-Texas, Sen. Conrad Burns, R-Mont., Rep. John Doolittle, R-Calif., and Rep. Bob Ney, R-Ohio. All four deny any wrongdoing.

- DeLay is under indictment in Texas on charges of conspiracy to evade campaign-finance laws. He's fighting the charge, saying it's politically motivated.

- The Securities and Exchange Commission and the Justice Department are investigating Senate Republican leader Bill Frist's sale of stock in HCA Inc., a hospital chain that his family founded, shortly before its stock price plunged. Frist, of Tennessee, says he did nothing improper and is cooperating.

The Abramoff case has the most potential to capsize the Republican Party because of his extensive ties to lawmakers, especially DeLay.

It also illustrates the sheer magnitude of money involved in Washington lobbying.

Abramoff's work on behalf of Indian tribes seeking federal favors for casino gambling licenses alone brought him some $80 million.

He and a former partner have been indicted on fraud charges in connection with their purchase of a Florida-based line of casino cruise ships.

Separately, Michael Scanlon, another Abramoff partner and a former spokesman for DeLay, pleaded guilty to conspiracy to defraud the Indian tribes, and his promise to testify for the prosecution sent a rumble through Congress.

That investigation also ensnared David Safavian, a former Bush White House procurement director, who was arrested in September on charges of lying to investigators about his links to Abramoff.

"Bush is smart. I don't think that Bush will ever be impeached, 'cause unlike Clinton, Reagan, or even his father, George W. is immune from scandal. Because, if George W. testifies that he had no idea what was going on, wouldn't you believe him?"

IMine is quite old, but I don't recall the D nomenclature. However, for SSB, it only has a clarifier. I never cosidered that to be a good solution for sideband.

I see those Ray Jeffs at the flea market quite often. Twenty bucks is
tops. They are not very good for DFing. There was one novelty Ray Jeff
that had a tracking motor in it, not that it worked well either. The
problem is the null in a Ray Jeff is really shitty.

Hi,
No I agree, but I find it easier to "tune in" on ssb.
The sony76000gr in my opinion is one of the most difficult, fidgeity radios
to use on ssb, dont get me wrong, it is a brilliant radio, I just don't like
the ssb side of it.

Not at all. Please let me clarify. He merely said he didn't have any 'little knowledge' because it's a dangerous thing. That, by implication, means he has the opposite of 'little knowledge', as in 'the bigger picture'.

As an historical aside, the phrase a 'bigger knowledge' is used during Graduation Ceremonies in Georgia, USA.

For the lucky few who manage to completely FINISH their grade nine curricula that is.

David has a better command of the language than the Ass ever will. He also has manners far exceeding those of the unemployable dip in MI..

Whatever influence Joe Kennedy had in the Roosevelt administration ended
when Roosevelt fired him for insubordination.

Had the Boston Republican brahmins been more hospitible to Irish Catholics,
the Kennedys might have been as Republican as the Rockefellers. Joe Kennedy
did ended up liking Joe McCarthy much better than he liked Roosevelt.

Roosevelt was an anglophile and became a strong freind of Winston Churchill well before the Pearl Harbor attack. He was way ahead of the American public in wanting to give direct aid to the British. His opposition came from those who wanted to keep American money and weapons in America.

I don't see any contradiction in being a welfare statist and wanting to get America involved with the war.

Both the Pearl Harbor attack and Hitler's declaration of war against the US ended the isolationist movement. The isolationists weren't pacifists, but they weren't interested in war with nations which weren't declared enemies of the US.

Many US liberals of the era were admirers of the Soviet Union and ended their neutrality earlier when the Nazis broke the Hitler-Stalin pact.

Or maybe red white & blue would be more appropriate, since our founding fathers were so adamant about keeping a free press in our new democracy that they incorporated its protection in the very First Amendment.

("No government ought to be without censors, and where the press is free, no one ever will. If virtuous, it need not fear the fair operation of attack and defence. Nature has given to man no other means of sifting out the truth whether in religion, law or politics. I think it as honorable to the government neither to know nor notice its sycophants or censors, as it would be undignified and criminal to pamper the former and persecute the latter." --Thomas Jefferson to George Washington, 1792.)

The irony here is that you would criticize those newspapers for telling the truth. In this case the truth is that the Bush administration, while bragging about the "free and independent" news sources springing up in Iraq, seeks to control what those sources report. A free press has always been anathema to the Bush administration because of all the administration's devious pursuits and corrupt practices that don't hold up well to public scrutiny.

This administration is looking more and more like the corrupt Nixon/Agnew one, whose primary enemy was not the foreign powers who would seek to destroy our democracy, but rather the media who would seek to protect it.

A friend uses this scheme:<http://www.r390a.com/html/feedpoint.html>

I use a 7 turn primary to 10 turn, CT to ground, secondary.
I tried many different combinaitons and this appears to give the best
overall response.

The difference is minimal.

I own a R-391, synchro motor drive, and my friend has a R-390A.
In side by side tests it is difficult to impossible to tell which
recever is active.

It is cool enough to use the R-390 and my cats love to sleep on top of
the
receiver.

RHF,
Just a point of reference; not everyone who is against the US being in
Iraq is a Democrat. Also, however contrary to your, or general,
opinion a person's ideas may be does not automatically mean they lack
patriotism. Now I don't intend to defend Oklahoma Joe or anyone who
floods a SHORTWAVE group with POLITICAL TRIPE, just thought I'd pass
along a couple ideas that most people of your age and accomplishment
have already learned. Oh, one more thing.....take out that
Allah crap from the God Bless America line - the only 'blessing' Allah
and his followers have for the USA is whatever last rites they
administer.

Actually the insurgents are IRA members who've been jailed in England.
They were given three choices:
1) stay in jail
2) move to Canada
3) become an insurgent in Iraq.

As you can see, there will be insurgents at least until the English
jails are empty.

necrohiliac? I got to look that one up in my big Merriam Webster Dictionary.(but I dont think I am a necrohiliac,whatever that is?) I didn't ask to go to Vietnam.When I Joined the U.S.Army on October 28,1962 for three years,I asked to be in the St.Louis,Missouri area because my girlfriend lived in Kirkwood,that's how right after boot camp I wound up in ARADCOM at Scott Air Force Base,Illinois and SL-60 near Pacific,Missouri.If I had stayed in U.S.A.those three years,that would have been fine with me.I went wherever the U.S.Army sent me and I didn't complain about it either.At least I Joined up and I Served my Country. cuhulin

Message-ID: <1133719087.743579.180310@f14g2000cwb.googlegroups.com>
Source record: 52585

In an attmept to beat this subject to death, here are a few more links to usefull
information.

One measure of the degree of isolation bewteen a feedline the outside is called
"transfer impedance".

>From Fluke:
<http://www.flukenetworks.com/us/_Promotions/ISV/Glossary.htm>

"Transfer Impedance - For a specified cable length, transfer impedance relates to a
current on one surface of a shield to the voltage drop generated by this current on
the opposite surface of the shield. Transfer impedance is used to determine shield effectiveness against both ingress and egress of interfering signals. Shields with
lower transfer impedance are more effective than shields with higher transfer
impedance."

Blue Jean Cables has a good simple article with chart.
<http://www.bluejeanscable.com/articles/shielding.htm>

Beldon has more info at:
<http://www.belden-wire.com/Catalog/TechInfo/TechTransfer.htm>

One test I made was to use my antenna noise bridge with an additonal 4:1
step down transformer to induce noise in a wire that I ran parallel to my
coax and triax feedlines. I compared several different types of coax. The crap
they sell at Radio Shack is marginal. It is better then twisted or zip cord, but still
sucks. For LF/MW/HF any of the real coax is very close in "leakage". I am
partial to Belden but there are othre good brands.

When I ran a 6' test "loop" in parallel, ~6" offset, with twisted or zip cord the
induced/injected RF noise overwelamed evrything except for th e very strongest
signals. With radio shack coax Ihad to place the test loop against the coax

for significant ingress. With belden braid and foil coax I could barely detect the
N, with Triax I couldn't detect it at all.

I tend to think of video as mid level , LF/MW/HF receivers are low level and transmitters
are high level. While similar, each level has different issues. For instance I might not
mind lossing 5% of a 100W 40M transmitted signal, but I damn sure don't want that 5W
to show up in my shack. A 10uV engress in video will not be detectable. A 10uV
engress in to my LF/MW/SW, or even VHF/UHF will cover all but the strongest
signals. Coax does not provide 100% isolation, so I take some pains to keep the
transmitt coax lines seprated from the receive coax lines and to insure they don't
run parallel for any significant length.

And spiral wraped shielded cable is about the worst choice you can make for either
video or RF. For very short video or audio runs, up to 1m, spiral might work IF there
are no RFI sources nearby. Spiral cables are cheap and every VCR/DVD that I have
seen comes with these cheapies.These should NEVER be used for even short
connections to a SW!

An example: I have a RF patch bay and one night theAC mains went down. I was in
mid rebuild so I wanted to patch my DX398 into my patch bay. I had just installed a
high end DVD and still had the cables in my garbage can. I grabbed the video (yellow
RCA) a patch to BNC, RCA to BNC, and a RCA to 3.5MM. I was amazed at how much
RFI from laptop was getting in to the DX398. So I dug out the correct patch cable, a
1M RG174 BNC to 3.5MM and when I switched cables the RFI vanished. In disgust
I cut the cables in half and put them back in the trash.

You are a deluded individual who is easilly swayed by propagandic conspiracy theories.
An clear sign of a weak mind with little to no respect for logic, morals and ethics.

It is fruitless to continue any further discussion with you until you have the humbling
oportunity to live under the likes of Mao, Saddam, Stalin or Hitler to name just a few.
I hope that someday every single Liberal Neo-Kommie has that opportunity.

It is sad and highly unfortunate that those that have experienced such evil are either
in a Communist gulag or have passed away from old age. It seems modern humanity
doesn't learn from history and easily succumbs to propaganda by those that wish to rewrite history.
Communist propaganda is alive and well and most effective on the internet.

Enjoy your Dreamland "Doctor" Artaud.

>so summing adjacent lines cancels the chroma. You can invert the signal
>and cancel the luminance.

Another way to say this is that the Comb filter works with NTSC because
both the lumiance and chroma have their high frequency (fine detail)
information in harmonics of the horizontal scan rate. But the color
subcarrrier frequency was deliberatly picked to have an offset of 1/2
the horizontal frequency so that the frequency spectrums of the two
signals occupy the gaps in each other's signal. By having a filter
response with a notch for every harmonic of the horizontal scan rate,
you can get the chroma information without the lumiance interfering.

Let's treat it the same as we treat that other thing protected even
before free press in the First Amendment (religion). You can have a
free press, but your press people can't do their thing on public
property or in schools, and they can't offer the paper for sale in
public, it has to be sought out quietly by those who want it.

> The irony here is that you would criticize those newspapers for telling the
> truth.

No, when the NYT or LAT tells the truth, all you'll see out of us is
amazed silence. We criticize them for telling lies and for passing
opinion as fact.

> In this case the truth is that the Bush administration, while
> bragging about the "free and independent" news sources springing up in Iraq,

The truly free press, which has originated with the Internet and other
available forms of mass communication not controlled by traditional
media, has been the best thing for Bush and the conservative movement
in general since the founding fathers created the Constitution. It's
really anathema to liberal lies. And that pisses you off, doesn't it?

It's interesting that you would point out Taiwan nationalism and absolutely
and completely ignore Communist Chinese nationalism of the 3,000,000,000
population under Communist dictatorship on the mainland. Not to mention 700
missiles targeted at democratic Taiwan by the Communist PLA.

Are you threatened by the 23 million democratic Taiwanese?
Or are you simply threatened by its democracy?

How is the weather in Pennsauken, NJ? Lots of mainland Chinese in New
Jersey.

Universal Radio lists the AOR WL500 loop antenna as discontinued and Grove no longer has the item listed. AOR Direct still has it on their page, but it is rather expensive buying in Sterling and shipping overseas.

Does anyone know if AOR has quit making this and is their still anyone in NA that has one in stock?

Gary Weber

@g43g2000cwa.googlegroups.com:

1. Quality table top grade with portable features, i.e. carrying strap,
feet on bottom and edge opposite to strap, 13.8 V Operation.

2. Sensitive tuner with SSB capabilities with the option to add noise
processors, Digital (ugh!), and other likely future needs without sending
the unit to the manufacturer to have them installed.

3. Hi and Low Z inputs for the antenna, ergo wire and coax connectors.

4. All knobs parallel to the face of the radio (i.e. no small knobs that
partially go inside of the radio).

5. All Buttons on the face of the radio.

6. Variable illumination for the display.

7. Front panel speaker with sufficient clairty and drive to avoid
distortion.

8. Jacks for recording (audio and control), computer interface, audio
line level out, and disconnect for receiver when unit is being used in
conjunction with a transmitter. With the reduction in the price of
memory, perhaps an internal memory that can record 2 hours of talk shows.

9. Variable programming options so that the radio can tune to several
shows on several frequencies at different times. Perhaps an audio
assessment circuit that prohibits the recording of nothing but static and
stops the tape.

10. Not made in China. $700 to $900 price range would be OK.

Dr. Artaud

1. Kennedy resigned. At that time Roosevelt asked him to continue as
ambassador. Kennedy had to nag Roosevelt to be relieved of duty.
2. Kennedy lost little influence at that time; he was well connected
with Congress and influential members of society.

> Had the Boston Republican brahmins been more hospitible to Irish Catholics,
> the Kennedys might have been as Republican as the Rockefellers. Joe Kennedy

I never did figure that one out. Bobby Kennedy worked for McCarthy, too.
Then again, I never got the feeling of extreme liberalism out of John F.
and Bobby as I have from the rest of that family.

>> He was
>> making too much money doing business with Hitler.
>

Okay, he wasn't doing business *directly* with Hitler, he was doing
business with the Nazi govermnent. That's well documented, and almost
any decent history book will regale you with the tale.

>> On the contrary, I'm pretty sure by this time Roosevelt had the WPA and

> America involved with the war.

It's very simple. Dollars spent on military aren't buying you votes
from the indolent. That's why the percentage of GNP spent on military
stuff has consistently decreased since WWII, while the %GNP spent on

welfare has consistently risen.

>> > Would that press also include such prominent isolationists as Col.

On the contrary, probably more than half the isolationists of the period
would have fit right in with the hippie antiwar movement thirty years
later. Ask an old person (while you can!).

> Many US liberals of the era were admirers of the Soviet Union and ended
> their neutrality earlier when the Nazis broke the Hitler-Stalin pact.

Liberals have always admired the Soviet Union. They're still trying to
establish such a government right here in the USA.

RHF,
Glad to hear you're not painting all with one brush.

Back to a radio topic, you seem to be enjoying your Eton XM1. While
not necessarily a fair comparison - how does it rate to the entry
level tabletops (of which I think the Palstar, Frg100 and R75 are the
only survivors)?

That's right. There aren't enough ground troops in Iraq to achieve our
goals.

> But in a teleconference with Defense Secretary Donald Rumsfeld, those
> soldiers kept their criticisms to themselves.

A good soldier never criticizes his superiors (1) officially to anyone
but his superiors, (2) unofficially to anyone he doesn't trust to keep
his mouth shut about it.

> Congressman Murtha agrees with these claims.

No, in fact, he directly disagreed with them when he said that he wants
us out of Iraq. Pulling troops out makes less, not more, troops in Iraq.
Even Murtha can handle that much mathematics.

> [snip self-aggrandizing Murtha quote]
> Congressman Murtha says incidents in Iraq are up around 350 percent
> from last year.

The armed forces, who keep official counts of such things, say otherwise,
that the number of incidents is way down.

704. Even more on antenna feedlines and matching to an antenna.

Newsgroup: rec.radio.shortwave
Date: 2005-12-04 19:29:37 UTC
From: r2000swler@hotmail.com
Message-ID: <1133724577.648441.231390@g14g2000cwa.googlegroups.com>
Source record: 52862

A few thoughts and comments about antennas and matching transformers.
I think I have beat the feedline topic to a eary death.

dxAce has a picture up of (one of?) his antenna(s).
<http://www.iserv.net/~n8kdv/ant5.jpg>
I choose this image because it is a better then typical installation showing
good construction technique and a site that appears to be well away from
AC power lines.

He mentioned in a post that he has a Doty style 9:1 at the top of a post with one
side of the primary, Hi-Z) winding, and one side of the Lo-z winiding connected to
the braid/shield of the coax feedline. The antenna wire is connected to the other
side of the Hi-z winding and the center of teh coax is connected to the other side
of the lo-z winding.

John Brynt has a pdf that shows several possible antenna transformer connections.
<http://members.aol.com/DXerCapeCod/z_transformers.pdf>

dxAce is either using C or D or a variaition as shown in the PDF.

I found that the ~20' vertical run of coax, even when I grounded the shield at the
base of the support, a tree, still allowed too much local QRM to get in to the system.

I used a piece of triax for a configuration that most resembles "A". The difference
being the gound side of the hi-z winind is carried through the outer braid of the triax
to a local ground rod at the base of the tree.

I installed a similar setup for a friend using RG174 and a 50' piece of 3/8" copper
tube. We both live in areas that have a lot of local QRM. The addition of the outer
shield greatly reduced the pick up of interferring noise such as TV HOT, florescent
lamps and odd digital signals from area PC routers and (a guess) cable modems.

The "trick" with modern receivers isn't to grab eery uV of RF, but to gther as mcuh
distant RF while minimising local RF/Noise reception.

In my antenna situation I found that by runing a "radial or "counter poise" directly
under my antenna I increased DX recption with no effect on local QRM. My friend
went with 3 parallel counter poises, one directly nder the antenna dn 1 ~1' on either
side . We both have the counter poise grounded at both ends of the antenna.

A link to a "how to"wind yourown tranformers can be found at:
<www.qsl.net/wa1ion/bev/bb_antenna_matching.pdf>

It won't have ''all the elements''. XM got hold of the old WABC
reverb machine and now uses it on their Sixties on Six channel.

Hi,

Well I'm listening to my RF-2200 here in south Jersey and I am hearing activity on 27.5 - 28 MHz SSB. It sounds like amateurs and some are in KY, VA but I haven't ID'd any callsigns.

I know 10m starts at 28.1 and CB ends at 27.40 but does anyone know what I'm listening to in this range from 27.5 to 28??

Thanks, Bill

You probably won't hear any callsigns, because these are most likely freebanders. Freebanding is illlegal out-of-band operating in the area just below, in-between and above the recognized standard 40 channel Citizens Band allocation, which means from 26-28 MHz.

Well thanks to all for the replies. I Googled "freebander" and now understand something I previously never knew.

Back in the late '70's I worked at HyGain in NE during the CB craze. We heard and knew of locals that modified their radios to work above 27.405 (Ch40) but I never imagined this would evolve into a new and welcomed hobby. It's great now to hear conversations that, back in the '70's were common on CB, when we all gave our calls at the end of conversations. (I was KMD5224 and met new friends with my radio). Late in the 70's things in the CB channels degenerated and only got worse as time went on. I gave up the CB hobby and never looked back. Now that freebanding has become the next phase of it, I'm thinking about joining a local DX group down here in NJ.

Thanks for enlightening me.

I'm wondering if any of you older guys can ID an old model transistor radio I am trying to hunt down.

In the late 60's I remember my older brother had an AM radio roughly about 6'X4' with a chromed speaker grill on the left side and a left pointing horizontal chevron shaped tuning dial window on the right side. There were thumb wheels on the right side of the radio for volume below and tuning above. This radio came with a standard thick brown leather case that had perforations for the speaker, and a chevron cutout to match the tuning dial window. Four batteries were housed in a plastic holder that plugged into a wire lead similar to a 9 volt battery connector in the back of the radio. I seem to recall Kmart selling them up until the late 60's.

Can anyone remember this model and maybe a link to a picture?

New and welcomed hobby?

Freebanding is illegal. And it's not without an interference penalty, interrupting legal communications by licensed operators on those frequencies.

I don't often get into the FCC bashing mode, but putting Citizens Radio Service on 11 meters was one of the most bone headed decisions to come out of Gettysburg. Citizens Radio Service was to be local only, limited power, short range communication. It has a radius limit in the charter. And yet, they put it on one of the best propagation bands in the spectrum. When I was experimenting with CB in the mid 60's, I had an Arvin HT with 100 milliwatts, and got to chatting with a licensed operator about nothing in particular. (Which I later found out was a violation of his licensing provisions.) He was aware I was working a license free HT, but he thought I was just a local kid. I thought he was the CB station at the end of the block. We were both stunned when we realized that he was in North Carolina and I was in Florissant, Missouri.

Most of the time, CB WAS local. But at least once a day, the skip started rolling in, and it was no holds barred. To expect communications to remain local under such circumstances, was absurd.

When CB caught on, and the bands became overcrowded, there were mod shops in every other strip mall in my area. And type accepted equipment was 'fixed' to work out of band for a nominal fee. When informed that such modifications were illegal to put on the bands, users usually either laughed outright, or came back with a level of rationalizations

why it was NOT illegal that would have qualified them for Congress.

Freebanders grew out of this mindset.

And they defend themselves with a vengeance.

But make no mistake. Freebanding is illegal. On several fronts. And
it does affect other services. Embracing freebanding does not make you
an enthusiastic hobbyist. It makes you part of the problem.

That sounds like a Trancel (Toshiba) I had in the early to mid 60's.
I may still have it in a storage. I'll take a look for it. If it's still
around, I'll put up a link to some pictures so you can verify it's the
radio of which you speak.

I am trying to hunt down.

one of us older guys? take a look at Sarah's web site. she has
her collection on line. over 1500, tx radios. if you can't find
a pic there, you are not going to find it.

http://www.transistor.org/collection/collection.html

hope that works...

Excellent antenna, the WL-500, and it's a pity that it has been discontinued. I have one, and it's an antenna which I would heartily recommend, especially when you're in need of something which can be used on the run. It's decent on batteries, too.

I don't know that you'll find any remaining stock of this product in the states, but I know someone who ordered from AOR UK, where (at least a few weeks back or so) remaining stock of the WL-500 was still to be found. You will end up paying a bit more, however, as you yourself noted.

Peter,

I cannot argue your points and I do recall those stories about (illegally) modding the CB's. I kinda thought, in the back of my mind, that freebanding IS illegal as I read the freebander web sites. But it sounds like it's become a widespread occurrance and one that can not easily be stopped. But one of the web sites argued that the participants were beyond and above the CB mentality and, not that it makes it right, it seems that freebanders abide by some sort of rules and somewhat loose regulations, albeit non-governmental.

I changed my mind...I'll not join them; I'll just listen in.

You are hearing operators operating illegally on the so-called
'freeband', there is no freeband as these frequencies are allocated to
other services. These are refugees from the cb band who are either to
ignorant to know they are operating on frequencies they are not
authorized to use, or the "I bought this here radio and I can operate it
anywhere I want to" mentality. These are the same ones that encroach
into the ten meter amateur band. They somehow have the misguided notion
that if they own a transmitter they can transmit where ever they please.

It is fruitless to continue any further discussion with you until you have the humbling opportunity to live under the likes of Mao, Saddam, Stalin or Hitler to name just a few. I hope that someday every single Liberal Neo-Kommie has that opportunity.

It is sad and highly unfortunate that those that have experienced such evil are either in a Communist gulag or have passed away from old age. It seems modern humanity doesn't learn from history and easily succumbs to propaganda by those that
wish to rewrite history. They are doomed to repeat it!

Communist propaganda is alive and well and most effective on the internet.

Enjoy your fantasy "Greg", your "real name".

I am trying to work up my nerve for a certain on topic flame war over
"power dividers", signal spliters, "passive multiset couplers" or as us
engineers like to call them, "hybrids" and thier possible use in a
"normal"
SW environment.

It is rather counter intuitive.

I am still trying to find a valid, acceptable "on line" refference for
typical
natural HF noise floor. Step one was to get everyone to agree that a
good
hybrid only introduces 3+dB of loss. That was way too much fun.

Terry

So concerning the "transfer Impedance" link to the Belden site, the
chart of the various cables shows some of the expected (by me that is)
shield performance. The shielding improves at higher frequencies due to
the skin depth of the shield was expected but by around 100 MHz the
shielding starts getting worse again. Can you explain this apparently
consistent result over a number of different cables? It must be due to a
physical characteristic of coax cable construction. Maybe the frequency
response of the cable?

Tracy Fort's drunkenness, necrophilia and a deceased seventy two year
old cancer victim, who happened to be my mother:

==========
==========
I'm not drunk. I haven't finished my first 12 pak yet.
I'll get there and when I do it's back to the cemetary.

She gives great cancerous BJ's.....thanks Canucky boy!

haha...thanks.....gotta go grab another beer.

You and your dead ass mom might be interested in the last post I made.

How far north did the Katrina effect? I saw someone's mom floatin down
the mighty Mississippi!

Dug her ass right up! She was too damn ugly to have sex with before
she died. The old bag o bones fell apart in my hands! She didn't
complain about much either other than the lousy sex she got from those
foursomes with you, Mike and her husband.

love dem bones....dem bones....dem bones

Please I need DICK! I need my poor ole dead momma too. She needs
to cahnge my diaper. I shat it when she croaked and nobody will chenge
it for me.

Hey Mike! Please come over and lick my ass! Me so Horney! I want
to take my tounge and run it in and out your anus and taste your
creamy chocolate goo upon my lips. Man am I hot!

I have your mom's legbone right here. I kept it as a momento ya know.

rattllin' bones!

squeek...squeek...

Skeleton rides 50 cents a pop! If you can stand the smell....I wonder is she stunk that bad in life?

hahahaha....I'm still laughin' at your sorry ass family! This is funny stuff!

She is very fresh but not that fresh!

hehe...I love dem bony women....rotten to the core.....

um...umm....good!

I love it....did she do it for you too?

Please accept my apology for abusing her. I'm sorry that I did not toss her back into the black depths that she came from. Next time,I will be sure to take care of that. I promise that I will refill the hole with the dirt that came out too. In addition, I will re sod the plot at no additional charge. Let me also apologize for the milky substance in her left eye socket, that was an unavoidable accident. please feel free to include this post in your sig file!

You might as weel keep it up there...I love the ole boney bitch!

Dem Bones! Dem Bones! Dem Bones! I loved playing dem Bones!
Dem Bones! Dem Bones! Dem Bones!
I loved playing dem Bones! I ran my fingers uo and down dem bones and she began to come alive!
I played dem bones like they never been played and she smiled for me all the day.

Pork and bones....

DON'T HURT CANADA! I'll miss those nights with the ole bony lady!

The most fun I ever had!

Sporting a new moniker (GraveDigger) just for you and mommy...

He knows the inside of his mom's boney butt! hahahaha

hahahahaha......Can't you come up with your own material?

hahahaha.....when you got thru lickin I was stickin.....

Haha...I laugh eveytime I read my great material! Keep postin Canadork

How's Mommy?

hahahahaha....keep postin that sig girlieman!

==========
==========

This .sig file will continue until Mister Fort posts a sincere apology to all cancer victims and their families. His refusal to do so says more about his attitude and upbringing than any of his thoughtless and hurtful postings in rec.radio.shortwave. He seems to be very proud of the fact that he can buy expensive radios using the refunded deposit money from his empty beer containers and has frequently posted the fact.

It appears he is well on his way to purchasing his next radio. Anyone caring about his well-being should mention the good work of Alcoholics Anonymous to him. They may be able to help him restore his self respect and dignity so he stops posting this drunken garbage on the internet.

I wonder if his wife and children know what their Hero does at night.

http://www.washingtoncitypaper.com/special/2005/cb1202.html

There's an ariticle about CB RFI in this week's issue of the _Washington City Paper_. The CP does not make its articles available online for long, so I'm archiving it here. R-rated for strong language at the end.

Dec. 2-8, 2005
Citizens' Bane
by Ryan Grim

Radio broadcasts commandeer neighborhood's electronics.

On Saturdays in Rosedale, a leafy neighborhood northeast of Capitol Hill, roll call begins at 9 a.m. "Five-oh-one, One-Eyed Jack, Cowboy, Cowgirl," pierces a loud voice through the area's TVs, telephones, radios, baby monitors, and computer speakers. The morning broadcast, running through a litany of CB-radio handles, continues for exactly an hour.

The voice, according to neighbors, emanates from the corner of 16th and Isherwood Streets NE. From there, they say, an operator (or operators) has been sending high-powered broadcasts out for years, damaging and disrupting electronic equipment throughout a several-block radius.

Patricia Taylor, who lives on the same block as the CB broadcast station, says she's heard the broadcasts-or half of them; only the local end of any conversation is audible-for years. She went to confront a suspected CB'er at one point about a year ago; she says the man she spoke to denied ownership but assured her he'd tell his "cousin" to take it down. The broadcasts have continued unabated since, always on Saturday mornings and sporadically throughout the rest of the week.

Taylor says that the CB is not without entertainment value, though. "One time I was talking to a friend [on the phone], and you could hear [a CB] conversation clear as day, but just one side. He was talking about some man who had some woman and another woman, and, well, his end was pretty juicy," she says.

Residents have different theories on the purpose of the broadcasts, but seemingly all have stories of permanently damaged equipment or at least a ruined ballgame or TV show. "One time," says a neighborhood man who asked to remain nameless, "I got so mad I threw a rope around [the antenna] and ripped it down. He just put it right back up."

In the summer of 2004, residents thought they finally had some peace and quiet. Keith Jones, a legal assistant whose back yard had a clear view of the CB antenna, started a petition that brought in the Federal Communications Commission (FCC) and District authorities. In August 2004, FCC agents served Tyron Conley, a resident of a two-story brick apartment building on the suspected corner, with an "administrative notice of violation" for operating with too much power. For a brief time, residents got a respite from the broadcasts.

But not for long. By that October, the roll call was back, along with the regular conversations-which, neighbors say, weren't always family-friendly. "It was freaking my kids out," Jones says. "They used very degrading language to black women."

That was enough for Jones, who moved his family out of the neighborhood, to Anacostia; he cites the CB as the major reason for his desertion.

After the broadcasts reappeared, residents who remained behind were befuddled at first, unable to determine how the man was broadcasting without an antenna. Until, that is, one resident, who wishes to remain nameless, heard about it the same way he heard other details of the neighbor's life: through his TV, on Channel 4. "I heard him telling someone that he'd had to take the antenna down but he had put it back up in a tree next to his house," he says.

Sure enough, an antenna protrudes about 10 feet from a three-story-tall spruce a few feet from Conley's apartment building. From the tree, a black cord can be seen running into a window of a second-floor apartment. A green Mercury Sable with a 6-foot CB antenna sits in the backyard driveway.

One weekend, three men are standing on the corner opposite the offending building. They, too, have had problems resulting from the antenna, but they are not keen on talking about it; like many residents in the neighborhood, they've requested anonymity.

One man says that the broadcasts broke his previous computer and that he can hear conversations coming through the speakers of his new one. His friend says he has also had problems with the signals in his TV. "I don't understand," he says. "This is the type of shit country people do, but not around here."

A pair of neighborhood kids say they have confronted a tenant in the building about the antenna, asking him to stop disrupting their favorite TV shows. "Every time I tell him to cut it off, he says, 'All right, then,' then keeps on going," one says.

They won't be getting much help from the building's owner, either. Art Panero, the landlord, says he has spoken to one tenant, Conley, in the past about an antenna but no longer deals with the issue. "Every time I tell him to take it down, he moves it a few feet off my property," he says, insisting that it is now the District's and the federal government's problem. "I don't even own that tree. The

District does." (According to a District Department of Transportation spokesperson, the tree is on private property.)

Besides, Panero says, the feds ought to be taking care of the problem. "I talked to some bureaucrat over there, but they didn't do anything," he says. "It's not really a landlord/tenant issue. It's a federal regulation."

Repeated attempts to speak with Conley at home were unsuccessful; a woman and a boy at his apartment said on separate occasions that Conley no longer owns a CB or an antenna. Instead, Conley's upstairs neighbor claims to be responsible for the recent broadcasts.

The man, who refuses to give his name, lives in the unit that receives the cord from the tree antenna, which he says is for his 11-meter-bandwidth radio. He confirms that Conley no longer owns a radio. When first interviewed, the man denied using the CB. "I haven't used it in months," he said, "so it couldn't be me they're complaining about." During a second interview, though, the man said he has in fact been using it on weekends, as well as occasionally during the week, but that he keeps the power low enough that it won't disrupt his neighbors' electronic equipment.

Though he admits Conley's antenna attracted the neighborhood's and the FCC's ire, the man says his setup is in compliance with the law. As proof, he says, he has a letter from the FCC certifying his compliance. He declined to produce the letter for a reporter's inspection.

Since Jones left the neighborhood, the community has been less organized against the CB. However, the broadcasts have drastically increased in the last month, and Letitia Faison, who lives within a block of the antenna, says she is restarting the neighborhood's fight and will soon contact the FCC for yet another inspection.

The antenna, though, won't go down easily. Regarding the neighborhood's complaints, the CB owner is adamant: "All the people in the neighborhood-fuck them. That's what I say to them. Fuck them." CP

The you can work the BFO against the 4 kc mechanical filter bandpass
and get really good ECSS on the R-390A. The skirts are steep enough
to allow you to slice off the carrier and still leave a nice fat
signal to feed off the BFO.

I've experimented with numerous low noise antenna receiving configurations at this QTH and finally settled on a 90 foot "Windom" configuration where the antenna is fed with 50 ohm coax at the 35% length point with a 6:1 impedance transformer. The high-Z winding is 10 turns on a ferrite toroid and the coax is connected to 4 turns on the toroid. There are no earth grounds and because of the separate windings the antenna is galvanically isolated from the coax. The wire is suspended about 6 inches above my west concrete wall which is about 5 feet high. This antenna has be the most effective antenna with minimal noise for the 2 to 30 MHz bands.

I think that was me arguing with you on the news group. I just was not
paying attention to the power loss due to the fact that I used the
resistive type in small signal work and just did not pay attention to
that aspect (power lost) of dividers.

The magnetically coupled units were a little over 3dB and the resistive
were a little over 6 dB due to the resistor losses best case(s). The
3dB point being half the power because the source is divided in two.
The resistors used in the "resistive" units burn half the power (again)
in order to cause the impedance thru the splitter to look like 50 ohms
on all ports with the proper source and loads attached otherwise there
would be large reflections. The magnetic coupled units just transfer
the load impedance thru the unit so as long as the source and load
impedances match up that is all that is required. Well, the path
through the windings also is supposed to be the same impedance for
higher frequencies at least.

What is counter intuitive to you about either kind of
splitter/combiner?

On the news group we should take care to reference typical natural HF
noise floor and receiver sensitivity in dBm so the addition of
components like splitters can make sense in an antenna system way.

I'm at the beach so a few miles away. The west downtown Ventura was
covered in smoke. I turned around that first morning of the hill fires
at the pier on my morning bike ride.

I was out sailing today in the Ventura bay area and you could see a
green belt of homes and lawns around the base of the mountains behind
Ventura with the hill sides above all blackened.

I bought the Kaito 1103, pretty much the same radio.
The Degen will most likely require you to use a voltage converter unless you
are
in an area that uses 220.
I like the radio, first one for SW I have bought in a long time.
Has nice reception on the FM and AM bands.
Still haven't gotten the hang of using the SSB feature, though.
Good SW reception even with the attached antenna, and
a connection for a longer accesory antenna is provided.
Has simulated analog tuning, which I like.
Has search as well, when you hold down the band+- buttons.
Have noticed an AM station bleeding over onto another AM station that I
listen to.
Does it with my ancient Sony walkman as well, so there is
some issue with the offending station, I would imagine.
It is somewhat of a battery hog.
Comes with rechargeable batteries and charger.
The manual and radio markings are in Chinese.
There is an English manual in PDF format.
The seller is liypn BTW.

In all applicable seriousness, rare in my house (or so the chihuahua tells me) I've had trouble deciding with radio to drag with me to the North Woods. If it's not my Sat 650 Professional, it's my SW-8.

SW-8 isn't the most sensitive off it's whip, but with random wire, or portable active, it's great fun when it's just me and the dog at the cabin. When it's not just me and the dog, I generally don't notice if there's a radio or not.

> Now that
>freebanding has become the next phase of it, I'm thinking about joining
>a local DX group down here in NJ.

Next phase? The freebanders have been there for years and years.
The main mindset of the freebanders was to get away from all the
"ruckus" on the legal channels, and have a quieter play to talk, and
thus play "serious radio boy". LOL... I've got many friends that have
talked there, and I've even talked there myself on a few occasions
back in the 80's. The "freeband" was mainly taking the "secret" channel
thing a large step farther. IE: many used to like to talk on 22a, or
whatever it was, and many often talked on the channels below the
legal band. But those got crowded after a while, so the push was
upward towards 28 mhz. Very few actual "freebanders" will talk on
the 10m ham band. They know better, and stay away. Most will
hang out in the .405-600?? range, but some do go higher. Here
in Houston , 27.800 used to be a real popular freq that was used
by "serious" Cbers, and hams that wanted to chit chat with the local
CBers. It's mainly the truckers that are plopping on 10m ham band,
and that is a fairly recent thing. .
They don't care where they go, as long as they can talk.
Myself, I don't see much incentive to hang on the freeband, when
getting a legal ham ticket is so easy these days. Who would wanna
be stuck from 27.405 to 28.000 when you can have 28.000 to 29 plus
legally. :/ Not to mention all the other bands. Sounds like to me,
you would be better off getting a ham ticket. Much more useful being
you aren't tied down to a band that is dead half the time.
Even a legal ham on 10m is pretty limited this time of the solar cycle.

BTW.. .Many freebanders use ham radios and have VFO's, etc..
I've seen some freebanders that ran better gear than I do on the ham
bands... :/ IE: Icom 756pro's, etc, etc...Whatta waste of a radio...:(
But some use modded CB's...

Here is a wish list for the "perfect" receiver.

My IC-706 coupled with a laptop can do many of those...

1. specialized search functions- be able to define the search band.
(like a VHF scanner)

I have 4 scan modes...Better scanner, than some scanners...
The receiver itself is better than most scanners for sure....

2. build in audio recorder with squelch- an hour recording time would
be nice. make it uploadable to PC.

Have this as long as I have the laptop..

3. upload/download freqs/text-

Yaaaaaa, as they would say in Fargo...

4. solar/crank recharger-

Not this, but I never run solar yet...

5. dc to daylight range-

pert near...I can receive from .30 to 200 mhz straight line,
and then from 400-470 mhz straight line. It's not total
coverage, but I can listen to about anything I want. The
exception being the military aircraft band on VHF..

6. video reception-

Yaaaaaaa, but what type? I can do SSTV, FAX, etc, etc on
HF. Can run full blown ATV on uhf...

7. morse code translator- hey that's a good idea!

Thats built into my brain... :/ Option not needed..

8. foreign language translator-

If they don't talk no english, I don't need to listen... :(

9. GPS postioner-

Yaaaa, if I couple a GPS with the laptop...

10. phone jack for remote use-

Yaaaaaa... Can be rigged up...Not that I
have much use for it...

11. the whole thing the size of a paperback

Not too far off... It's bigger than a paperback,
but smaller than many books. It's about half
the size of my ARRL antenna handbook as an
example.

What would your radio do?

What it does...

http://www.icomamerica.com/products/amateur/706mkIIg/

They make ones even better, if you wanna cough the cashflow...
IE: the kenwood TS-2000 is a good do-it-all radio with wide
coverage. But...It's a bit bigger than the 706...
Also, the 706 has a detachable faceplate. I've been
eyeballing the IC-7000 that is supposed to be coming out.
It's like a 706 on steroids...Color "pro" style readout, more
lights, blinky things, etc... Will probably trade to one of those
for a mobile if the price drops down...Although a TS-2000
is tempting...The 2000 is a handy radio. Can crossband
repeat, work sat's full duplex, etc, etc.. I've talked on 160m
before by talking across town on UHF, using the 706, to
a TS-2000 that received me on UHF, and then retransmitted
on 160m.. Being he had a big amp on the ts-2000, I was
actually louder on 160m going to his radio, than actually using
mine on 160m, being I don't have a amp on 160m.. :/
The day will be soon when you can get all that in a radio I bet..
If...., there is a large enough market for them... Radio in general
is kinda dropping off vs the internet, etc, etc...

You've got a couple of serious portables there. In a couple weeks I'm taking my family for a short, pre-Christmas vacation on the beach (Anna Maria Island, Fla.). My main portable is the modest but venerable RS DX-440. The last time I took it to the beach I heard more DX than ever before on that radio, using a 24' wind-up wire antenna. Great fun.

As an example if your wire antenna is #18 wire about 10 feet off the
ground then the impedance of the wire is around 500 to 600 ohms. You
could probably use a higher ratio transformer like 11:1 instead of ~ 6:1.

I would use 13 turns to 4 turns instead of 10 to 4 turns.

Well, these are only two of the many. House full of T/O's, and
Hallicrafters clones. A handful of Grundigs, A couple of Panasonics, and
one lonely Sony ICF-5900.

About the only portable I've not played with is the RS badged
Sangean. Any of them. I had an ATS 803, but an old high school buddy was
looking for a radio, so I gave it to him.

I did take an RF-B65 to the Gulf Coast recently, and got to listen in
a relativelly noise free environment.

Yeah, there's nothing quite like a good listening environment and a
good radio.

As an example if your wire antenna is #18 wire about 10 feet off the ground then the impedance of the wire is around 500 to 600 ohms. You could probably use a higher ratio transformer like 11:1 instead of ~ 6:1.

I would use 13 turns to 4 turns instead of 10 to 4 turns.

This will vary to freq though. I think quibbling over the transformer ratio, or actually, even using a matching transformer at all, is usually overkill. Often a 1:1 will be better on some bands.

I modeled his antenna just now to see what happens per band changes. I fixed the feed at 33% offset, as that was about the 1/3 point across the wire, and should be close to his 35% as far as the example.

Band-------Impedance-------SWR if using 50 ohm coax to feed.

2 mhz , 0.0894 -J 1762.870, 100-1
5 mhz , 6.2812 -J 140.548, 70-1
10 mhz, 23.7054 -J 248.378, 54-1
15 mhz, 4523.4000 +J 3621.610, 100-1
20 mhz, 111.780 -J 461.406, 40-1
25 mhz, 87.0032 -J 302.004, 23-1
30 mhz, 1584.920 -J 1004.170 , 44-1

The feed impedances are all over the map just depending what band you are on. Trying to get the "perfect" transformer ratio is generally a waste of time. Not to mention that adding the transformer will rarely increase the actual s/n ratio. On some of those bands, a 1:1 would actually be better... His case is a good example of good decoupling. No ground was used either. I love it...:/ It's not the use of a transformer that makes the antenna good, or even gives any improvement in actual s/n ratio. It's the decoupling. He could use a 1:1, and it would probably work just as well in general.
I could give the numbers concerning coax feedline loss vs freq vs length, to prove my point , but I'd have to recalculate all the numbers.
I did that once, and posted it here, but I'd have to google it up to find it. That was 2-3 years ago... A transformer is rarely needed for any kind of decent radio. The feedline loss is just not enough to actually degrade the s/n ratio. Only in rare cases of totally lousy, thin, waterlogged coax that was 1000 ft long might this be the case. Transformers

are nifty devices, but for general HF use, all they do is
pump up the S meter. On the lower HF bands, coax loss
is so low as to be practically ignored as part of the equation
when receiving with a 90 ft wire. Ditto for 30 mc, with any
average setup. The loss is greater at the upper end of the band,
but it's still rarely large enough to reduce the s/n ratio.

>Wouldn't have a plastic cabinet cabinet,that's for sure!
>cuhulin

The front face of the 706 is plastic covered, but the radio is
all metal otherwise. The body of the radio actually is the heat
sink for some of the regulators, etc in the radio. There is a heat
sink in the back for the finals, and there is a small fan
inside that draws air thru the middle when the T-stat says
it needs it, or I key the radio to xmit. If you pick up the
706, it's like a solid brick nearly. Pretty hefty for it's size.
But...I like that. It's built well. One reason why I chose it
over the "equal" yaesu FT-100 when I bought it. The 706
seemed a little more solid, and I didn't like the pigtail antenna
connectors on the FT-100.. To me, I kinda consider the 706
a geenuwine miracle radio. Or at least, I know for sure, back
in the 70's, we often thought about just this subject, and the
"dream" radio had the features of the 706, or equal, but...
We never dreamed it would end up as small as it did... :/
Whoever designed the 706 radios was some smart cookies.
They did a bang up job, and you have to use it a while to
appreciate just how well they designed the radio.
Sure, it's not the best thing out there, but for its size/price
it's pretty amazing. Hooked up to a good speaker, or my
audio amp, it sounds about like a 756... No joke..has good
audio.
Real nice for MW, if you like kinda wide filters, which I do..
I don't like narrow filters for MW...Cramps the audio too
much. But the 706 sounds great on MW or SW AM for
general use.. The only place where the 706 falls down is on
LW...It's usable, but compared to many other radios, it sucks
on LW.. MW or above, it's fine.
MK

Hell, no. You can buy a newspaper in the Federal Building; you can't
practice religion there. They should restrict the press the same way
they restrict that other thing that was protected first by the First
Amendment.

> And you can pray anywhere
> you want.

Bullswozzle. You can't pray in school. No, not even all by yourself
where people can't see you. And you'd better not pray on public property
where any ACLU people can see you.

>>> The irony here is that you would criticize those newspapers for telling the
>>> truth.
>>
>> No, when the NYT or LAT tells the truth, all you'll see out of us is
>> amazed silence.
>>
> Amazed silence? That would be sweet! But the subject of this thread was
> the placing of paid propaganda in so-called "independent newspapers" in
> Iraq. Are you saying that isn't true?

I've yet to see evidence that anything untrue was in those articles.
Until then, it's no worse than the liberal American press spreading
the propaganda of the Democratic Party.

>> We criticize them for telling lies and for passing opinion as fact.
>>
> Fair enough. There's plenty to criticize in bot the liberal and
> conservative media.
>>
>>> In this case the truth is that the Bush administration, while
>>> bragging about the "free and independent" news sources springing up in Iraq,
>>> seeks to control what those sources report.
>>
>> Control? No. Persuade them to print some good stuff about us? Sure, in
>> the ages-old way of persuasion in the middle east; we crease their
>> palms with silver.
>>
> Agreed. But dishonest, nontheless, when it's done covertly. It gives the
> impression that the story was generated by independent observers.

What "covertly"? No one asked and there was no reason to tell them.
Have you criticized the toilet facilities over there? Have you even
asked what they're like? So why are you criticizing our government
doing business their way when you don't criticize our citizens going
there and doing toilet duty their way? Facts is facts; you can go back
to movies of the 1940's and see characterizations of arab people
demanding to have their palms creased with silver to do a favor,
there's certainly nothing new about it in the 21st century.

>>> A free press has always been
>>> anathema to the Bush administration because of all the administration's
>>> devious pursuits and corrupt practices that don't hold up well to public
>>> scrutiny.
>>
>> The truly free press, which has originated with the Internet and other
>> available forms of mass communication not controlled by traditional
>> media, has been the best thing for Bush and the conservative movement
>> in general since the founding fathers created the Constitution. It's
>> really anathema to liberal lies. And that pisses you off, doesn't it?
>
> No, I enjoy the give and take available to all of us on the Internet. But
> there is a lot of crap, and you really have to examine what is offered as
> factual. And I don't see how Bush is being helped by the Internet. Sure,
> there are a lot of conservatives venting their rage against "Liberal
> Neo-Communists", but so what?

News gets around. We now get details on stuff we'd never have had
any idea had ever happened, like Gore causing an international incident
by telling racist jokes in Indonesia, or getting lost ten feet into the
woods while taking a leak, or someone forging evidence against Bush
and someone else going ahead with it even knowing it was forged. Before
conservatives developed means of communication that didn't depend on

the traditional media, we were stuck with whatever the liberal press
wanted us spoon-fed.

I'm surprised. WLS was frequently weak, noisy signal for me when I was
in the northwest suburbs of Chicago. I've been told they have a bad
grounding system at their antenna and are too cheap to fix it.

Just as today's 2.4 GHz band is open territory because it's shared with
microwave ovens, yesterday's 27 MHz was shared with diathermy equipment,
which was in wide use when CB was new but had fallen into disuse by the
mainstream by the mid sixties.

811. the truth about Radio-mart on eBay, judge for yourself

Newsgroup: rec.radio.shortwave
Date: 2005-12-05 07:38:11 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <OLmdnSmTqeH7cw7e4p2dnA@comcast.com>
Source record: 52769

a couple of weeks ago I listed on eBay a broken FRG-7700 receiver. the buyer
was gottahaveit1995. it was paid for and shipped to Martyn Allison.
today, Radio-mart has listed that identical FRG-7700, including the CD I
made and included. he made up a story that was not true that he had sold
this receiver in working condition and it was returned broken.
Radio-mart also happens to be Martyn Allison. and this is not the first time
he bought something from me under gottahaveit1995 and sold it two weeks
later as radio-mart
the auctions in question are: 5837723543 and 5833316809
judge for yourself how honest this person is and if you can ever believe
anything he says in his auctions.

I should have added that he did not mention that the analog dial light is burnt out and there are some bruises to the case that preclude it from being called excellent as he has done.

I have the serial number of the one I sold if anyone wants to compare what he says it is to what I sold if they want further proof.

Serious idiots is more appropriate. In all fairness, once they step outside the allotted 40 channels for the citizen band radio service they cease to be CB'ers and begin to be criminals. It's just the general thoughtt since 99.99% of these illegal transmitters are non-punished, most the "freebanders" perceive the band as not being used, and many of the users have an illusioned mindset that they're better than those still down on the "regular 40".

>. It's mainly the truckers that are plopping on 10m ham band,
>and that is a fairly recent thing. .

I'm not sure how recent it is. I've been dealing with idiot truckers bootlegging on 10m since the 80's. Many bootleg in the cw section of the band and stand out quite noticeably. I remember one idiot trucker popping up on top a CW station from Thailand just on in the static but copiable and having heard my call come from him and ready to swap signal reports, his moronic audio toys (echoes, reverb, beeps, amplified voice) totally wipe out any chance anybody had of working that rare one on 10m cw.

I think most people are wise to the Radio-mart scam, but it's good to post reminders for new people. I have "gottahaveit1995" on my blocked bidders list, and Radio-mart is excluded from my saved searches.

By the way, that's one of his two most common stories. The other one is about taking a radio in "as part of a parts trade", when in reality he just bought it off eBay.

Thank you Stewart. The Ace gave me the city name earlier. Juelich.
I knew it was Germany from the schedules at www.primetimeshortwave.com
but failed to check bc-b05.txt at www.eibi.de.vu which would have
told me the transmitter site without me having to ask.

Thanks again to you and dxAce for helping me out, and Happy Holidays to everyone
who sees this.

The current edition of MediaLine Radio is now available on-demand at
http://medialineradio.com .

This edition includes:

* Media news.
* Repairs to the US space shuttle.
* An episode of the classic American radio programme, Suspense.
* The shape of space-time around Earth?

The next airings of MediaLine Radio are as follows:

Saturday 10 December, 1400 UTC, http://mp3.nexus.org
Saturday 10 December, 2000 UTC, http://mp3.nexus.org and 5775kHz

The programme also airs via WorldFM, Tawa, New Zealand
(http://www.worldfm.co.nz).

Too bad there's no free and independent press in Iraq. I guess it doesn't fit the neo-cons' idea of "democracy".

BTW, what did you conservatives do before the Internet? Haven't you heard of William F. Buckley and National Review? George Will? Cal Thomas?

841. Re: Even more on antenna feedlines and matching to an antenna.

Newsgroup: rec.radio.shortwave
Date: 2005-12-05 14:09:49 UTC
From: fcathell@msn.com
Message-ID: <1133791789.605589.102750@o13g2000cwo.googlegroups.com>
Source record: 52900

RHF - The antenna wire is suspended above the concrete wall and the average height above ground is, as you stated, about 5.5 feet. The 50 coax cable connects to the wire thru the xfmr and runs vetically down the wall and then is burried underground and runs another 30 feet to the house wall and into the radio room. The coax runs exactly perpendicular to the wall (and wire). The wall is actually stuccoed cinder block and has vertical rebar in it about every few feet. I tried different turns ratios on the Z-xfmr but did not see a significant difference so I settled with assuming a 300 ohm Z average at the 35% point as some Windom articles have stated. As you mentioned, there is obviously no real basis for this when using it as a general, all-band receiving antenna. The other issue is where my "ground" really is here in dry, dusty AZ. I have dug down over 4 feet in some parts of the yard and there is no moisture there either! So trying to define a ground is useless also. The bottom line is that even though my 250 foot end-fed ham antenna will produce higher signal levels most of the time, the "wall Windom" has dramatically better S/N and definitely out-performs the long wire almost consistently. Another thing I did was design the Z-xfmr so that the inductive reactance is about 50 ohms at 3 MHz on the coax winding. This helps the response to roll-off as you approach the MW band to prevent IMD issues. Granted, it is a single pole roll-off, but it does help because some of the local BC stations become problematic with higher reactance on this winding. Less turns also makes the self-winding capacitance of the antenna winding lower so antenna performance doesn't suffer at 20 - 30 MHz. By the way, I tried many variations of the common end-fed wire with 9:1 Z-xfmr and I was unable to get as low of noise figure as with the Windom because of the noise currents in the coax shield caused by assymetrical ground issues. At the present time my receivers use no ground connections at all. And for those apartment dwellers, forget about using the AC outlet ground terminal (green wire) for a ground. It's usually a source of massive noise!

I had inteneded to be able to post on line reffences to every dB figure
I use,
but I had to go open my big mouth first.

The common wisdom is that 4dB, I am calling it 4 becuase it is
slighltly over 3dB,
of additonal loss will impact reception of weak signals. In most
listening locations
the limit to recption is the local noise floor. Even for a modest
receiver like the R2000,
the receivers noise floor is significantly below the atmospheric noise
floor. I have a
1970 copy of ""Reference Data for Radio Engineers", but I am trying to
find a on
link refference that everyone could see. My "Refference Data" says the
winter noise
floor in my location should be around -111dB with a 3KHZ BW at 10MHz.
Sherwood Engineering rates the R2000 as having a -130dBm noise floor in
SSB, nominal 3KHZ
BW. I have checked 5 R2000s and they all at least meet this minimium
spcification. Most are slighlty better.

So disregarding any local QRM, we have:
A system noise floor of -111dBm.
A receiver with a noise floor -130dBm.
We have a margin 19dBm.

It is my contention, based on several years of tests, in a laboratory,
and "real world"
tests overthe last 6 months, that adding an additional 4dBm of

attenuation will have
"no" effect on reception.

Repeated tests with a remote RF source, a micropower ISM/HiFER
"beacon",
with the beacon RF output reduced to where the audio is barely just
intelligible
show that an additonal 4dB of loss has not effect.

A friend's daughter is a speech pathologist/therapist. She recorded a
20 pairs of
words to test for "Percentage Articulation Loss of Consonants" (AKA
%AlCons).
Words like copy and coffee.

I edited these into sets with each word being first in one set, and
second in another.
Each group consisted of 4 words with a modulated CW group ID at the
end. The
procedure consisted of reducing the RF level of the beacon to the
minimim level
that I could get 90% accuracy. Then adding the 4dB pad to see if it
effected the
accuracy.

"Common sense" argues that any additional loss whould have an effect
on
reception. My test results proved to me that that is just not true.

If one has a locaton where the noise floor approaches, or is lower
then, the receiver
noise floor, then and only then will addtional loss effect reception.

I worked out a formula but ASCII is very poor for sub/super-script.

A wordy version could be:
As long as the additional loss in dB is less then the margin of
RecNF-AntNF, then
reception will be uneffected.

This set of experiments also showed that the local noise floor is the
single most
imoportant factor in SW/HF recption.

For instance, if the expected noise floor is -111dB, and the receiver
NF is 130dBm,
but the real noise floor is -100dBm, then nothing below -100dBm will be
detected.
Fairly obvious but not often realised.

My HiFer "beacon"/"remote RF source" consists of a Rio PMP300, a SSB
exciter
and buffer feeding an electronic attenuator that is controlled by a

DTMF from a 2Mtr
HT. The voice samples are 256K MP3 files normalised at 60% with the MCW at 95%.
The unit is located about 1.5 miles from me feeding a modified CB ground plane.
I manualy adjusted the RF output level for the lowest signal that my wife could
understand. This way I could add known amounts of attenuation via my HT DTMF.
It is true that such a close RF signal had no multipath to complicate the issue, but I
think my effort demonstrates why a few dB of additional loss have minimal effect on
HF reception.

It is also worth noting that adding more antenna wire did not effect the detection of
the weakest signal because more wire gave more signal, but also gave an matching
increase in noise. A test loop antenna did allow the output level to be reduced another
~10 dB while keepng the same level of intelligibility. A small active dipole achieved the
same ~10dB improvement. I would love to test a Welbrook loop. At best my simple
loop was a marginal antenna. Such a remote RF surce also allowed me see that
a PCR1000 really benefited from a MW/BCB reject filter.

Let the flames roar.

Terry

I never seriously considered in-radio recharging to be a serious option
because a full recharge takes 12 hours. The otherwise very portable
radio would have to sit in one place for half of a day. I find it much
easier to use 2 sets of NIMH batteries and a wall wart recharger.

I have assumed that the inter braid openings, the lower effeciency of
mylar foil,
and the basic losses of the cable foil account for this. A fellow
enginer insists
it is an effect of self inductance.

Other coax companies charts show very simlar cuirves.

Just what do you mean by misspelling American as Amerikkkan. The
spelling makes me think you might belong to one of those marginal
hate-filled right wing groups that like to huddle deep in the Montana
forest.

848. On-the-Fence a {Low Level} Windom Antenna [Was : Even more on antenna feedlines and matching to an antenna.]

Frank - Thank You for the Detailed Reply and Good Info ~ RHF

So what you have is an On-the-Fence a {Low Level} Windom Antenna :
90 Foot long Windom Antenna Fed-Off-Center at the 35%-to-65%
Point with a 6:1 Matching Transformer and a Buried Coax Cable
Feed-in-Line. Short-Arm = 31.5 Feet and Long-Arm = 58.5 Feet
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6950

Your Ideas and Reasoning on the Matching Transformer
that you used are both insightful and helpful.

Frank - Your Tip - " And for those apartment dwellers,
forget about using the AC outlet ground terminal (green
wire) for a ground. It's usually a source of massive noise! "
- - - Now a days this is very true with all the Man Made Noise
being Generated with-in the Home and Radiating about the
House's Internal Wiring. Using the Round Bottom Middle
Hole on an AC Outlet; or the Little Cover Plate Screw at the
Center of the Outlet; or even the Outlet's Metal Box for a
Ground Connection has very limited success. Maybe 1-in-10
or 1-in-100 can get good positive results by using the AC Outlet
as a Shack Ground. The majority (50% or more) will find that,
as you point out, the Noise Pick-Up from the House's Green
Wire as a Ground Source will render the use of this Ground
Useless for Radio Reception.

FWIW - Burying your Coax Cable with a Feed-in-Line path 90*
to the Wire Antenna Element of the Windom Antenna may provide
you with a so called Artificial Ground for this particular Antenna.

I dislike almost every decission the FCC has made since it's inception.
But in regards to class D CB.....
There wasn't a whole lot of choice.
Class A, ~4645MHz, just wasn't feasable with 1950 technology, and died
on
the vine so to speak. There was a clear need for a simpler licensing
scheme
for small bussiness and farm/ranches. We can "thank" Firestone Tire for

demonstrating an inexpensive 11M transceiver. I suspect that no one in
the
FCC, or Friestone for that mater, could have any idea that CB would
take off.
And until Japen introduced low cost transistor units CB was mostly used
by
busineses.

I am just glad the FCC didn't snag 6M or 2M for CB use.

Too bad they didn't stick in the 72~76MHz hole between TV CH4 and CH5.

I've always wondered how this antenna would have performed if the feedpoint had been in the center as a classic dipole and the xfmr Z-ratio was different than 1:1. Would this allow some semblance of a "multiband" antenna as opposed to the direct feed or 1:1 situation where the antenna essentially is optimum on the primary freq and the 3rd harmonic? Why did I choose the Windom? Because the radio room is directly across from the 35% length point on the antenna. Even though it works well I'm not convinced that there is anything "magic" or unique about the 33 to 35% point on a wire antenna unless there is a true overall impedance averaging effect when fed at this point. About 10 years ago I experimented 9again) with dipoles for HF.
I tried several different ratios in an attempt to improve recpetion.

I tried a dipole cut for 10MHz and then one cut for 18MHz.
I tried 1:1, 2:1, 3:1, and 9:1.

A 70' "long" wire out performed the dipoles on every frequency, with
every
ratio even on the design frequency with a 1:1.

Of the dipoles, the 2:1 transformer with the 5MHz dipole worked best.
I suspect it worked best because of it's greater length.

The transformers seemed to mainly decouple the coax from the antenna.
If I ever get the time I would like to retry these experiments with
triax or
twinax.

I tried a direct connection with several ferritte cores, but after
reading John
Brynt's excellant article on "Is your Feedline acting like an antenna"
I accept
that I did not have anywehre near enough inductance to supress common
mode effects. I had a >LOT< of RFI from household devices.

Terry

I refuse to deal with radiomart because of the private bidders, but appreciate the documentation that he is a crook. I assume the private bidders are to use shills. Ebay is really oriented in favor of the seller, not the buyer, else ebay wouldn't allow such scams. [The reserve auction is a prime example of ebay favoring the seller.]

I wonder if ebay "university" tells jerks to buy stuff on ebay from an honest seller that indicates the warts, then sell it with an ad worthy of a real estate agent lie, a better photograph, and pretend to be a store instead of an individual since a store must know what they are doing.

Very good Terry I don't see any reason for a flames. You post good information and real world experiences. What you posted above is a good example of what people reading the news group need to see in order to make educated decisions about antenna systems.

I just add that the natural noise floor is not flat and Terry's examples above are at some particular SW frequency. If I see a good natural noise figure chart link on the web I'll post it here.

Well, I'll just add more comment. What the information above alludes too and that is as you decrease the bandwidth of your receiver the noise floor should go down. Narrowing the bandwidth decreases the amount of spectrum that goes through the receiver and that lowers the total background noise at the receiver output. You will notice that Terry references the filter bandwidth in his examples.

If it's coming in on the "wrong" sideband it could be an image (455khz IF?) or hetrodyne in the receiver from the "legal" CB band.

What is the official allocation in 27.5-28MHz anymore? For a while there were commercial users but I don't know if they're still around.

Tim.

Hi

I have one and its OK. I also have the DE1107 model.

There is another EBay seller who handles the DE1103 model radio as well and
it comes with a 120V 60Hz input 6V 300 mA output adapter ready for use in
the US.

http://cgi.ebay.ca/DEGEN-DE1103-DIGITAL-AM-FM-SSB-SHORTWAVE-RADIO-NEW_W0QQitemZ5837922991Q
QcategoryZ15051QQssPageNameZWDVWQQrdZ1QQcmdZViewItem

I have corresponded with this seller and he is very conscientious and
helpful, just like Liypn.

Here is a link to a Yahoo group dedicated to this model radio:

http://groups.yahoo.com/group/kaito-de1103/

You may find the posts helpful. Both tquchina and liypn post to this group.

I imagine it's for both reasons. If you can't see whos bidding, you can't tell if your being shilled or not. He did get kicked off for that reason, if you remember.

As others have mentioned, Comb Filtes are often used in video
applications.
This link dose a pretty good job of explaining what they are and why
they are used.

Keeping Joe Kennedy in London minimized the impact Kennedy might have had on the election of 1940.

>Kennedy had to nag Roosevelt to be relieved of duty.

Roosevelt ordered Kennedy to Washington DC after he figured he had the election in the bag. Roosevelt verbally reamed his ambassador and allowed him to "resign".

Franklin Roosevelt was calling for a military buildup before the Nazis
invaded Poland. The US was demilitarized under the rugged individualist
Republican administrations between the World Wars.

Oh, I'm sure the non interventionists were a mixed bag, just like the hippies. Some were marxists, some were Jeffersonian types, some were pacifists, some were facists, some were anti-semites. I expect there were more prohibitionists among the noninterventionists and more free love advocates among the hippies. Given the best known advocates of isolationism, such as Col. Robert McCormack, Father Coughlin, Charles Lindbergh and many Republicans, I picture the bulk of them as conservative.

So what is liberalism, anyway? If trying to establish a communist police state in the US is a defining characteristic of liberalism, there just ain't enough liberals around to bother with.

Both he and Radios4You regularly read this forum and adapt their practices by what they read here, resulting in things like the hidden bidders and feedback. On at least two instances after technical discussions in which I participated, I was contacted by one of them with a request to take on a project for one of their newly acquired radios. I declined both times. I'm sure I wasn't the only one contacted.

One of the things that happens when you post something to a public forum such as this, is it attracts attention from those you'd rather not have looking over your shoulder. Radio-Mart and Radios4You being only two. And when someone, as happens here, telegraphs a distaste for a vendor and suggests, as has happened here, an intent to interfere in a transaction by contacting bidders directly, such comments provoke a response.

Commenting on absurd prices, or questionable products is one thing. Not unlike telling your friends that a different vendor has better pricing, higher quality, or more diversified offerings. We do that every day in recommending Universal, HRO, Grove or any of the other vendors with whom we deal. Stating an intent to follow someone into a store and tell him/her about bad experiences, questionable ethics, or misrepresented products is quite another matter. And the vendor, no matter how shady, shifty and malintended he/she may be has the right and the power to close doors to such direct accusations, especially in their own store. eBay's analog to that is the hidden bidder/private auction.

If someone would really wish to do something effective in having an impact on these guy's business practices, stop telling the world what you're going to do. Once the intent has been stated, preemptive defense is the next step.

If neither of these guys openly state, "I'm going to buy questionable goods, put them up for sale at inflated prices and sell them as New In Box," then don't openly state what you're going to do to impact such questionable practices.

You don't win a chess game by laying out your moves in advance.

The holes in the coax braid are a tiny fraction of the 1/4 wave of the
highest frequency on the chart so I'm doubtful of that.

The coax cable self inductance of the outer braid/shield? Well we
should be able to see an effect of coax diameter size where the larger
diameter should have lower self inductance.

The larger diameter and other wise similar cable has the dip at a
higher frequency. Maybe your buddy is right about the coax outer shield
self inductance.

Many of the coax on the charts are not current but I compared two,
which are 9104 and 9116. Both have the same electrical characteristics
except for the inner and outer DC resistance. 9116 is the larger
diameter cable with lower DC resistance for both conductors. This cable
has its dip on the chart at a higher frequency than the 9104. The 9116
has lower insertion loss (S21) at higher frequencies than the 9104 at
the 6 dB point of about 200 MHz.

If this was a function of Q then it would make sense that the dip would
be at a higher frequency on the larger / lower DC resistance cable but
this is not a function of Q as far as I can see.

I don't know maybe it has something to do with the traveling wave being T.E.M. in the cable but that should be opposite of the chart result. Smaller diameter should be better at higher frequency.

I expect that the 9116 is better at higher frequencies because it is less dispersive at higher frequencies due to the lower ohms per inch of the conductors. You always have two losses in a transmission line, which are the conductor and dielectric loss. One or the other can dominate depending on materials, dimensions and frequency. Here I expect that the 9116 cable dielectric loss is higher than the 9104 but the 9116 conductor loss is lower, which in this case dominates.

The greater dispersion of the 9104 coax at higher frequency may cause the RF energy in the cable to radiate some and not just turn into heat in the cable or your buddy is right about the outer shield inductance per foot?

< Snip >

You can always put radials on / in the ground from the antenna ground
point for a counter poise when you have poor ground conductivity.

In your case part of the antenna is a counter poise so you don't need it
but you could give running one under the length of your "Windom" to see
if it makes things better or worse.

There maybe no perfect transformer but you might as well shoot for the
right impedance target if you are building it.

Most do.

We're talking about things like an occasional prayer, or a bible study,
things that aren't all-out religious service. And to parallel it,
selling newspapers, something that's not an all-out free-speech event
with real speeches. If you can't do the one in public, you shouldn't
be able to do the other in public either. If you should be able to do
one but not the other, then it should be the one mentioned first in

the First Amendment.

The people over there know that the press will print anything that comes
with a few dinars under the table, just as nearly anyone in nearly any
occupation over there will do special work for a little grease.

And you still haven't proven there's anything untrue about the material.

No one person outed those documents. It was several people expressing
doubts and talking them through that started the whole research project.
If there wasn't that element of interactive communication, as was the

case ten years ago before enough people knew about the 'net, the
documents would probably be the linchpin of a massive liberal-media
hate Bush campaign.

There's three, against how many thousand liberal TV news commentators,
how many thousand liberal newspaper writers, how many thousand liberal
magazine writers, and so on?

Let's be honest, the average college graduate can't follow Buckley without
a copy of the Oxford on his lap. He uses the language beautifully, but
that's no good for communicating with Joe Average.

> Ventura, California

I have textbook somewhere that deal with coax issues and I do remember doing
a quick review to see if this issue is addressed. From memory, no real details as
to the "why", just a mention of the effect with increasing frequency.

My friend and I have talked about this several times but never gotten too serious
about it. He is more concerend then me because he is into weak signal VHF/UHF
and the decrease in isolation with increasing frequency is a real bother to him.
While I am a ham who is active on 6M, 2m and 70cm, I must admit that I haven't
been particularly active in weak signal ops.

He is switching to ~1/2" CATV hardline so any improvement will become clear
very rapidly. Currently he has some nasty engress in the 137 NOAA WX Sat
range from a birdie from his laptop. Currently he has the laptop in a rat wire(1/4"
square holes) for RFI contianment. If the engress remains, it is likely the issue is inductance.

I forwarded this thread on to anohter friend who designs CATV systems as I hope
he is much more familiar with the issues.

When pumping near maximum RF through coax I have noticed warm spots but

attributed that more to current nodes then inductance per se. In a satellite uplink
make over I was brought into I found the reason why the replacement waveguide
failed. A 90 degree bend was right at a current node and kept melting the high
temp silver solder, which allowed the preasured air to esacpe tripping an shut
down alram. I chopped off 1", resoldered the joint and all was well. Inspite of 4
years of college, an EE degree and 35 years in the business I am still troubled by
my ignorance on many electronic topics. Too many issues are so esoteric that
good is too hard to dig up.

I do know that "spiral" wraped shielded cable has "odd" charactoristics that I
have attributed to shield inductance.

Wouldn't surprise me in the least. The best thing
to do when bidding is to become knowledgeable
on what you're bidding so that you know what's
really going on.

> One of the things that happens when you post something to a public

In the case of these guys and eBay in general, be
skeptical of anything unusual, such as private auctions.
Sure, there are probably plenty of nice private auctions
out there, but let's face it: if you can't see what's going
on before you bid, then maybe you ought to not bid
on it. After all, stuff comes up all the time.

> Commenting on absurd prices, or questionable products is one
thing.

>
> You don't win a chess game by laying out your moves in advance.

Or better yet, create a budget and stick to it. Don't
get sucked into bidding more than you want to,
and if you can, instead of an online auction go
and look at the thing at a hamfest.

The Truth About Radio-Mart is this: The root cause of this fraud is the simple fact that eBay allows it to happen.

Think of it: A seller sells gottahaveit1995 a radio. Ebay gets paid. Martyn then sells the radio as radio-mart. The same item sells again some three weeks later (usually for MORE money).....guess what: Ebay gets paid again!

What incentive is there for eBay to clean up these types of sellers? Answer: none. Remember Martyn's "Summer Vacation" away from ebay about two years ago....well, eBay did reinstate him after being caught shill bidding....what (again) does that say about the Bay?

Ebay is only as honest as the individual seller is honest. It can be as corrupt as any seller wants it to be, within eBay's broad sellers rules.

We are the real dopes, selling Mr. Martyn all of our stuff and then bidding it up when we know full well that it's trash. Take a look at some the "mint" equipment he sells...you can see the knicks and rust on the cabinets for heavens' sake.

He's been blocked as a buyer of my equipment and shall remain so, no matter how much he's willing to bid.

Too bad that "liberal Democrat" wants to send more troops to Iraq to do the
job right. I guess he just doesn't have the military chops that
Bush/Cheney/Rumsfeld have. You would think he would have deserted the
Republican party after the Carl Roves's dirty tricks in S. Carolina in the
2000 campaign. But the man keeps working away in the Senate, following his
conscience rather than carrying water for the Republican leadership.
Certainly not the kind of man we would want in the White House.

The general consensus was that they'd just finished the War To End All
Wars. No one could have justified much in the way of military spending
under the circumstances.

Whoever it was, the only thing that stands out as certain is that the
anti-war movement was beyond logical thought, i.e. they wanted to avoid
war no matter what the cost.

>> > Many US liberals of the era were admirers of the Soviet Union and ended

Liberalism is a religion. Its god is power, its pope is the President.
They work hard to force the world to live by their religion and no
other, for only their god can control the proletariat. Having a Pope
of the wrong faith is an extreme apostasy, and such a travesty makes
them hate the Pope for pretending to be of the One True Faith and
trying to commune with the Power God.

So a guy gets kicked off of ebay for shilling, and Ebay lets him back?

While we are at it, firefox users should check out ebaynegs. It is a
plug in that only displays only the negative ebay feedback.

Thank you for the heads up on this one.

that "person: appears to have more I.D.'s than an undercover agent for the
CIA. I was about to bid on that as I need a newer frg series radio to go
along with the old frg-7 I now have.

I can already tell that his price on the second auction (2 at the same time
for the same radio) has already gone beyond what the radio is worth in real
dollars. so, I guess its time to hunt down another.

You have just described hundreds of thousands of Ebay deals... Every
sellers dream is to sell their goods for more than they paid.

>
> What incentive is there for eBay to clean up these types of sellers?
> Answer: none. Remember Martyn's "Summer Vacation" away from ebay about two
> years ago....well, eBay did reinstate him after being caught shill
> bidding....what (again) does that say about the Bay?

Ebay reinstates lots of sellers after a probation...so what.

>
> Ebay is only as honest as the individual seller is honest. It can be as
> corrupt as any seller wants it to be, within eBay's broad sellers rules.

Ebay can't police the quality of goods sold...that's up to the buyer
and seller to figure out. Ebay is first and foremost a broker. If
something is illegal, violates property rights, is dangerous or is on a
list of banned goods then they sometimes jump in.

>
> We are the real dopes, selling Mr. Martyn all of our stuff and then bidding
> it up when we know full well that it's trash. Take a look at some the
> "mint" equipment he sells...you can see the knicks and rust on the cabinets
> for heavens' sake.

I'm confused here. You know your stuff is trash and yet you sell it
anyway. And then once you have sold it to Mr. Martyn you then bid it
up???? If he's the crook you say he is then you are sounding more like
a co-conspirator......

Ebay is full of people selling worn out rusty stuff...it's up to the
seller to ask the right questions before sending in his money. Caveat
emptor is the first rule of doing business on Ebay!!

>
> He's been blocked as a buyer of my equipment and shall remain so, no matter

This and previous threads are beginning to sound more like whining from a bunch of disgruntled sellers who can't compete with a high volume dealer.

Yeah the spiral wound foil shield sounds like a bad idea. It is sure to
mess up the fields inside the coax.

Please post to the news group if you or your friends turn anything else
up on this subject of higher frequency noise ingress into the coax.

> Ventura, California

The last time I ventered an opinion on splitters dxAce and others took
exception
to my logic. So I decided to do some actual research. I expected
violent disagrement.

At first glance it does seem that adding 3.2dB of attidional
attenuation in the signal
path would have a clear negative effect on the reception of weak
signals. When I first
noticed this by direct experimentation, I was dubious. But after
several tests with
the weakest signal I could receive I decided it wasn't a fluke. After
getting flamed, I
wondered if I was misreading or misunderstanding what was really
happening. So
I decided that while the math showed the logic was correct, I wanted
real world
data. At about this same time I became convinced that the standard
audio chain
in the typical SW was at best "crap". I had doubted the observations at
Kiwa
about capacitors improving intelligibility of weak signals. I found

that by pulling the
audio straight off the detector diode and feeding it to a clean MSOFET amp,
stations that were un-intelligible "mush" were clearer. I played with better AM
detectors wanting to avoid the hassle of a synchronous detector, but in the end
bowed to reality. I built an outboard synch detector, and with each improvement
I found I could dig out weaker, or at least "mushier", stations. The remote ISM
beacon started out as a SSB unit, but due to some drift after 3 months of operation
I converted it to a very linear AM unit. Nothing fancy, I was given a Rio PMP300 with
a 64Meg memory card. The whole project was based on the remote ISM test set a
Radio Astronomer friend had used. But I wanted real voices signals, not "random"
noise.

After all my experiments I came back around to the observation that in most
cases, the local man made noise floor sets the limit on reception. Better
detectors allow you to understand slightly weaker signals. But the improvement,
while very worth while, is at best maybe 6dB. And that 6dB is really optimistic
under ideal situations. I had a AOR7030+ in my care for a 5 weeks while our
friend arranged shipping to NZ. The AOR7030+ is a much better receiver then
my R2000. And I would give a left whatever to own one. But inspite of the better
selection of IF filters, a quiter RF/IF section and greatly improved detection and
audio chain, there were very few signals that I could understand on the AOR
and not on the R2000 with the added InRad 2.1KHz SSB filter.

It has been an odd autum. We have had 3 power outages since the 1st of Oct
and I have been home to listen through all three of them. The last one lasted from
8:00PM until 5AM. Needless to say I missed work the next day. It never ceases
to amaze me how much the low level AC grunge covers, and how many very weak
signals you can receive when the lights are out.

I really enjoyed the last, long lights out event as I could compare my R2000s to the
AOR. The AOR is a much better receiver, if you have a low enough local noise floor.
Under these conditions the superority of the AOR stood out. It wasn't that I couldn't
dig out most of the signals on the R2000, it was just a LOT harder. I am not
complaining mind you, it was educational to see what a first class receiver can do.
It also helped me decide to take a serious look at selling our place rolling the excess back into TIAA and moving to the sticks.

The main advantage a synchronous detector offers is the reduced ear fatigue.
With a standard diode detector I found that it felt like my head clogged up
after listening to weak, nasty stations. The other advantage is the music we
recover is mush cleaner. My wife plays flute and after listening to some flute
music on a Peruvean station she admited that was the "cleanest SW I have
heard. It sounded like the flutest was in the room with us." She had doubted
the practicality of my summer long experiments. She had enjoyed SW but thought that distant stations had to sound "bad". But since it was the hottest
summer we have had, we weren't going outside that much.s she thought it

made more sense for me to play detector then antenna builder. She uses "my"
gear in the day when I am not at home and I had to give her the 3rd R2000 I
traded for so she can listen to what she wants when I am at home.

The last R2000 has the AD607 synch detector mounted inside with a homebrew
5W mosfet AF amp. It sounds pretty darn sweet.

In Kentucky as recently as 2003 there where several business users.
A glass company in Lexington and another company in Ft Mitchel,
or so,ehwer up that way.

I heard both those stations while working on a better upper SW antenna.

Y'all laugh, but there really is such a thing as a homodyne receiver.

It works by amplifying the received signal so much that all modulation is clipped off, giving just the carrier frequency which is then mixed with the original signal via a product detector to recover the modulation.

"clifto" <clifto@clifto.com> wrote in message
news:pjee63-0dt.ln1@remote.clifto.com...
<a lot of stuff comparing freedom of the press to freedom of religion>

Isn't this argument a bit specious?

The First Amendment says:

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

It's saying that the government can make no law either for or against religion, and no law against freedom of the press, among other things.

But let's take these one at a time.

1a Congress shall make no law respecting an establishment of religion

This clearly means that the government may not choose a religion to support (i.e. a state religion)

1b or prohibiting the free exercise thereof

That the government may not make a law preventing you from practicing any religion you wish in a free and unfettered manner. This part has long been tossed by the wayside for practical purposes which the founding fathers likely never considered at the time, due primarily to the fact that Christianity, in various forms, was about the only religion practiced in the US at the time. I doubt they considered Satan worshipping requiring human sacrifice, or some of the off the wall religions requiring wife swapping, pedophilia or other bizarre or illegal behavior. Add to that the so-called separation of church and state (alluded to to some extent in 1a) having been adjudicated to the point of being ludicrous (a child praying in school has nothing to do with whether the school, a government institution, is recognizing a religion). And for those who gripe about federal recognition of Christmas as a federal holiday.. if nothing else, it's expeditious. Since the government cannot force people to work rather than observe a religious holiday, it makes sense to make it an official federal holiday, allowing the workers time off for it instead of docking their pay.

1c or abridging the freedom of speech

Again, this is not an absolute, nor has it ever been. The thing about free speech is that you must bear the responsibility for that speech. If you yell fire in a crowded theater you will be held responsible for damages and casualties due to your use of free speech in that case. If you advocate

violence, and violence occurs, you will be held responsible for the consequences. If you threaten the life of the president, you will be arrested and likely go to prison. Technically, free speech is not free. This section of the amendment only says that no one can stop you from making a fool of yourself.

1d or of the press

This is much the same as 1c above, with the same caveats.

1e or of the right of the people to peaceably assemble

This one took a beating during the last elections.. where people were forced into pens in certain restricted areas to 'peaceably assemble'.

1f and to petition the government for redress of grievances

Not sure when this one actually went down in flames, but I do know that now you must get the government's permission to sue them, and under some sections of the Patriot Act, you aren't even allowed to know whether you have any grievances at all.

As to the heading of the thread... if the US government wants to plant stories in the Iraqi press, and pay for it.. they should do it the way the rest of us must do, and either buy openly noticed paid space or send it as an editorial, and it should be printed or broadcast as such. I.e. like a paid infomercial. Otherwise, whether truth or lie, it is a manipulation. And doing what has been done in a covert fashion only makes it look like everything MUST be a lie, to those to whom such news is disseminated.

Hi Philip:

Interesting to look at, but unless you go somewhere else for them, there doesn't seem to be actual freq's listed for the programs.

What am I missing ?

Bob

ILG hasn't yet released their semi-annual database of shortwave broadcasts yet, but they DO have a new online service that lets you look up the schedules of various broadcasters by time slots etc. See it here.

A 110 volt to 220 volt wall wort costs about $35. You can get a 110
volt to 6 volt for about $12. Forget the current adapter you have.
Buy the right ONE to go directly from 110 to the unit.

Which is what I do most of the time. It's a lot more convenient.

I failed to mention in the previous post -- BE SURE TO GET THE CORRECT
POLARITY on the tip of any adapter you purchase.

The charge time depends of the mah rating of the batteries. If you get
some higher rating batteries, i.e. 2600 mah, it may take 17 hours or so
to charge.

I have a ARA MLA-2/B loop antenna that is 50 years old and looks like
it could
survive a near miss by an A-bomb.

It is "an impedence tranformer from a 50 ohm transmisio line to the
nominal 377
ohm radiation resistance of free space".

It is also the ugliest antenna I have ever seen.

I haven't had much luck with it but I hope to get it going in the next
few weeks.

Radio Astronomy types love these things.

Dear Cuhulin,

AES < http://www.aesham.com/ > sells the AN-LP1 and they have it in stock more reliably than most other dealers. (You'll have to telephone them toll-free as they are forbidden by Sony to sell the antenna on the web.) It will make a great difference in reception quality with the ICF-7600GR.

Do NOT - repeat NOT - buy Sony's AC Adapter. It does not have a transformer but is, rather, a switching-type adapter and, according to PASSPORT, is marked "Not to be Used with Radios"!

If you buy two sets of rechargeable batteries and a charger in which you can leave the batteries untill needed (one that automatically switches over to a trickle-charge) you will not need an AC Adapter at all. If you MUST have one, buy the one sold by Universal Radio < http://www.universal-radio.com/ > (just check under the Sony ICF-SW7600GR listing). Frankly, ANY AC Adapter can introduce noise into a radio (unless very well designed) and, since this radio is so efficient on batteries, why not just use them? They're all I use with mine!

Congratulations on your purchase and I hope you are as pleased with the radio as I am.

Best,

Joe

98 percent of Westin Hotel users are non-smokers and always ask for smoke free rooms. They dont have enough sometimes to go around .

Smokers are becoming an endangered species in the US. All big towns here in Ky and a lot of other states are going smoke free as far as bars/restaurants and any other public places. It hasnt hurt the bars any and its strictly enforced! The only thing the smokers can do is go to a cheaper low class hotel or motel. Tough!

I smoked for 27 years....quit 14 years ago cold turkey!

As I've mentioned before, sideband is a problem on this radio IF you expect to park it on a frequency and wait for the signals to appear. This is because the step size isn't fine enough (at least on the older model that uses the clarifier) to be on target. If you tune to a frequency and hear some audio, then you can use the clarifier to tune it in. The clarifier is like an analog tuning dial that is used in addition to the digital dial. An example where you might want to dial in a radio and wait for traffic is mil air, specifically the GHFCS (or whatever Rummy renamed it).

Other than sideband, I've used mine quite a bit while travelling and as a portable radio. [It's beat up to the point where the hotel maid probably wouldn't swipe it.] I often use it in hotel rooms while on the road, mostly for AM broadcast, since whatever the hotel supplies for a radio is junk.

The sync will growl and needs a reasonably strong signal to lock. Again, this is on the older model, not the GR. Given the price, the performance is great.

> goals

True...

There weren't enough troops originally because von Rumpot and company wanted to do the war on the cheap. There aren't enough troops *now* because there is a *bottomless* supply of "insurgents".

Figure it out... 25,000 to 200,000 dead innocent civilians, depending on which number you want to believe, but that seems to be a reasonable range generally agreed upon by most.

Now, go to the next step. Your innocent [wife] [daughter] [son] (pick one or more) was killed by the Americans. Are you going to line up behind the shrub and throw flowers at the liberators or are you going to be an "insurgent"??? Sorry folks...we're not liberators, we're occupiers who build up a lot of hatred for each innocent civilian we kill...and thus create the bottomless supply of "insurgents".

Before you disagree with the above, what would *you* do if Iraq invaded us and ended up killing your kids and you fought back against the invaders? Would you consider *yourself* as an "insurgent" or a patriot? As it says in the Bible the shrub loves to quote, "Walk a mile in the other man's shoes".

Iraq---the wrong war in the wrong place for the wrong reason.

I have purchased items on Ebay with very good results. I have also bought from RRS members with the same good results. Whle I'm sure I will sell something on Ebay someday, I prefer to sell a something I bought to someone else who will enjoy it as much as I did, or who needs a part I don't.

BTW, the flat black metal R8A knob I bought from Mike Maghakian is outstanding!.

Thomas Burnside lives one mile West of me.He buys radios and things from estates and resells the items.He subscribes to and advertises in American Radio Classified monthly news.I was over there visiting with him and his wife last Saturday on my way back home from the tobacco store.There is a big metal building across the street from him,it used to be a store that sold CB radios or whatever,nowdays it is a company that sells big industrial hoses.There is a nice looking metal tower that I estimate is about thirty five or forty feet tall behind the store and some kind of a V shaped antenna mounted on top of the tower,it doesn't look like the tower is being used nowdays.Apparently,when they moved out of the building,they decided to leave the tower and antenna there.I suppose somebody could buy that antenna with the tower at a pretty good price.I might check on that one of these days,it never hurts to ask.

It's not exactly an empty hole. 75 MHz is used extensively for air navigation beacons.

On those occasions when I have been bored enough to listen between 26 and 28 MHz I have found most of the SSB activity, other than the 40 official channels, to be on LSB.

Every time it's tried it just seems to fail - at times it seems to increase the background noise. Actually I'm surprised that there aren't a dozen responses calling you a 'net nanny' or being otherwise derogatory toward you for your suggestion. About the only things to do are 1) not feed the trolls 2) generate on topic posts 3) use filters if your newsreader has them and 4) hope that the first 3 suggestions make participation in rec.radio.anythingbutshortwave (as it seems at times) more pleasant.

1005. Denton County, Texas (The Colony)

Anyone here from this area? Thinking of moving there and was wondering what there is to hear. Any military bases? Local police trunked/digital?
I imagine h.f. listening would be different than my present location (San Jose, Ca.). I spent a little amount of time Googling the area but it appears to be a very small town...

1006. Radio Shack DX-394 portatop now available for sale !

Message-ID: <ncCdnfAWTo1vuAjenZ2dnUVZ_sKdnZ2d@comcast.com>
Source record: 53116

I recently posted an article on how I created a super cool DX-394. not wanting to stop there, I built another one but with a drastic difference, on this new unit, I put in a speaker so big I had to do some surgery to make it fit ! I also put the filter switch on the front this time,
so that means I can sell the original, which I really think very highly of.
you can see more about it at http://home.comcast.net/~maghakian

this one is for sale for $295. the one in the article is the one you get.
you will also get an 8 AA battery pack (you supply the batteries) and a wall AC adapter.
I am sure you would be well pleased with this unit for SW DX and SW listening.
email me at mmaghakian@yahoo.com if you are interested.

>

When I was working downstate, WLS renovated their transmitter/tower facility and blew into town like the tower was in the back yard. Less than a year later I was working in Milwaukee and the signal would fade early, noisy by Waukegan, difficult by Racine and by Milwaukee it was virtually gone. This isn't a new condition. As much as 20 years earlier, WLS wasn't well received in the north suburbs. In fact, it was tough to receive in River Forest at my grandfather's house.

Today, WLS is tough to receive at my place near the Wisconsin line. So, the problem isn't related to any hardware failure, or deficiency, but more likely terrain, ground conductivity, and very high noise sources between Tinley Park and the north burbs.

The last time I looked, the official allocation was aviation. There
may be secondary users though...Saying that, I've never heard
an aircraft using that band. Actually...I don't believe I've ever heard
anyone using that band except CBers, but I never really listened
too awful hard. Biz users are probably fairly recent I bet.. I've
heard quite a few of those on the low VHF band when it's opened
up.

Source record: 53130

I've been dealing with idiot truckers
bootlegging on 10m since the 80's. Many bootleg in the cw section of
the band and stand out quite noticeably.

Oh I've heard em. I used to crank up my henry console
when they started that mess with me. A KW+ on 10m will
brown the food. I'd make their bootlegging as painful as
possible for them. All they would hear is "WHUMP_WHUMP_WHUMP"
if on AM. On SSB, of course they would hear the tone, but it
would still be difficult for them to carry on. I'm such a radio bully.
:/
I guess they did kinda start out in the late 80's now that I think
about it. Time flies so fast, that almost seems like yesterday
sometimes... I used to work lots of CW on 10m, and I had little mercy
for any CBers that thought they should share the freq with me.
I could hurt them lots worse than they hurt me, being I was
receiving CW with tighter filters.. I never used the amp for normal
use on 10m...Overkill...But I'd fire it up for them just to give them a
good toasting. I'd almost always be able to run em off the freq.

I am about 10 miles south of The Colony. I listen to the Carrollton
police and fire stuff on the Pro95. The Colony is a smaller town than
where I am. DFW very close and can monitor them. I believe there is some
type of AirForce,Navy stuff in the FT Worth area, about 50miles from
where you are talking about.

>I assume from the tone of your post that you had a negative experience with
>a Drake shortwave receiver?

I've never used any of the modern drake stuff, but I
have a lot of the old. IE: 2C receiver, 2CQ speaker/multiplier,
R4 receiver, T4XB transmitter, etc, etc. They are very good
radios overall. In the 60's when they came out, they were
probably 2nd to only collins. And some, but not all,
actually preferred the drake 4 line over the collins S line.
The collins is probably slightly better, but it ain't by a
whole lot. Both use the same basic type of low freq osc
circuit, which began with collins in the 50's. The advantage
to that type of circuit was, no matter where in the spectrum
you were tuned, you had the same amount of readout error
and resolution, and the same amount of drift.
Most of the other lesser brands used circuits where the
upper bands were less stable than the lower bands.
Also the readout resolution would change as you tuned
farther up. The resolution would get smaller and smaller.
Notice all the cheap, or old SW radios that use analog
tuning..They do this. Drake was started by an ex-collins
employee, I believe. This is probably why they used such
similar circuits and the copper plated chassis, etc.
I can't talk about the R8, as I've never used one. But the
older drakes were very good radios. And still quite usable
to this day. My R4 is one of the first built in 1965. It's serial #
0058. Still works great. The 2C and 2CQ is a good radio.
It was their "novice" receiver, and they sold a matching 2-NT
novice transmitter. But all the old drakes can go general
coverage if you have all the needed xtals. Same as the collins..
I think I had about 79% of the HF spectrum xtaled up on my R4.
I remember back in the 70's when you still saw a lot of old drifty
crap like hallicrafters, heath, national, etc, etc, the drakes
were like cadillacs in comparison. We knew it then. They
were good radios. Like I say, I consider only collins as being
better. We never could afford collins back then..."jr hi" We could
barely afford a drake 2C...They weren't cheap, even in the 60's..
In the late 60's even the low end 2C was listed for $255.00.
The R4 was about $500 or so.. Not cheap in the 60's...

Count me in for "actually preferring the Drake", at least my "4B line"
as opposed to the Collins "S-line".

> The collins is probably slightly better, but it ain't by a
> whole lot.

Well, it clearly depends on your definition of "better". Possibly the
Collins mechanical filters gave better ultimate selectivity performance,
but they sure fell apart in QRN conditions.

To me, the beauty of the Drake was its flexibility--you could add bands
by just adding crystals, it had provision for crystal controlled
transmit for your favorite net frequency or auto-start RTTY net, you
could easily FSK the transmitter for RTTY and the receivers had
provision for placing a spare audio output jack to feed your RTTY
demodulator. Also, the Drakes were great for CW, while the Collins was
noted mainly as an SSB rig.

I presume you're talking about the R2000 with the InRad
and the Sync you made working in AM? Or are you
working in ECSS?

We had a couple of power outages, but since they were coupled with T-storms, there wasn't much listening I could do (safely).

I was going to ask if you're planning on playing with small loops so that you could lower the manmade noise floor, but I suspect based on what you wrote farther down that that is next summer's project.

> I really enjoyed the last, long lights out event as I

You don't have to fiddle with it at all to make it work well? I thought that was the knock against using something like a Sherwood: you had to fiddle with

it a bit, and if you wanted seemless operation that was a pain in the neck.

You ought to offer mods for the R75 to make a more effective synch there.

Sure, that's a given. If you've read through the messages on this guy, you'll see that the function of this sort of thread is to alert folks to the fact that this guy is presumably an habitual liar regarding the quality/condition of the products he sells. While other sellers might do the same thing, there has been an established pattern noted by some with regard to this specific seller. By alerting the rest of us to this, the thread is serving to potentially improve knowledge on the buyers' side. Other threads have highlighted instances of alleged shill bidding on this guys part, even noting, for instance, that one of his profiles had once left feedback on the other.
>
>
> Ebay can't police the quality of goods sold...that's up to the buyer

> something is illegal, violates property rights, is dangerous or is on a
> list of banned goods then they sometimes jump in.
>
It's quite true that eBay can't police the quality of goods sold on their site, that's why a thread like this serves to alleviate problems of imperfect knowledge on the buyers' side. Since this guy allegedly has an established way of doing business (i.e. buying mediocre goods and then selling them as "as new" or "excellent condition"), Mike is actually doing us a service by alerting us to the seller's practices.
> >
>
> Ebay is full of people selling worn out rusty stuff...it's up to the
> seller to ask the right questions before sending in his money. Caveat
> emptor is the first rule of doing business on Ebay!!
>
Exactly, that's why it's useful to have threads like this in order to alert potential buyers (at least those shortwave enthusiasts who frequent this board regularly or occasionally) when a seller is habitually overstating the quality of merchandise and/or possibly manipulating the bidding (by utilizing private bidding and then employing an alternate account to possibly drive up the price at which an item sells).
>
>
> This and previous threads are beginning to sound more like whining from
> a bunch of disgruntled sellers who can't compete with a high volume

> dealer.
>
I don't see that folks are whining about not being able to compete with this guy. It's more a case of folks noting his practices and warning others that they might think twice or thrice before bidding on one of his items. And that's fair enough, huh?

Ebay could drop the private feedback and private bidders feature if
they gave a shit about the buyers. Ebay could provide a feature to only
look at negative feedback (i.e. firefox ebaynegs) if they were
concerned about the buyer.

There is an opening for some other company (google perhaps) to give
ebay some real competition by become a fairer market place. Remember
when ebay dropped the reserve auction feature (a real time waster for
buys and their system) but reinstated it when the sellers complained?

I've been on this forum long anough to recognize that small core of
individuals who when this topic comes up all pile on with the same
litany of complaints and responses over and over. If this guy was
really that bad his rating would be so low that Ebay would drop him.

There are so many sellers of radios on Ebay that throw descriptives
like Mint, Minty, New Old Stock, Clean, Works Perfectly, etc., into
auctions that anyone with half an ounce of sense just completely
ignores them and asks specifics about condition. Information on Ebay
has to be treated as though it is coming from a used car dealer.

> an item sells).

I have yet to come across a seller that underdescribes his radios, and
in my experience there are very few that list the warts and wrinkles
completely. As with used car dealers, Ebay sellers are in the business
of selling.

Do you or others have recent examples of this guy using shill bidders
to inflate the auction price?

Even if the guy is using shills that is no excuse for a potential buyer
not knowing his maximum price.

Given that it is essentially the same group of people climbing on the
bandwagon each time I have to think there is another agenda.

Huh. I thought Kennedy first offered to resign in October. He did come to the US in October, but he says his first attempt at resignation was November. I checked my copy of "A Man Called Intrepid" and it confirms my memory that the Brits were relaying their spying on Kennedy to Roosevelt. Roosevelt was not only hearing about his chief appeaser, but also Kennedy's big political talk such as his statement that he could swing the entire Irish Catholic vote to Wilkie. However, I never really trust these spy books. Still, it seems credible, given the rest of Kennedy's activities.

I don't remember where I heard that one of the benefits of letting Joe Kennedy take the ambassadorship to England is that it would give Roosevelt a clear field in Democratic politics. Again, it seems credible, but I can't back it up.

> "Germany's best friend" in London."

Yep. I wouldn't be suprised if Kennedy was doing business with the Nazis, but I'd be curious to know if he was making more money in importing scotch and gin from England.

It is curious that Kennedy is quoted in a letter to Charles Lindberg bemoaning Kennedy's fear that bad PR events such as Kristalnacht might derail the efforts to save western civilization. It's unclear from the letter whether Kennedy had a closer connection to the Nazis than Charles Lindberg. Had Kennedy had a closer connection, I'm sure he'd have advised the Nazis to be more diplomatic.

>
> The general consensus was that they'd just finished the War To End All

Yeah, there really wasn't much debating it in the post WW1 world.

>
> Whoever it was, the only thing that stands out as certain is that the
> anti-war movement was beyond logical thought, i.e. they wanted to avoid
> war no matter what the cost.

The Nazi sympathizers would have had no logical reason to go to war with the Nazis. The Fortress America types would have tried to substitue a cold war for a hot war. Appeasment is a logical solution in a hopeless situation. However, the appeasers underestimated their countrymen and overestimated their enemy.

Try the allocations chart in part 2, and read all the footnotes given
in the chart. Try 2.106, but it'll take a bit of time to download.

I always have been mechanically minded.I Enjoy watching programs on tv about building things such Cars and Motorbikes and Aircraft and Ships and Homes and all kinds of things.There are many,many other mechanically minded people all over the World who like that stuff too,or else those kinds of tv (tv Radio) programs wouldn't be so popular.

Yes it is the R2000 I got from Frank Cathell.
I can do ECSS but so far synch has worked fine.
I have the circuit boards for ISB which should allow some
neat tricks but it will be next summer before I dive into that
project. With ISB it is possible to reject "everything"
but the signal yuou are after.

Yea, I kind of figured that out. Most guys have to fight to get a
SW into the house, me I have to fight to keep my wife from
taking it from me. Somehow I feel so put upon.

> You don't have to fiddle with it at all to make it work
> well? I thought that was the knock against using

Once I got the levels correct form the buffer stage it worked
great.

I am using a cross between Pete's and this version:
<http://home.worldnet.att.net/~wa1sov/technical/sync_det.html>

There are some very good working designs in the yaho syncdetector
group.

>
> You ought to offer mods for the R75 to make a

I think it got bad when a bunch of 10 meter synthesized rigs were made
when Novice/Techs got voice privileges on 10 meters. As I remember,
they were reported to be retuneable down to 26-28 with a few jumpers.
Sold at truck stops and the like, as they ran more power than a legal
CB.

Copied this directly from the first post: ...and this is not the first
time
he bought something from me under gottahaveit1995 and sold it two weeks

later as radio-mart
the auctions in question are: 5837723543 and 5833316809
judge for yourself how honest this person is and if you can ever
believe
anything he says in his auctions.

Your map didnt come up, but I assume it was by an airport which launching
model rockets is prohibited. That never seems to stop some people though. I
once launched a very small rocket (the Streak) with a VERY large engine.
Never saw it again, outta sight man.

HOLIDAY GREETINGS FROM K1MAN

And Jesus said:

"...The sower went forth to sow....." Many seeds did not take root. "...and other(s) (seeds) fell upon the good ground and yielded fruit.."

So we, as Radio Amateurs, sow our seeds of national and international good will and friendship. There is a lot of good ground out there and much rocky soil as well.

Best wishes to all, both friends and enemies, during this 2005 holiday season.

73 and GL de K1MAN

1071. Lightning Induced Voltage Transients Into An Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-12-06 20:09:24 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <It6dnXqe_-BycgjeRVn-uw@comcast.com>
Source record: 53227

Hello:

We get a lot of lightning strikes around here, and was wondering about this:

Presently have a receive-only random length wire running around the inside
of my attic.

Guess I'm not really too worried about "direct" lightning strikes; if there
is one I imagine I have a lot more to worry about than the radio.

But, does the roof provide any protection from nearby lightning strikes
inducing a high transient voltage
into the indoor attic antenna wire, as compared to if I had the wire antenna
strung outside the house ?
Again, from an induced voltage standpoint concern.

Or, is the fact that it is indoors really meaningless ?

Thanks,
Bob

I was wonder why you folks are interested in
short wave or what you like listening to.

I'm not much into broadcasts... except maybe
Radio Havanna. They're funny.

I'm more into odd signals and digital modes.
Radars, ship to shore, maritime fsk/sitor, anything
coded.

The roof provides zero protection against inducted current unless the
roof is made of metal, in which case it still wouldn't be safe.

If there's an electrical storm disconnect every wire that comes into
your house (except the electric mains).

I've just gotten back to regular listening. I was languishing a bit during a down-time for my antenna (literally---it blew out of the tree). But I'm back now with about 75 feet of random wire. Listening in Southern California with an R75 and a Drake SW4A.

I've always been a fan of interval signals and national anthems, especially Radio Netherlands, first national anthem I heard forty years ago when I started listening. I also like time signal stations.

K1MAN ESSAY - ES051202 -

Blood is Thicker Than Water

America is all of us. If you come from another country and/or another culture, you are welcome by me as we offer you citizenship and the protections of our precious Constitution. Those of us who were born here, however, are willing, by definition, to die in the protection of our precious birth land and our precious Constitution.

Even though America is all of us, and it is, we will not allow you to do some quite important things such as being our President if you were not born here. There is a damn good reason for this. If push comes to shove, we are afraid you might "cut and run." I say "might." We simply don't want to take this chance, however slight it may be.

In that sense, therefore, those who are not born in America are "second class" Americans.

Same deal in Maine. If you were not born in Maine, you are not a Mainer. I "deal" with that. Mainers do cut me SOME slack, however, since I have been a citizen of Maine for 48 years. SOME slack, not very much. That is just how it is, blood is thicker than water.

America is predominantly Christian, and we do, indeed, have a national Christmas tree. That is just how it is, blood is thicker than water. In this case, we are remembering the holy birth of Jesus and the blood many of us believe he shed for all of us. That is just how it is, blood is thicker than water.

English is the predominant language in America. Some day there well might be more Spanish speaking Americans born here than English speaking Americans born here. There might well be more "African Americans" born here that "whites" born here. Hey man, this is America; I just love being American!

When the first human, an American, set foot on the moon, a Russian said to an American:

"It must be great to be an American tonight!"

No, "Ivan:"

"It is great to be an American EVERY night!"

That is just how it is, blood is thicker than water.

If America is threatened or if our Constitution is threatened, you had better watch out! I will STAND UP and fight, and if I need help, I will choose a "kid" born in America, educated in America, who played sports in America, and who was trained by the U.S Marines, U.S Army, U.S. Navy, U.S Air Force, the U.S. Military Academy, our Air Force Academy, Annapolis, etc., etc., over someone else who might just "cut and run" when push comes to shove, as happened in WWII and countless other situations that have cropped up over our brief 200 year history.

If your native country got "raped" during WWII, YOU are the ones who that let it happen, and those kids mentioned above are the ones who came over to "bail out" your collective asses. The "goose step" did not frighten those kids very much. Americans don't know the total humiliation of being "raped." We have NO FEAR of someone coming in the middle of the night to take one of us away. Our Constitution specifically allows us to have guns for just such an occasion if such ever occurred, however unlikely. Many Americans have more "fire power" than the so called "professionals." That is just how it is, blood is thicker than water. Be careful! Don't count America out yet! That is just how it is, blood is thicker than water.

May God bless you and your family during this holy season.

73 and GL de K1MAN

Sorry, forgot to mention a couple of other nifty Drake features--the
great pass band tuning that let you do rtty and shift interference out
of the pass band for CW and SSB, and the inclusion of 160 meters. Also,
even though it was not an inexpensive radio, it was waaay more
inexpensive than Collins.

Nearby lightning can induce large voltages on an antenna and your single wire antenna is a good candidate. You don't even need a nearby strike to possibly degrade the front end of your radio. Either disconnect the wire from the radio anytime lightning is in the area or get a voltage clamp on the lead-in.

Since 1962 I have always had a "long" wire antenna of one sort or the
other up.
And in that time I think I have never had a direct strike. I did have a
nearby bolt
take a nearby tree down. Reduced it to pencil sized splinters. That one
damaged
the coax lead in.

I used to enjoy paling a neon buld (NE-2) from my antenna to ground.
This was
before I knew about matching transformers. I gave that practice up
during the
aprroach of a nasty T-storm that was about 20 miles away. My little NE2
was
flashing to beat the band. Then >BANG<!. the bulb was gone. I was lucky
in
that I had the bulb inside of a pyrex florintine flask. It cracked the
flask. My
parents came storming upstairs, they thought I had set a firecracker
off or
dischaged a firearm. This followed an event that happened about 2AM.

Dry snow induced enough electricy into my antenna that the "lightning protector", spark gap, was sanping loud enough to awaken my parents. I slept through it,,,, heck I have slept throu a 3 alarm fire 2 doors down.
Dad insisted that I ground the the antenna lead in. We installed a classic
horrow movie knife switch the next evening.

So yes, lightning can and will induce enough energy to be damaging. It is possible to have enough protecton equipment to minise the risk. But it isn;t easy or cheap. The best solution for most of us is to disconnect
the antenna and short it to ground when not in use.

cuhulin@webtv.net posted a link to a very good web page that shows, as RHF said, "getting the job done right"

<www.knology.net/~res0958z>

Like I said, it ins't easy or cheap.

I wish my system was even half as good as his!

Terry

Yeah, there was that 'fair' election in 1960 when the Dummycrats in Chicago stuffed the ballot box with dead folk votes!

Radios4you certainly does not fall into the same class as Radio Mart by
any stretch of the imagination. R4U runs a legitmate business with
Chinese imports and does not buy off of Ebay and resell at inflated
prices. I think this comparison of including R4U with Radio Fart is
unfair!

"Here in Ky"??
Where in KY.

Lexington went smoke free 2?years ago.

Loiusville just wnet "smoke" free.
Though there are so many exceptions it will take the courts to settle
this mess.

How is SW reception in your part of the commonwealth?

You can say that again.

Since I built an outboard synch detector with the AD607 I have been
amazed
each and every time I receive a signal with fading. The difference
between
a synch detector and a standard diode detector is HUGE. Even the simple

improved AM
detectorat:
will offer significant improvements over most stock detectors.

The addition of an AD607 to my R2000s and my R390 has given me what
amounts
to new radios.

I have listened to SW since 1962 and I still can't get use to lack of
"flanging"
distortion on DX stations.
I almost miss it.
Almost.

I would love to have the Kiwa MAP and the Sherwood SE-3 outboard
detectors

to compare to my simple efforts.

Two comments:

1) People seem to get upset that he "bought it off eBay and re-sold it on eBay".

So what??? What if he bought it at a flea market or garage sale and then sold it on eBay? I don't think you would know or care. Ergo, it makes no difference *where* it came from.

2) You said "resell at inflated prices". Hey, folks...this is an *auction*. Please show me where he is putting a gun against someone's head and forcing them to bid.

P.S.

This is not to defend shilling (if any) or lying about the condition. These are entirely different issues.

1129. Degen 1105 for trade

Newsgroup: rec.radio.shortwave
Date: 2005-12-07 03:07:42 UTC
From: dk <dakilen@gmail.com>
Message-ID: <1133924862.209243.9880@g49g2000cwa.googlegroups.com>
Source record: 53187

Hello Everyone! (sorry for the duplicate post if you subcribe to
multiple groups)

I've got a new (about 8 hours use) Degen 1105 that I would like to
offer up for trade. You can see where I bought it from by clicking
here
http://cgi.ebay.com/NIB-DE1105-FM-MW-SW-DUAL-CONVERSION-RADIO-DEGEN_W0QQitemZ5836963273QQc
ategoryZ15051QQcmdZViewItem
You can also read a review of the radio here
http://www.radiointel.com/review-degende1105.htm The only change that
I made to the radio was to superglue a belt clip on the back (off of a
Icom IC-R5).

I bought this because I've got a good sized appetite for new radios,
but it doesn't seem to have the volume projection in loud environments
that my Icom IC-R5 has.

Anyone out there have a radio that's not in use that they would like
to offer up for trade?

Douglas Kilen
Superior WI USA

Of course many people resell radios that they buy on eBay. The issue is lying, period. Radio-mart lies about where he gets the radios he sells, as well as the condition. He also claims that he has aligned it, replaced tubes, etc. when in fact he does not. The people that sold him the radio know the truth, which is what started this thread. Most of the time he doesn't even change the text of his listing. He's just generally a shady character, and it's forums such as this that expose him.

I only listen to power line noise.

nyuk nyuk

But seriously folks, I like LW beacons when I get tired of broadcast
listening.

Apparently,I never believe fed govts "official stories"

Aeronautical Engineer - official 911 Pentagon Story is Bogus. middle isle at www.rense.com

I am not an Aeronautical Engineer and I do not believe a Boeing 757 Airplane can fly twenty feet off the ground,not for any considerable distance anyway.Go ask some Pilots whom have flown Boeing 757 Airplanes if y'all want to.

Some of y'all have been to New York City (I haven't ever been to New England before,nice place to visit perhaps,but I wouldn't want to live there,they can have it!) before and walked right by or stood on the sidewalks of where the World Trade Center buildings used to be and looked wayyyyyy up at the top of those buildings.Do you really believe those two Airplanes are the cause of those two buildings falling down? it certainly wasen't the fires.IMPOSSIBLE! Only an Earthquake or explosives could have caused those two buildings to fall down.

Twenty feet off the ground? They hit the tower several hundred feet off the ground. Those are TALL buildings..and by the way, every structural engineer I know thinks the fire should have brought the buildings down. It weakens the steel significantly.

Actually, Frank, he does. Further, he sells items as new that are
not, and has been equally as 'generous' in his descriptions. And like
Radio-Mart, he buys with one account, selling with another, and in a
couple of cases, listed an item for sale with full description before
he's received it.

More than one person in this group has experienced this through first
hand transactions. I've seen him do it, myself, through careful tracking
of his auctions when alerted by someone who was involved in a
transaction first hand.

One member here has had extensive experience with Radios4You he can
go into dramatic detail. With little difference between R4U and Radio-Mart.

Probably. But then any type of fire was capable of destroying the towers
like that, not just a plane crashing into it type fire. Sure looks like
someone paid off the city to look the other way during construction.

Greetings! I guess I have just not noticed this before, but as I was casually scanning through the 31 meter band I found Radio China International on 9.570 with one program in English, and a different program in English on 9.580. The time was 1hour GMT. I imagine they were broadcast from different locations, but the target area seemed to be the same. I live in South Carolina and both had great signals coming in here. Is this a common practice for them and or other stations? Just thought I would ask. Have a great week! Jon in South Carolina.

Years ago when I started SWLing, I goot into the QSL card kick, mostly broadcasting stations. I'veexpanded my interests into utility listening and am presently spending alot of time logging HFFAX stations, I'v logged quite a ew countries andprinted the charts after decoding the. The thing I enjoy about utilities is that they use much lower power and alot of times everything has to be just rihght" to actually get decent copy.

Yes, I remember Radio Netherlands actually having
pretty entertaining programming.
If you know a good frequency for them now let
me know.

I'm in San Diego. Got a Kenwood TS-440 and
a 40m, 20m, 10m dipole up not real high.

Well, George, good thing you're a Brit, not American. The American way is to support freedom of speech. It's one of the cornerstones of our nation. You ("plus others") can't seem to tolerate views that differ from yours and therefore must resort to ridicule and name calling-certainly *not* the "American way".

LOL at the "anonymous" and intolerant coward...

When your views are 'tard boy views then we have the freedom of speech to indicate them as such.

Perhaps you'd best run along and study up a bit more?

(CRI) 9570 is via Albania to Eastern NA. 9580 is via Cuba to Eastern and Western NA.

By the way, RCI would be Radio Canada International and CRI wold be China Radio International.

The engineers never considered the paper that
would be used inside the towers when they went
and tried to figure out the combustible mix.

It's not the first nor the last time that things
like that will be overlooked in designs.

Mike Maghakian would be able to say more definitively than I
precisely which name belongs to whom.

One former member of the group, a former staffer at VOA who was run
off by huge volume of petty bickering a few years ago, entered into a

couple of transactions with R4U with less than optimal results. He wouldn't have done business with R4U a second time, except he got sandbagged by one of R4U's alternate purchase ID's.

CIA 'emptied secret jails' before Rice Europe trip

The Telegraph

December 7, 2005

The CIA last month emptied two secret prisons in Eastern Europe of terrorist suspects in a frantic effort to defuse the "rendition" controversy ahead of Condoleezza Rice's visit to Europe, sources in the agency have claimed.

I don't make a habit of listening to them. A little time spent listening
to them goes a long way if you catch my drift. I come across them
occasionally scanning the bands.

Israel has just repudiated it's neocon fan club and told the United States it fears the outcome of regime change in Syria.

U.S. officials told their Israeli counterparts that toppling Assad could be "transformative" and dismissed concerns about an Islamist regime taking his place.

But the Israeli's tell them they are full of shit.

At any rate, folks like FDR like to gloss over the REAL reason the towers collapsed: It was because of the actions of the folks that the Liberal/Democrats seem to be supporting instead of supporting the USA.

These days, the Liberal/Democrats are just as big, or bigger a threat to the USA as al-Qaida.

My right ear is about halfway hard of hearing.A few months ago I bought a box that has some of that liquid ear wax remover stuff and a little rubber syringe thingy in the box,DEBROX is the name on the box.I followed the directions exactly,but it didn't seem to do much good.That married Irish woman wayyyyy over yonder across the big pond (she is about fifty years old) was having some hearing problems.She said she went to a clinic and the ear doctor syringed her ear and that cleared it up.Maybe some day I will drive over to the VA Horsepital here in Jackson and let them see what they can do about it.My old grandpappy used to say to let somebody pee in your ear if you have a hearing problem.

There was a ten or twelve story tall steel frame building in Madrid,Spain.That building caught fire and burned for about two or three days and it was still standing after the fires went out.Last week,I read about an abandoned tall grain storage building in down town Sioux Falls,South Dakota.A company that brings old buildings down by planting explosives in the old buildings they want torn down fixed up the old building with explosives.All the building did when they set off the explosives was to tilt over at an angle into the basement of the building.Those people in Sioux Falls had bought some raffle tickets and they were cheering when the building didn't come down as planned.Yeah,and that third WTC building,WTC7 came falling down too when that Silverstein guy said Pull It! y'all dont think there is something awfully fishy about that?

I listen to them on 6165 after 0100 UTC, which seems to be the best
frequency for them at the moment. Programming is still good; they alternate
Dutch, English and Spanish. I like the Dutch reports too since I'm trying
to learn a bit of it (starting with the weather reports at about 50 minutes
after the hour).

Dear Steve,

In my opinion, your Grundig Satellit 800 is a better receiver overall than either the Palstar 30CC (with which I have no experience) or the ICOM IC-R75 (with which I have limited experience). I am basing my opinion about the Palstar from reviews I have read (primarily PASSPORT's) and my opinion about the ICOM comes from some hands-on experience at an acquaintance's house.

Should you wish to improve your listening, I recommend you investigate and purchase/make/install a better antenna than what you currently have; if you do already have a very good external antenna and do not wish to change it, I think that you will get the best performance possible (in the price range you are investigating) with the Satellit 800.

I have read that the RS 394 is good for casual listening to stronger SW stations.

If you still wish to buy one of the two receivers you mention, I would suggest the ICOM - while not so good (in stock form) for broadcast listening, it is very good for hearing utilities and it can be customized (for a price!) by KIWA; their upgrades really do improve the set but then, after all is said and done with customization, the radio is well out of the price range in which you seem interested.

I hope that my opinions are of some help to you.

Best,

Joe

You are generally better off attaching the supplemental amplifier to
the human being rather than the device. Are you asking about hearing
assistance for someone who has some hearing loss or is truly
fundamentally deaf.

If the former there are several really amazing fully digital
programmable aids available from your local audiologist.

If the latter you should consult an EN&T guy.

Why do you assume I have "objections"? I was stating my shock and surprise at your claims. Is there something wrong with that? Is it a violation of some "rule"? I have no hands on experience with the Icom or the Palstar. So, I don't think I'm in a position to have "objections" to what you say. However, I do find your claims surprising and I'm free to express my surprise in this group.

If you're in some position of authority I don't know about that empowers you to dictate what people can/cannot say in this group, please give me the details. Otherwise, mind your own damned business.

Steve

I'm more into the hardware than anything else. HFBC has gone to shit
and the GHFS ain't as lively as it used to be. USCG SAR is
occasionally interesting.

I just like the shiny radios. Very shiny. Yeah.

Dear Sir,

1. You quote the following: "In my opinion, your Grundig Satellit 800 is a better receiver overall than either the Palstar 30CC (with which I have no experience) or the
ICOM IC-R75 (with which I have limited experience)."

You did NOT quote the rest of the paragraph: "I am basing my opinion about the Palstar from reviews I have read (primarily PASSPORT's) and my opinion about the ICOM comes from some hands-on experience at an acquaintance's house."

2. I do not claim any "authority" (your words, not mine). The original post asked for opinions and I gave mine and clearly explained on what I based those opinions. You, on the other hand, have not helped or attempted to help Mr. Rabinowitz in any way.

3. I do not know you, sir, or anything about you. I can only base my opinion about you on what you write and I cannot recall anything you have written as being helpful to anybody. You have as much right to your opinion as anyone and you certainly have the right to disagree with mine. However, you'd better be able to back up any claims you make, as I do. My SW experience runs almost fifty years and I can and do substantiate all that I write. "Negative" comments, such as those you seem to often post, are of no use whatsoever.

Your last sentence "Otherwise, mind your own d***ed business", I'm afraid, shows you up for what you are: a congenital idiot.

Joe

Dear Mr. Rabinowitz,

I am sorry that your post has become a forum for "back-biting" (as posts on this group often seem to do) and I apologize for contributing to this foolishness.

I hope you will read my original post here and take it for what it's worth. Thus far I seem to be the only person who has actually answered your question. I hope others will ignore the nonsensical posts (of which mine were a part) and will write some helpful opinions for you to consider.

In whatever you decide, I wish you the very best of good listening.

Joe

I'd pick the R-75. It's the best ICOM for like 20 years. It has a
keypad. Mine works great out of the box. I use SSB mode for
everything.

Personally, I wouldn't even take it out of the box before I employed it as a doorstop.

(Yes, I've used one.)

> you seem to often post, are of no use whatsoever.

You didn't back up any claims. You passed the buck to Passport and
cited your own limited experience with the Icom. And I don't care how
long you've listened to shortwave. If you come onto this group and try
to tell people what they can/cannot say, it's only a matter of time
before someone tells you to fuck off, "sir". In this instance the
pleasure is all mine.

> Your last sentence "Otherwise, mind your own d***ed business", I'm

Cuhulin,

The WTC used what can be described as a Steel Lattice Cage Frame.

The Fire Retardant use in the WTC during it's construction was an
EPA qualified product that did not have Asbestos and other materials
that would have made it effective.

The Intensive Heat of the Fire {Over Time} Weaken the Steel which
caused the Lattice Cage to Deform and loss it's Structural Integrity
Under-the-Weight of all the Building Floors above it.

The Fire occurred simultaneously over several floors in an instance
which resulted from the Jet Fuel and the Combustible Materials
within the Buildings i.e. Office Paper Products and Office Furnisher.

The Fire Suppression System in the Affected Floors was Damaged
and Destroyed and the Fire was able to continue un-checked.

All-of-the-Above - Are the general reasons that are given for the
Collapse of the WTC Buildings.

at least this is my simple understanding of what happen ~ RHF

ok,I have the answer.Flip a coin,heads,the Palstar,tails,the
Icom.Whichever one comes up,buy it and try it out for a few weeks and
sell it on eBay.(you could probally sell it on eBay for more than you
paid for it at the store) Do the same thing with the other
radio.Then,after you decide which one you like the best and you want to
keep,go ahead and buy one just like it from the store.

You'll have to ignore a lot of the nonsense that transpires on this group. I hope that we eventually get the group moderated, but it's difficult to make that happen.

Anyway, I don't know if you've considered a software defined receiver, but the Ten-Tec RX-320D is supposed to be a great value at around $350. If you'd like more detailed information about it, just go here:

DAVE SUMNER, K1ZZ, CEO OF ARRL, RESPONDS TO K1MAN's LETTER

December 2, 2005

Glenn A. Baxter
Long Point Lodge
Belgrade Lakes, Maine 04918

Dear Mr. Baxter:

This is in response to your email of December 1, 2005 inquiring about W1AW operating practices.

W1AW is unique in that it is the only station that operates in accordance with the provisions of 97.113(d) of the FCC rules. The rules require that the station schedule operations on at least six MF and HF amateur bands using reasonable measures to maximize coverage, and that a schedule of operating times be published at least 30 days in advance.

As W1AW trustee it is my policy that W1AW adhere to the FCC rules. The station operates in accordance with the published schedule. The W1AW trustee and control operators also take seriously our obligation under 97.101(b) to cooperate in selecting transmitting channels and in making the most effective use of amateur service frequencies. For example, we transmit two brief warning messages prior to the commencement of a scheduled transmission as a courtesy to operators who may be engaged in communications on the scheduled frequencies (Ed. comment: This practice was FIRST used by K1MAN), and we deliberately keep our voice bulletin transmissions brief and limited in number.

Sincerely,

(signed)
David Sumner, K1ZZ
Trustee, W1AW

K1MAN editorial comment:

In other words, 97.113(d) of the FCC rules allows W1AW to pay a control operator for a 40 hour work week (pecuniary interest) for doing exactly what K1MAN does without any pay whatsoever, and doing it infinitely better, thus drawing a $21,000 "fine." W1AW "dumps" on existing QSO's every day and K1MAN only when some moron like K3VR

parks there on frequency in order to be "dumped" on, a criminal violation by K3VR of the Goldwater Law. Sumner was a law school drop out and Hollingsworth was sick on the day they taught law at law school. Sumner's letter is a "get out of jail free" card for K1MAN, and Dave will certainly be called as a witess in court along with Hollingsworth. Both men are in alleged criminal violation of the Goldwater Law as well by failing to discourage interference with K1MAN amateur information bulletins:

It is an interesting snub that K1ZZ does not use the call K1MAN in his arrogant middle manager mental midget letter, Hi. Eat your heart out Dave, AARA, the American Amateur Radio Association, has more class than ARRL, the "national association for amateur radio." By the way, exactly what is a "radio relay league" anyway?

1 December 2005

Dave,

What is W1AW's current policy with regard to its bulletins, and can you refer me to the ARRL Board minute which established this policy? Specifically, does W1AW listen and/or QRZ each published scheduled frequency before transmitting? If the frequency is busy, does W1AW QSY, delay, or even terminate the scheduled bulletin?

The policy published in QST that I have found is to stick to the published schedule regardless of whether the frequency is busy or not, just as is the policy of K1MAN for information bulletins, which is also consistent with many years of W1AW operating practice as well.

You will remember that K1MAN was "fined" in 1990 with regard to this policy, and my appeal of these "fines" to the full Commission was "deep sixed" and thus blocking my further appeals to the D.C. Court of Appeals and the United Stated Supreme Court. Also, these "fines" were never litigated in Federal District Court here in Maine, and my subsequent civil suit to resolve this matter in Federal District Court against the FCC was dismissed. My related civil suit in Federal District Court against ARRL was also dismissed. My many attempts to resolve this matter have thus been repeatedly thwarted. K1MAN was then "fined" again regarding this same policy in April of 2005, a full fifteen years after the original FCC action, thus creating a further legal nightmare for the Commission, of course.

I am a member of ARRL. Thank you for your attention to this request.

Best personal regards. 73.

Yes they do you tard. "Alledgely"? There were passengers on that plane,
where did they go?
Guess you haven't seen ALL of the Pentagon crash pictures either.
Olenty of plane parts to be seen...

A lot of insulation got blown away from the plane crash explosions as
well. The fireballs were HUGE.

1266. Re: Palstar or Icom

Newsgroup: rec.radio.shortwave
Date: 2005-12-07 23:57:25 UTC
From: pete ke90a <pete@siliconengines-ltd.com>
Message-ID: <1133999845.293015.286570@g49g2000cwa.googlegroups.com>
Source record: 53275

I do have both the Palstar R30 and the Icom R-75, with the R75's MW attenuator removed.
Both receivers are very good. Out of the box, the Palstar has the same sensitivity as the Icom unit has after it is modified.
The audio from the R30 is much cleaner sounding than the R75. One of these days I will do the audio mods on the R75.
A point to consider about the R75.....the radio's internal 5V regulator is dissipating too much power. The stock Icom power supply unit has an output voltage of close to 18V. This means that 13V is being dropped across that 5V regulator.
I didn't know which radio I liked better, so I bought both of them. If you like features and decent performance, the R75 is a good choice. If you are looking for better audio quality and better signal handling with fewer features, the R30 is a good choice.
I measured the overload point on the R75 at 100mV, while the Palstar R30 doesn't overload until you apply 1V of RF at the antenna input. Does this mean that the R75 is not very good? Of course not! The R75 overload point is in the same range as the Lowe HF150, HF225 and the HF250. No complaints about the overload figure.
In conclusion, if you like the signal handling characteristics/sound of tubed receivers, you will like the Palstar R30. My favorite? You guessed it.....the R30!

Pete

Let me summarize...

My hairline (or lack thereof) is germane to what?

You're still too cowardly to use your own name and have to hide behind a forgery.

You forge the sender of the letter as one of the people being slammed in the letter (as if they would slam themselves). Sheesh, what a rocket scientist you are.

Please feel free to post again when you get a brain...and when you are man enough to do so without hiding.

Still LOL at the coward!

I used to hear them in northern Virginia back around 1966 using an RCA AA5. When I heard them, I knew I was really getting something. I could get KOA in Denver much more reliably. Might have heard Los Angeles, faintly, but I can't recall. Like an idiot, I threw out my old QSL cards years ago. Why would I ever want to look at them again. Wish I hadn't done that. I didn't have a huge collection, but still....

I have the R-75..

Very very sensitive..
Nice controls..
Lacks Broadcast F.M.

Needs ~100 acres RF free zone and a decent antenna..

Will eventually get the Audio Mods..

Great receiver . . . .

Greetings! Sorry about the RCI and CRI mixup. Glad you picked up anyway on what I meant. I had just never noticed the close frequency transmittions. Interesting to hear the different flavor of everything from the stiffness of one of the speakers to the loose casual feeling of the other pair. Once again the target audience makes a big difference. Thanks for the info! Have a great week! Jon in South Carolina.

I have a Satellit 800 and a custom modded 394 and I have owned several versions of the 75 and owned a 30C

For the best listening quality, the best choice is an 800 modded with my speaker upgrade as described on my web site at http://home.comcast.net/~maghakian

The 75 is great for utility listening and terrible for SWBC. the 30 is a nice radio but I feel the 800 is a much better choice.

you should also check out my DX-394 mod page on my web site also for increasing the listening quality of the 394

Body handling: HTML body converted to readable text

I would have said the biggest threat to the USA is all you kool aid drinkers believing each new administration lie because it fits so nicely with the lies they told you the week before.
I never thought I'd say it, but I'm with Cuhoolio on this. It's often asserted and I've never seen it refuted, that never before or since 9-11 has a steel framed building collapsed due to fire. If someone can cite some evidence to the contrary I'd love to see it. Under perfect conditions burning jet fuel reaches just over HALF the temp. required to melt steel. The black smoke issuing from the World Trade Centers indicated that the fires were starving for oxygen and burning significantly cooler than at max. temp. I don't know if any of you have seen a kerosene heater, but they're made of maybe 24 gauge sheet steel, they burn as cleanly as possible, (max. temp.,) they can be refilled ,in use, and can burn for months at a time. They never melt."But all that paper in those offices" you're probably thinking. Have you seen a wood stove? You can cram it full of bone dry hardwood and burn it all winter long, if you're attentive enough, and that quarter inch of cast iron (weak compared to steel,) will never collapse. Never. The tremendous fireball outside the south tower was impressive but had nothing whatsoever to do with the building's collapse, which oddly, took roughly half the time that the north tower took to collapse despite having only a fraction of the burning jet fuel. Tapes of the firefighter's radio communiocations were released a couple of years ago. A group of firemen had reached the site of the crash and described the fire as being limited to two areas and as something they could "knock down with two lines." The fires were dying down and the temperatures that could never have approached those necessary to melt steel had cooled considerably. Guiliani said later that day that they moved out of their command center in WT7 when they were told the tower(s) would be coming down in 10 or 15 mins. Odd considering what the firemen were saying and especially if the assertion that steel framed buildings had never before collapsed because of fire is true. And it's a shame Guiliani never shared that info with the firemen.
The time the towers took to fall also suggests that the official story is horseshit. It's usually stated that the towers took about ten and a half seconds to fall. Physics tells us that a brick, thrown off WTC1or2's observation deck would have taken nine and a half seconds to fall, through a vacuum. This means that the towers collapsed through the path of MAXIMUM resistance, through hundreds of thousands of tons of concrete and steel designed to support 5 times the expected weight at very near free-fall speed. Am I the only one having trouble swallowing this? Building engineer William Rodriguez was in the first

level basement of the north tower on the morning of 9-11 and describes
hearing an explosion BELOW and having just enough time to think "that
must be the generator" when he heard a noise way,way above which was
the plane striking the tower. Moments later a man burned, with the
skin hanging off his arms staggered in from the level below. Firemen
at the towers that day describe a series of explosions at the
beginning of one of the towers collapse. Pools of still molten steel
were found 4 wks. later when the rubble was finally removed from the
bottom level, an oxygen poor enviroment. Can someone suggest something
beside high explosives that might account for this?
Unfortunatly this only scratches surface of what we're told are the
"facts" of 9-11 that seem to defy common sense. On that note let me
say seasons greetings and best wishes to all, and enjoy your
koolaid,(that nice Mr.Bush wouldn't lie to us!) I think I'm ready for
a beer.

Thanks to dxAce for the heads up on Diego Garcia.
Very much back on air with strong signal here.
4319 came booming in well before sunset here with a strong signal, perhaps indicating they are using quite a high power TX, maybe 10 Kw.
In the morning I am getting 12579 quite clearly as well.

Diego Garcia is 9,600 miles from dxAce in Michigan, so that is a good catch = well done!

A more challenging DX catch for me is AFN Pearl Harbour which is 11,600 miles from my QTH (path over the Antarctic).
10320 comes in quite regularly but 6350 is more difficult and less frequently heard.

13362 AFN Guam was also coming in nicely this morning - doesn't often come through on this frequency.

Have fun and good DX

www.devilfinder.com How much temperature is requred to melt steel?

I already knew the answer to that,I own an oxycetelyne cutting torch rig and an old Lincoln crackerbox welding machine.I just wanted y'all to see for yourself.

And those big steel beams in the WTC buildings were not ordinary steel either,they were special hardened steel beams,made in Japan because U.S.A.steel companies didn't have the capability to produce such long lenghts of steel.Over 24 tons of the steel from the ruins of WTC has already been cast into the nose section of the new USS New York Ship which is being built right now by Northrop Grumman in Pascagoula,Mississippi.She sets sail in 2007.USS New York's motto is Never Retreat,Never Surrender. www.devilfinder.com USS New York Ship Pascagoula Mississippi

A good source for current utility frequencies is the World Utility News
websitr. I subscribe (snd occasionally contribute) to their newsletter
that is free and you can have email to you daily. It's more then hust
Mil-A;e and is very informative covering all HF modes. They also link
to a Number and Oddities newsletter if that interests you. The
contributors are knowledgeable, many from the U.S.

They're certainly coming in well here, much better than when I last heard them in 2000. Whether they upgraded the antenna or transmitter I don't know. Perhaps just our current position in the solar cycle.

At any rate they were off for some time, I recall that the original antenna may have been destroyed by a tropical cyclone, but not sure. If that was the case they were certainly in no hurry to repair it.

Who knows how long they may stay on this time.

Will be using a long wire strung around inside of the house for now when I get my tabletop. Where the radio will be there are no pipes etc, what is the best way to ground, can I use the center screw of the electric outlet. Been using protables now & a set top with a whip built in antenna (RS394).

I really don't want to jump into the rest of this debate, but per your statement above, I hope you do realize that *other* things can happen to steel besides melting...

Heat (below the melting point) *will* cause "phase changes" in the crystalline structure of the steel and *will* cause significant changes in the physical properties of steel, including strength.

Metallurgy 101

We now return you to your regularly scheduled conspiracy theories...

Huh???

...and Chia pet has what to do with anything???

I believe the original thread was about freedom of speech and expression, not Chia Pets. But keep trying, and keep dodging and dancing around the original issue; you may eventually get it right. Every now and again even a blind monkey finds a banana...

Oh, sorry, I almost forgot. You're the clifto that said in regards to Colin Powell:

> He wasn't getting enough spotlight. He figured the Democrats would offer
> more spotlight.

Yeah, Powell was the third most powerful man in the world and a major player on the world stage...and the Democrats are going to give him "more spotlight"?

clifto-a true mental giant!

You just keep watching those Chia Pet commercials, boy.

Thanks. I'll show how long it has been with the following question.
Are separate decoding modems used any more or is most digital ute work
done via the pc.

I dropped out when my PK232MBX couldn't be used for much decoding.

There are pc cards that decode but I use PC Software that only requires
a regular cable from the receiver to the mic input on your pc. There
are alot of programs available on line. Some freeware others shareware.
Again if you Google Soundcaed decoding software there at lease 2 sited
out there that list them with descriptions and links to downloads.

PCAle
PCHFDL
and iNavtes
are free

JVComm43 is a great shareware program for
HFFAX, RTTY, Navtes, SSTV, Amtor

A Few Years ago I purchased Skysweep Standard that does abot 25
different modes and had a built in DSP module and Audio Recorder.

The receiver that you use should be selective and able to tune to 1 khz
for best results and use USB unless noted by the list you refer to

Good Luck and enjoy,
Charlie

December 02, 2005
North Carolina Illegally Certifies Diebold E-voting System
Board of Elections Ignores Rules to Escrow Code, Identify Programmers

Raleigh, North Carolina - The North Carolina Board of Elections certified Diebold Election Systems to sell electronic voting equipment in the state yesterday, despite Diebold's repeated admission that it could not comply with North Carolina's tough election law. The Electronic Frontier Foundation (EFF) believes that this raises important questions about the Board of Elections' procedures as well as the integrity of Diebold's bid for certification.

In all, three companies were certified for e-voting in North Carolina: Diebold, Sequoia Voting Systems, and Election Systems & Software. However, Keith Long, an advisor to the Board of Elections who was formerly employed by both Diebold and Sequoia, has said that "none of them" could meet the statutory requirement to place their system code in escrow. Instead of rejecting all applications and issuing a new call for bids as required by law, the Board chose to approve all of the applicants.

"The Board of Elections has simply flouted the law," said EFF Staff Attorney Matt Zimmerman. "In August, the state passed tough new rules designed to ensure transparency in the election process, and the Board simply decided to take it upon itself to overrule the legislature. The Board's job is to protect voters, not corporations who want to obtain multi-million dollar contracts with the state."

Last month, Diebold obtained a broad temporary restraining order that allowed it to evade key transparency requirements without criminal or civil liability. The law requires escrow of the source code for all voting systems to be certified in the state and identification of programmers. Diebold claimed that it could not comply because of its reliance on third-party software.

Monday, responding to EFF's arguments, a judge dismissed Diebold's request for broad exemptions to the law and told Diebold that if it wanted to continue in its certification bid, it must follow the law or face liability. Diebold had told the court that it would likely withdraw from the bidding process if it was not granted liability protection. But instead, Diebold went forward with the certification bid.

Diebold's certification now means it is permitted to sell e-voting equipment in North Carolina. But Zimmerman says that any county that buys from Diebold is taking a risk.

"If Diebold's certification is revoked, counties using their equipment could be left holding a very expensive bag," Zimmerman said.

Despite Long's assertion, at least one Diebold competitor -- Nebraska-based Election Systems & Software -- has publicly stated that it is capable of meeting the escrow requirement for the code used it its system.

For more on the judge's decision Monday:

Also, remember that people are pretty darn ingenious when they put their minds to something, both good (landing on the Moon, for instance) and bad (destroying the WTC).

Thank you. I didn't want to bring up phase changes
or items like austenitizing, but it's well documented.
Anyone can go to a university with a decent engineering
department and get access to books with reams of
charts on how to change steel phases based on
temperature and time. If you really wanted to, you
could buy them yourself and study them, but you'd
need an engineering or physics background to
understand them well. In most cases, you don't have
to come close to melting steel to cause significant
problems, especially when you think about the give
that the steel frame had to have in order to withstand
the winds at that height. Changing the phases by
injecting heat and carbon (from the paper) to
make it stiffer would be fatal to the structure. Meltimg
isn't even necessary, really, but the heat from jet fuel
alone isn't enough; the paper burning caused the heat
to be cranked up an order of magnitude.

I've heard digital signals (though not sure it is the standard you mentioned) on 5703kHz. I used USB. From the FLIP, 15091kHz should have similar traffic. The frequencies are listed as Raymond 27 (Mountain Home), though I've heard them in use in the Nellis ranges.

They are listed in the FLIP document ap1b.pdf

I've thought seriously about redoing the cabin for year round living,
and moving up there. It's RF quiet, with even cell phone service tough
to come by. And local radio is God Awful. There's more than enough real
estate for a decent length of wire, or more involved installation, and
it's 5 miles to the nearest human, and that's across the lake.

The SW listening is pretty decent. Even MW DX is good.

It really is a great place to get away.

And stay away.

Source record: 53447

SR,

Vice using the questionable the Ground {Green Wire} of your
Household AC Power System.

Why not consider a simple Around-the-Room {Ceiling Level}
Horizontal [Flat] Loop Antenna. The Loop Antenna is consider
a 'blanced' Antenna that does not require a Ground and is
Horizontally Polarized so it generally pick-up less man made noise.

The "In-Door" Horizontal [Flat] Loop Antenna is easy to build;
usually is relatively long 40-60 Feet for an In-Door Antenna;
and relatively lower noise pick-up to an in-door vertical antenna
or long wire antenna.

The Radio or Receiver can be run off of AC with an AC Ground
connection via the AC Power Plug or DC without any Ground
connection at all.

something to consider - iane ~ RHF

Wow, three guys writing about aliens hanging their butts out a window?

That I can imagine -- the guys writing it, I mean. Perhaps during a
drinking session after working all day on something stressful.

What I find harder to imagine is how it got published.

no, the aliens -invented- the moon. They must, therefore, have also
invented asses, because you can't really have an ass and not moon.

This proves conclusively that aliens were involved with human
genetics.

It also explains modern politics. The whole of the current
"conservative" administration, if you think about it, are people with
no butts. Cheney, Bush, Condoleeza Rice, indeed the whole political
movement is made up of people with no asses. These are a different
-species- from us. No wonder they are such miserable bastards, I
shudder to think how they, you know, evacuate.

WF,

Gee for a 'portable' AM/FM Radio to 'tote about'
it would be the Grundig S350 / Tecsun BCL-2000.
http://www.universal-radio.com/catalog/portable/3500.html

For a 'portable' AM/FM Shortwave Radio to 'tote about'
it would be the Eton E1 Receiver with XM Satellite Radio.
http://www.universal-radio.com/catalog/portable/0101.html

For a 'small' mobile AM/MW Shortwave Receiver to
use as a Field Radio it would be the Icom IC-R75
using the Car's Battery.
http://www.universal-radio.com/catalog/commrxvr/0175.html

For a "Travel" 'portable' AM/FM Shortwave Radio to
carry in my luggage while Travaling my choice would
be the Sony ICF-SW7600GR with the Sony AN-LP1
'portable' Shortwave Antenna; plus NiMH Batteries.
http://www.universal-radio.com/catalog/portable/0360.html
http://www.universal-radio.com/catalog/sw_ant/3676.html

WHY - All of the above have a LCD Frequency Display;
a real Tuning Knob; built-in Speaker and long Battery Life.
(Sony has no Tuning Knob)

hey - it's just an opinion folks
and i do own all four radios ~ RHF

Machine Politics In the Digital Age

By MELANIE WARNER
Published: November 9, 2003

IN mid-August, Walden W. O'Dell, the chief executive of Diebold Inc., sat down at his computer to compose a letter inviting 100 wealthy and politically inclined friends to a Republican Party fund-raiser, to be held at his home in a suburb of Columbus, Ohio. ''I am committed to helping Ohio deliver its electoral votes to the president next year,'' wrote Mr. O'Dell, whose company is based in Canton, Ohio.

http://www.cio.com/archive/060104/evote.html

"We oppose the idea of a voter-verified paper trail," says Harris Miller, president of the trade group Information Technology Association of America. Introducing paper into the mix, he says, defeats the improved efficiency and reliability e-voting promises. "There was never a golden age when paper ballots were accurately counted," Miller says. Adding paper to e-voting will only make the process of administering elections more costly and time-consuming without improving accuracy, opponents assert.

Con Job at Diebold Subsidiary
Associated Press
Dec. 17, 2003 PT

SAN FRANCISCO -- At least five convicted felons secured management positions at a manufacturer of electronic voting machines, according to critics demanding more stringent background checks for people responsible for voting machine software.

Voter advocate Bev Harris alleged Tuesday that managers of a subsidiary of Diebold, one of the country's largest voting equipment vendors, included a cocaine trafficker, a man who conducted fraudulent stock transactions and a programmer jailed for falsifying computer records.

How about radios that's modern on the inside,but looks on the outside (cabinet) like one of those nifty lookng radios from the 1950's or 1960's.That was some real neat styling back in those years.Nowdays,they mostly all look just alike,like those cars going up and down the roads.You have to get up real extra close to them cars to see what car company made them and even then,it's hard to tell.

Steve - I Am Glad You Asked :o) ~ RHF

Matt Drudge - from Wikipedia the Free OnLine Encyclopedia
http://en.wikipedia.org/wiki/Matt_Drudge

Matt Drudge of the "Drudge Report" Early Years :
http://en.wikipedia.org/wiki/Matt_Drudge

Drudge was relatively unknown before he began his Report and made national headlines. He was raised in Takoma Park, Maryland, near Washington, DC, where he was reportedly a "loner" and a news junkie. He graduated from Northwood High School in 1984 ranked 325th out of a class of 355. He said, "The only good grades I got in school were for current events." At an early age, he worked delivering papers for the Washington Star and spent much time reading the paper.

For many years, Drudge took a number of odd jobs such as night counterman at a 7-Eleven convenience store, a Time/Life books phone salesman, and sales assistant at a New York City grocery store. In 1989, he moved to Los Angeles where he took up residence in a small Hollywood apartment. He took a job in the gift shop of CBS studios, eventually working his way up to manager. It is here that he was apparently privy to some inside gossip, part of the inspiration for founding the Drudge Report.

Yes Skysweep as sensing capability. Carful adjustment of the input to thesoundcard is necessary. BTW the people at Skysweep are very good with any assistance you may need. It's extremely easy to set p so you shouldn't have a problem. They also upgrade the software for free) . Check and join their Skysweep Yahoo group, there a lot of databases and custom decoding modules available for download there done by some "expert" users. You can also download the owners manual from skysweeps' website along with the standard demo.

I appreciate the input from those more knowlegable than myself on this subject. The fact that sub-melting point temperatures can cause weakening of the steel is not in question. The fact the Madrid fire and the hotel fire in Philadelphia whose name escapes me at the moment, burned much longer and much hotter than the WTCs without collapsing suggests to me that some other mechanism was involved. Your assertion that the addition of burning paper caused the temp. to rise by "an order of magnitude" seems unlikely. A minutes googling reveals that paper burns at roughly the same temp. as jet fuel and most paper in an office is likely to be in file cabinets or stacked in piles where there will be inadequate oxygen for complete or vigorous combustion.

Unlike the Kiwa loops, the Quantums don't seem to turn up on Ebay very
often. In fact, I'm not sure I've ever seen one there. Since the
Quantum loops are still available new, I guess the used market just
isn't as 'hot' for them.

I haven't been to down town Jackson (I live about four and a half miles West of down town Jackson) in a few months.As far as I know,the Walter Sillers (steel and concrete and glass) building in down town Jackson is about twenty or twenty two storys tall (unless a newer taller building around here has recently been built that I dont know about and I really couldn't care about either) and there are quite a few other buildings in the Jackson area that are from ten to about fourteen storys tall.(I know,those are not tall buildings compared to really tall buildings in cities that are larger than Jackson,we certainly can't call the tall buildings here in Jackson,Skyscrapers and I have been to many big cities before too,Tokio,Hong Kong,Chicago,Houston,Dallas,San Francico,Atlanta and others) But if a Boeing 757 Airplane accedently crashed into one of the tall buildings around here,do y'all expect me to believe any of those buildings would be crashing down? I believe in Reality.

>Why not consider a simple Around-the-Room {Ceiling Level}
Horizontal [Flat] Loop Antenna. The Loop Antenna is consider
a 'blanced' Antenna that does not require a Ground and is
Horizontally Polarized so it generally pick-up less man made noise. <

IIRC, the impedance for this type of antenna is about 100 ohms. I
would suggest that, if this type of antenna is used, for best match it
be mated to the low-Z input of the radio (50 ohms rather than 500),
although an appropriate transformer could easily resolve this (probably
minor) problem regardless of the input.

I'm guessing the high bidder is a Gene Scott fan.

The cost to paint it and fix the problems could easily exceed what they paid for the car. My guess is the total cost will exceed the value of the completed car.

Not when you consider that all of that paper got blown
throughout the building, providing oxygen to all
those stacks of paper.

If you set fire to a stack of paper, it'll burn rather
lamely. If, however, you allow air to enter into
the stack by raising the spacing between the
sheets of paper, it'll burn very quick and very
hot. Not as hot as magnesium, but hotter than
you'd think. Hmm, hot reflects temperature, but
I'm thinking hot as in energy dispersal. Temperature
isn't as important here as is heat, which is reflective
of the energy being released.

Paper burns at the same temperature wherever
you go if you've got a stack or not, but the amount
of energy released is different. You can have the
potential energy in a stack of paper released
slowly by simply lighting the stack on fire, or
quickly if you provide gaps for the air to flow.

So, take a floor of the WTC. Typical office floor.
It's got furniture, carpet, walls, and paper. Even
nowadays, there's still a lot of paper in an office.
There's also plastic as well. Now, inject a buttload
of flaming jet fuel into that floor so that the entire
floor is engulfed immediately. The temperature
of the burning fuel won't be so high as you think
(probably not enough to melt steel), but the sheer
amount of energy released at once is tremendous.
It's the at once that's important. All the energy
in the jet fuel, plus the paper and the other office
supplies, burning in a confined area like this
would release enough heat to either perform a
phase change on the steel or weaken the steel
throughout an entire floor or three. Once one
floor goes, it's sayonara for the rest.

Dear Steve,

If you run any kind of wire in your house, you probably will not need any grounding at all. Just to check, however, try the radio without grounding at first and then try hooking up a ground and see if there is any improvement or any difference at all. (The ground on your electrical outlet is fine for this experiment.)

RHF and BPNJensen's posts are also correct. A loop antenna used inside a house may give better performance than just plain wire run randomly and loops generally need no grounding.

As a matter of fact, in my personal experience, a loop antenna, indoors or outdoors, will afford much better reception quality (S/N ratio) than long wires in areas where there is a great deal of local electrical interference as loops tend to "reject" such interference.

You might want to try to make (or buy) a loop antenna and mount it in a window. There are several sources on the web for instructions and a very good book is Joe Carr's LOOP ANTENNA HANDBOOK.

Do try a good antenna on your Satellit 800. I think you'll be very pleased.

Best,

Joe

That great big hole in one of those WTC buildings and that woman (there were two women) standing there and looking out.Why didn't the heat get her/them? Those two 110 story tall WTC buildings were designed and built to withstand the impact of large Jet Aircraft.Those two buildings stood there all those years since about 1973,swaying to and fro in the wind (and it does get very windy wayyyy up there too,all the time) dancing around and around,just ask any window washer crew about that or anybody whom has stood on top of those buildings before.If any of those floors were going to break loose and fall,they would have done so many years ago.Most of the jet fuel had blown on outside of the buildings during the crashes.One of the Jet Engines fell down onto a street,guess what? it was the wrong kind of Jet Engine! fed govt once actually blamed it on cheap quality bolts that were holding the floors up.

The loop will be unbalanced if you don't use a balun. Of course, my
solution is to buy the Wellbrook ALA100.

At 40ft of wire, I find two BCB stations about 20 miles away force my
7030 to switch on the attenuator. I have maybe 10db before the s-meter
is pegged, so I wouldn't go much beyond 60ft if you get the wellbrook.

Palstar R30 is a high performance radio. What it doesn't have are:
gimmicks,huge and mostly empty cabinet,synchronous detector,keypad and
older siblings. Independent reviews estimated its
3rd order intercept at 15 to 18 dBm. That is even higher than JRC 535D ,
Drake R-8(x) and the most expensive Icoms . My R30CC contains 2
Collins torsional filters. Selectivity is incredibly good, on equal
terms with Harris RF550,Drake R7, Racal 6790...and even the holy
Collins R390(non A) !

You probably won't hear any differently with a ground.

And be careful where you attach one: I know a ham who lost his whole
station -- lightning hit and came up through the ground wire and fried
his equipment.

Unless you can hear a difference, I wouldn't bother.

>and then there is 'thou' the individual {Singlar} ~ RHF

I hate these language wars, but in the interests of accuracy, "thou" is
originally the singular of the plural "ye" and/or "you." "You" has
mostly replaced "thou/thee" as a singular by now.

With Terror Alerts?

Consider the implications. The Terror-Alert color codes are the shades
of the mysterious and terrible excretions of our otherdimensional
overlords!

So -- thank God that Terror Alerts are coded by color, not texture!

Some well-placed aides (who wish to remain unnamed for their own
safety) claim to have identified the real meanings of several colors.
"Green" means "We pinched out this humongous no-bid contract, and we're
flowin' regular!" And "Red" means "We sucked down beaucoup wetlands
yesterday -- and boy, do those water moccasins hurt on the way out."

No wonder Tom Ridge went bonkers trying to interpret the royal stools.

The steel doesn't melt. It is made markedly (and predictably) weaker by the high temperatures and can no longer stand the load. This is not hard to demonstrate and many steel beam buildings have collapsed in fires. The World Trade Center towers were designed to stand the stress of an airplane strike but the designer never figured on a fully loaded plane's fuel burning like that. In retrospect, he probably should have.

The Empire State building was hit in the World War II time frame by a military plane (bomber?) but there was no real fire AND that building is designed much different.

Steve -and- For One and All,
.
The Quantum QX 8" and QX Pro 15" do show up on eBay :
But since they are still being made by that wonderful American
Craftsman and Electronic Artist "Gerry Thomas" under the
business name of "Radio Plus+" and still can be found at
the DX Tools .Com website => http://www.dxtools.com/
.
eBAY PRICES and AVAILABILITY - Kiwa -verses- Quantum :
The 'legendary' Kiwa Air Core MW Loop Antenna simply
gets part of its 'legendary' Aurora from the fact that it is no
longer being made; and therefore there is a limited number
of them and that number may be getting smaller with the
passing of each day, week, month and year. On eBay the
Kiwa Air Core MW Loop Antenna often sells 'used' without
any warranty for more then the original retail price of about
$400. This is in contrast to the Quantum QX 7.5" and
QX Pro 15" Ferrite Loop Antennas that still can be bought
"New" with a Limited Warranty for about $200 and $300
respectively. Question ? Why buy a used Quantum on
eBay without a warranty; when you can buy a New one
with a Warranty; unless you can get it at least 30%
cheaper on eBay. Maximum Price for the Quantum
QX 7.5" should be $140 +S&H and QX Pro 15" should
be $210 +S&H - IMHO otherwise Buy-It-New direct from
the Builder Himself - Again IMHO.
.
.
Now We Can Take The "Quantum" Leap To :
Gerry Thomas = Radio Plus+ = DX Tools .Com are all
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/5711
there now to serve you and provide the Quantum "QX"
Ferrite Rod Loop Antennas for your LW and AM/MW
DXing needs => http://dxtools.com/index.html
* Radio Plus+ = DX Tools for the Serious Radio Listener *
QUANTUM QX PRODUCTS => http://dxtools.com/PRODUCTS.htm
QUANTUM QX AM/MW Loop Antenna => http://dxtools.com/QX.htm
QUANTUM QX PRO LW/AM/MW Loop Antenna => http://dxtools.com/QXPro.htm
QUANTUM PHASER =>http://dxtools.com/Phaser.htm
QUANTUM Q-STICK+ => http://dxtools.com/QStick.htm
QUANTUM COUPLER => http://dxtools.com/QCoupler.htm

Protecting the antenna means providing lightning with an
alternative path to earth. Your building does that just fine.
But be better advised to earth using a lightning rod located
above the roof.

Safety ground system and earthing system share many
components. Different systems for different purposes with
some common parts. AC wall receptacle is not an earth
ground. An antenna is earthed so that lightning will not take
a more destructive path via the receiver. Ac receptacle
ground means lightning would spread out inside the building to
damage other electronics.

Connect things to the wall receptacle grounded screw to
protect human life. This is not same as earthing lightning.
To earth lightning, install Ben Franklin's well proven
solution above the roof. Earth incoming transients on utility
wires using either 'whole house' protector or a ground block -
all connected to a common earth ground that remains outside
the building.

R2000SW,

I personal think that the USA should go to Purple Thumbs Method
as an Indicator as to Who Voted on Election Day. To Eliminate
Voter Fraud By Those Who Vote Several Times.

Plus Charge Everyone Who Does Not Vote A 5% Income Tax Surcharge
For Failing To Vote. Voting is a Right and a Duty of Every Citizen.
Those Who Fail To Do Their Duty As A Good Citizen Should Pay
The Price In Higher Taxes.

Voting is a Right, Responsibility and a Duty of Every Good Citizen
and any Citizen Who Does Not Vote Should Pay the DUTY [.]

so say i - my opinions stated as facts ~ RHF

Source record: 53384

BpnJ,

If the Loop were free standing in open Air; then yes what you say
would be generally true. However, the Wire Antenna Element is
usually laying against the surface of the House's Interior Walls
and therefore may not be as theoretical as expected.

TIP - Try the Loop Antenna with both Antenna Inputs the LO-Z 50
Ohms and the HI-Z 500 Ohms on Several Shortwave Bands :
120M - 90M - 75M - 60M - 49M - 41M - 31M - 25M - 22M
- 19M - 16M - 13M - 11M

YMMV - On some the LO-Z may be the best connection and
on others the HI-Z may be the best connection.

BALUN - As you stated a simple Matching Transformer may
provide the necessary Broad Banded 'match' to be able to use
a single In-Door Loop Antenna Input for All Bands.

TWIN LEAD DOUBLE LOOP - Another 'Trick' is to make the
Loop a Double Loop using 300 Ohm TV type Twin Lead wired
in Series with a piece of the same 300 Ohm TV type Twin Lead
from the Ceiling Loop to the Radio/Receiver. In this instance
the HI-Z 500 Ohm Terminals usually work the best and it goes
without saying that the Double Loop is Twice as Long as a
Single Loop :o) This does not seem to work as well with
the narrower and closer together common Speaker Wire.

FWIW - Some Claim that the Double Ceiling Loop Antenna
provides more signal and less noise then a Single Ceiling
Loop Antenna. I have yet to do a side-by-side of the One
or the Two around the same Ceiling at the same time.
Note - I would thing that it would take at least 6" or may
be closer to a Foot between the Single and Double Loops
to give each one a reasonable independent test in the same
room.

Some Food-for-Thought and an Invitation to Experiment
with In-Door Horizontal [Flat] Ceiling Loop Antennas.
[Surprise Yourself :<]

I'd love to see everyone that is entitled to vote do so, but freedom in the US does include the freedom to ignore what is going on.
It does seem a shame though that one who captures 51% of votes cast in an election where less than two-thirds of the electorate chose to vote feels like they have been given a mandate.

I got to compare the Kiwa, the Quantum Qx and the 1 meter (diameter) Wellbrook 1530 loop on a Drake R8B. First of all, regarding the Kiwa, you don't need the regen if you have decent radio. Thus, screw the Kiwa since it only works on BCB. The Wellbrook beat the smaller Quantum Qx, but I don't know how it would compare to the larger Quantum pro. Then again, the ALA-100 and your own wire loop is less than the larger quantum.

Unless your radio sucks, I'd get the Wellbrook and go untuned. The advantage to the wellbrook is you get full HF coverage, while the Quantum only goes to 2MHz.

The ALA100 is billed as an outdoor very long wire version of the Wellbrook loops, but It works well with about a 10ft (length) wire, and exceptionally well with about 40ft of wire.
http://www.wellbrook.uk.com/ALA100b.html
The website doesn't explain the product very well. Here is one implementation:
http://www.lazygranch.com/images/radio/loop1.jpg
The amplifier is at the bottom of the loop.
http://www.lazygranch.com/images/radio/loop4.jpg
Not shown is the wallwart and the interface box you put near the radio.

I've hunted NDB's with the ALA100 using a loop no bigger than a pie plate. Of course, this is without 20 miles of the NDB.

1430. Re: Grounding

Newsgroup: rec.radio.shortwave
Date: 2005-12-09 08:57:50 UTC
From: nm5k@wt.net
Message-ID: <1134118670.210728.55220@g44g2000cwa.googlegroups.com>
Source record: 53390

Will be using a long wire strung around inside of the house for now
when I
get my tabletop. Where the radio will be there are no pipes etc, what
is the
best way to ground, can I use the center screw of the electric outlet.
Been
using protables now & a set top with a whip built in antenna (RS394).
.....
.....
.....

You don't need a ground. I wouldn't bother. Being the antenna is in
the
house, I see no real reason or advantage to use one. Any long wire
you run to a ground, will act more like part of the antenna, than a
ground.

1431. (OT) A Trip Down Memory Lane - US Presidential Elections and So Called "Mandates-By-The-Voters"

Newsgroup: rec.radio.shortwave
Date: 2005-12-09 09:33:08 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1134120788.454844.132200@g14g2000cwa.googlegroups.com>
Source record: 53391

Has,

(OT) A Trip Down Memory Lane - US Presidential Elections and
So Called "Mandates-By-The-Voters"

FWIW - Yes it is True with less-than 50% of the Actual Vote in
both 1992 and 1996 Bill Clinton never the less had a MANDATE
"By-The-People-To-Govern" according to the Liberal Media and
Democrat Party of the USA. = Bill & Hillary "We Are The President"

A TRIP DOWN THE MEMORY LANE OF US PRESIDENTIAL ELECTIONS :

The U.S. Presidential Election of 1992 featured a three-way battle
between Republican George Bush, the incumbent President;
Democrat Bill Clinton, the governor of Arkansas; and independent
candidate Ross Perot, a Texas businessman.
http://en.wikipedia.org/wiki/U.S._presidential_election,_1992
Bill Clinton 43% [Note - Much Less Than 50%]
George Bush 37.4%
Ross Perot 18.9%

The U.S. Presidential Election of 1996 was a contest between
incumbent President Bill Clinton and Senator Bob Dole of Kansas;
and Reform Party candidate Ross Perot, a Texas businessman.
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_1996
Bill Clinton 49.2% [Note - A Little Less Than 50%]
Bob Dole 40.7%
Ross Perot 8.4%
OBTW - Ralph Nadar 0.7%

The U.S. Presidential Election of 2000 was a contest between
Republican candidate George W. Bush and Democratic candidate
Al Gore along with Green candidate Ralph Nader in the mix.
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_2000
George "W" Bush 47.9% [Note - A Little Less Than 50%]
Al Gore 48.4% [Note - Less Than 50% - But More Than The Winner]
Ralph Nader 2.7%

The U.S. Presidential Election of 2004 was between the incumbent
President, Republican George W. Bush and Democratic Senator
John F. Kerry of Massachusetts.
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_2004
George "W" Bush 50.7% [Note - More Than 50%]
John F Kerry 48.3%
FWIW - Ralph Nader 0.4%

US PRESIDENTIAL ELECTION HISTORY :

OH BY THE WAY - 1960 US PRESIDENTIAL ELECTION
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_1960
John F Kennedy 49.3% [Note - A Little Less Than 50%]
Richard M Nixon 49.6% [Note - Less Than 50% - But More Than the Winner
]
Southern (Anti-Kennedy Democrat Slates) 0.9%

The U.S. Presidential Election of 1964
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_1964
Lyndon B Johnson 61.1% = A Clear Winner = "Mandate"

The U.S. Presidential Election of 1968
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_1968
Richard M Nixon 43.4% [Note - Much Less Than 50%]
Hubert Humphrey 42.7%
George Wallace 13.5%

The U.S. Presidential Election of 1972
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_1972
Richard M Nixon 60.7% = A Clear Winner = "Mandate"

The U.S. Presidential Election of 1976
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_1976
Jimmy Carter 50.1% [Note - More Than 50%]
Gerald Ford 48.0%

The U.S. Presidential Election of 1980
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_1980
Ronald Reagan 50.7% [Note - More Than 50%]
Jimmy Carter 41.0%
OBTW - John Anderson 6.6%

The U.S. Presidential Election of 1984
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_1984
Ronald Reagan 58.8% = A Clear Winner = "Mandate"

So we may surmise that since 1960 there have been
Three "Clear Winners" of US Presidential Elections :
Who Could Claim a "Mandate-By-The-Voters"
* Johnson in 1964
* Nixon in 1972
* Reagan in 1984

the numbers don't lie
and the facts are in-fact the facts ~ RHF

I avoid e-bay like the plague. It's a proven sellers' market and e-bay
does a joke of a job policing the sellers than continue to put money
in their pockets. Private feedback & bids are a complete joke and I'd
never think twice about bidding in such a fashion.

>There is an opening for some other company (google perhaps) to give
>ebay some real competition by become a fairer market place. Remember
>when ebay dropped the reserve auction feature (a real time waster for
>buys and their system) but reinstated it when the sellers complained?

I wish this would happen. e-bay needs a wake up call from some real
competition, although google would be hard pressed to lure the sellers
away w/ offering a less seller-centric auctioning environment.

I would say you're missing the main point. The complaints seem to be
more directed to out right lying about the quality of the product. The
fact it's an e-bay bought "piss poor quality" labeled product one
dayby seller #1, then bought/resold by somebody as "mint condition"
the next day by seller #2 is the problem. Well, along with his
shilling which was proven in the past earning him a three month ban,
right ?.

I'm with Tom...

One should NEVER use the metal screw or electrical conduit for an earth ground. Not only is this contrary to the NEC code but it allows ground loop currents to exist along the single ground path due to inconsistent bonding between conduit, flanges, flange screws and...eventually...the ground rod. Lightning will follow the path of least resistance. You will often see a coil (even a single turn) of taped of professional communications atenna systems at the point of entry into the building. This is to provide, however slight, a small impedance to discourage lightning current from taking THAT path and, instead chosing a separate direct ground path.
Do this little experiment: Install a good ground at the entry to your house and run a wire to it for your shortwave receiver. Once done, take an ohmmeter and measure the resistance between that ground wire and the screw on your wall outlet. I have often been surprised at how much resistance exists between the wall outlet and a "real ground." Well, that resistance is probably more than enough to divert a lightning current to a shorter path to your receiver such as through its antenna. Good luck.

1441. Quest: Connect End Of Loop To Beginning ?: Re: In-Door Horizontal [Flat] Loop Antenna - - - No Grounding Required

Newsgroup: rec.radio.shortwave

Hi,

Question re the "loop"

Would you connect the end of the loop to the beginning, thus making a "true loop" up there, or just leave it
open at the end ? Why ?

What is the effect of the vertical run down to the receiver ?
Would you suggest coax for this vertical section, or usually not necessary ?

Bob

Unless anyone gets more than 50% of the total electorate's vote, no one has
a mandate.

1446. Icom R-20 or Alinco DJ-X2000 For Shortwave

Newsgroup: rec.radio.shortwave

For a portable receiver to listen mainly to shortwave which would be better the Icom R-20 or the Alinco DJ-X2000. Again I would be using it for a portable shortwave receiver more then a radio scanner.

2/3s of the Electoral College.

52 to 48 is not a mandate. It demands compromise. Otherwise it
splits the country on minor ideological differences.

I don't know if he does or not, and I'm beginning to think that most of those complaining on this forum really don't know either.

But even if he is overdescribing his radios, he has plenty of company. Most of us realize that sellers by their self-interest tend to emphasize the positive and minimize the negative. Like most on this forum I troll the Ebay auctions. If you look closely at the pictures and ask a few pointed questions you quickly discover that the mint, minty, rarely used, almost perfect, super clean, pristine radio has plenty of warts. Most used radios are used.

Given the number of sellers that overdescribe their radios on Ebay I'm at a complete loss as to why this one guy attracts the unending attention of our resident mutual complaint society.

The K7RA Solar Update

SEATTLE, WA, Dec 9, 2005--This weekend is the ARRL 10-Meter
Contest. The event this year, the one in 2006 and perhaps in 2007
will probably all have very few sunspots, but as we've discussed in
recent bulletins, sometimes 10 meters opens when we least expect
it, even in the middle of the night or very early morning hours.

Mark Madcharo, AB2IW, in Schenectady, New York, will be running
QRP in the contest this weekend and wants to remind us to check
paths from the northern to southern hemisphere. At times these
may provide the only long-distance openings. Don't be afraid to call
CQ on what sounds like a dead band. You can also check the
beacons between 28.2 and 28.3 MHz or the very useful NCDXF
beacons (also, click on "Beacon Transmission Schedule and
Status"). Ten-Ten International has a list of 10 meter beacons on
its Web page. One of the remarkable features of the NCDXF
beacons is that the timing is precisely controlled, so it is easy to tell
where a weak signal is coming from provided you know what time it
is--even if you can't copy the call sign. Also, they step through
several discrete power levels: 100 W, 10 W, 1 W and 100 mW.
Another nice thing is that their network also covers the globe for 12
meters, which can sometimes give a hint of good things to come if
10 meters is not quite open yet.

Sunspot numbers and solar flux declined as Sunspot 826 moved to
the edge of the visible solar disk. Sunspot numbers peaked after
the beginning of the month. Average sunspot numbers for the past
week (the first week of December) were almost 39 points above the
previous week, at 72.6. Geomagnetic conditions were very quiet for
the past few days. For this weekend, the predicted planetary A
index from December 9-12 is 7, 12, 10 and 5. Predicted solar flux
for today (December 9) is 85, and 80 is predicted for the following
five days.

There is a low probability of disruptive solar flares this weekend, although
conditions are
expected to be slightly unsettled compared with those of the past few days. As
this "Solar
Update" is being written, the College K index, measured in Fairbanks, Alaska,
has been zero for
sixty hours straight.

You can access an array of magnetometers in Alaska to compare current to recent
conditions.
The measurements are in NanoTeslas, which are used to calculate the more

familiar K index,
but you can get a good visual indication of relative quiet or activity. Note that at this site you can
vary the time observed from the last 24 hours up to one month, vary the scale, and include
readings for up to eight stations.

Geophysical Institute Prague predicts unsettled conditions for December 9 and 10, quiet to
unsettled December 11, and quiet conditions December 12-15.

David Moore sent us a SpaceRef.com article about space storms and observing upper
atmosphere disturbances.

A personal note: Back in December 1999, propagation bulletin 52 noted that the end of 1999
would end the ninth calendar year of writing this bulletin, and that December marked the 17th
season the author had performed as the grandfather (a non-dancing role) in Pacific Northwest
Ballet's production of "The Nutcracker." This year marks my 23rd season in "The Nutcracker,"
and this month marks the completion of my 15th calendar year compiling this propagation
forecast. When I began work on "The Nutcracker," I thought I'd be fortunate to have the role for
a few years. With this bulletin, I thought my tenure would be just a few weeks. Thanks to you,
the readers, and to the ballet, both have been a blast!

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for December 1 through 7 were 79, 98, 75, 91, 85, 58 and 22, with a mean of
72.6. The 10.7 cm flux was 98.2, 106.3, 101.3, 95.2, 91.7, 89.1, and 89, with a mean of 95.8.
Estimated planetary A indices were 13, 12, 11, 5, 2, 3 and 0, with a mean of 6.6. Estimated
mid-latitude A indices were 12, 10, 9, 3, 2, 2 and 1, with a mean of 5.6.

The FBI estimates that ecoterrorist groups have committed more than 1,100 crimes in the United States since 1976, causing about $110 million in property damage, and the building industry group says $8 million of that damage has been in Washington state since 1996.

Thanks for the story. I do not support the types of actions we read about in the article, which are needlessly destructive and have potential to harm living things. While I sympathize with their motives, their actions are wrong and, frankly, do not serve their causes well.

I will also say that simple property destruction does not automatically "terror" make. Expensive and needless vandalism, perhaps - but application of the "terror" moniker for many things - like knocking over a transmission tower - is hyperbole. Starting fires or bombing is borderline, however, and certainly unwarranted.

DaviD - 'you' Want Compromise ?
DaviD - 'you' Can't Handle Compromise !

DaviD - So 'you' would agree that since 1960 there have only been Three "Clear Winners" of US Presidential Elections : Who Could Claim a "Mandate-By-The-Voters"

* President Johnson in 1964 with 61.1% of the Popular Vote and 486 Electoral Votes which was 434 more then Goldwater.

* President Nixon in 1972 with 60.7% of the Popular Vote and 520 Electoral Votes which was 503 more then McGovern.

* President Reagan in 1984 with 58.8% of the Popular Vote and 525 Electoral Votes which was 512 more then Mondale.

david - now wouldn't you agree . . . :o) ~ RHF
[or david does it boggle your mind ?]

1464. Re: Quest: Connect End Of Loop To Beginning ?: Re: In-Door Horizontal [Flat] Loop Antenna - - - No Grounding Required

Newsgroup: rec.radio.shortwave
Date: 2005-12-09 18:02:45 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1134149698.696467.203320@g14g2000cwa.googlegroups.com>
Source record: 53674

Robert 11,

THE LOOP ANTENNA ELEMENT :
The Loop being a Square/Rectangular Shaped Loop completes the
Circling of the Room around the Four Walls. Both Ends of the Loop
come together at some point on the Wall or at a Corner of the Walls
near the Ceiling and are connected to a Pair {Two} Parallel Wire
Feed-in-Line that goes down to the Radio's Antenna Input.

THE FEED-IN-LINE :
The short vertical Feed-in-Line for this type of In-Door {In-the-Room}
Loop Antenna is usually a Pair {Two} Parallel Wires.
* 300 Ohm TV type Twin Lead works well as a Feed-in-Line
for this type of Loop Antenna.
* Speaker Wire also can be used; either flat or twisted will work.
* The basic wire used to make the Wire Loop Antenna Element
can be continued as a single piece from the Radio up the Wall;
around the Four Walls; and down back to the Radio. If this is
done then it is recommended that the short vertical parallel run
has the two Wires Twisted together.
* A piece of Audio Coax Cable can also be used; especially if
the Radio uses an 1/8" Mono Jack for the External Antenna Input.

WANT A BIGGER LOOP ANTENNA - PUT IT IN THE ATTIC :
[When an Out-Side / Out-Doors Antenna is NOT Permitted.]

KISAP: I recommend using TV type Antenna Parts for most
"In-the-Attic" Antenna installations.

* 75 Ohm Coax Cable for the Feed-in-Line for Household
'man-made' Noise RFI/EMF Reduction.

* TV 75 Ohm to 300 Ohm Matching Transformer (Balun) for
Noise RFI/EMF Reduction and AM/MW Band Signal Reduction.

* TV 300 Ohm Twin Lead for the Wire Antenna Element
50-100 Feet -or- 90 Feet of Insulated Hook-Up Wire.

* "F" Jack to 1/8" Plug (1/8" Mono-Jack Adapter)
RadioShack Catalog # 278-257

RE: Half of my neighbors are in FEMA trailers and the other half are
in tents, its cold and windy, and life here sucks.

You are LUCKY then! At least you got one of the trailers. The media
has shown the sitting and useless trailers paid for handsomely, some at
4-10x their real value, by FEMA to no bid contractors in the DC
Beltway, that they seldom if ever get distributed to the needy.

.......so count your blessings that you even have one!

You're right.

But as has been pointed out by many people, what is "legal" and what are "ethical" or "moral" can be two different things. Lawmakers are no more perfect than those who occasionally break the the law.

The answer to this, of course, is to change an unethical law, not to break it.

Being not especially interested in pursuing this thread longer, I will bow out, and you guys may discuss as you will.

The vulnerable transistor is Q303. Sony used a 2SK152. The MPF102 is
a suitable replacement and it may still be available at Radio Shack.
Someone posted that MCM has 2SK152 FETs, but they also have a $20
minimum order. Do a Google Groups search in rec.radio.shortwave on
"sony 2010 mpf 102" for more information. If you got an early 2010, it
may not have the protection diiodes at D304/D305; you can use four
1N914 or 1N4148 diodes if the MC931 is not available.

BpnJ,

So the 'nice' Eco-Do-Gooders watch and wait until you leave
your Lovely Big Home in the Remote Mountains : Then they
go into House and . . .
* Shit on all the Carpets and Floors.
* Turn-On all the Water to Free It and Clog all the Drains to
Flood every Room.
* Take a Knife and Cut-Up all the Mattresses including your
childrens bedrooms and pour red paint on them to signify Blood.
* Break-Out Every Window to let the Air Back In.
* Take an Axe to your Electrical Panel and other Utilities.
* Flatten the Tires on All Your Cars and Trucks and
Break All the Window.

All Designed To Create FEAR - But that is not Terror according
to You : Because - After All 'they' did not harm a person; and
after all 'they' did it to Save-the-Planet !

Terrorism is Terrorism [.] ~ RHF

Actually, it's extortion.

But whatever it is, it is quite serious, and should be treated accordingly.

1489. To RHF Again: Re: Quest: Connect End Of Loop To Beginning ?: Re: In-Door Horizontal [Flat] Loop Antenna - - - No Grounding Required

Hi,

Thanks so much for reply and info.

I guess what you are suggesting is the "right" way of doing it.
I will try your suggestion once it warms up enough in attic to get up there
without frostbite !

Just trying to learn and understand thing a bit more -

a. Would coax work (meaningfully) better than the 300 ohm TV wire for the
feed line ? Would I need a Balun also ?

b. What are the major performance differences, therefore, between the
apparently 3 different ways of doing it:

- your suggestion of a balanced twin line to receiver
- what I now have, a single wire forming a sort of loop, with the
end open
- a modification to what I now have where the end would be
connected back to the beginning, thus forming a true
loop.

(the second and third config's both having a single, unshielded, wire
running down to the receiver)

Thanks,
Bob

December 9, 2005
Qaeda-Iraq Link U.S. Cited Is Tied to Coercion Claim
By DOUGLAS JEHL
WASHINGTON, Dec. 8 - The Bush administration based a crucial prewar assertion about ties between Iraq and Al Qaeda on detailed statements made by a prisoner while in Egyptian custody who later said he had fabricated them to escape harsh treatment, according to current and former government officials.

The officials said the captive, Ibn al-Shaykh al-Libi, provided his most specific and elaborate accounts about ties between Iraq and Al Qaeda only after he was secretly handed over to Egypt by the United States in January 2002, in a process known as rendition.

The new disclosure provides the first public evidence that bad intelligence on Iraq may have resulted partly from the administration's heavy reliance on third countries to carry out interrogations of Qaeda members and others detained as part of American counterterrorism efforts. The Bush administration used Mr. Libi's accounts as the basis for its prewar claims, now discredited, that ties between Iraq and Al Qaeda included training in explosives and chemical weapons.

The fact that Mr. Libi recanted after the American invasion of Iraq and that intelligence based on his remarks was withdrawn by the C.I.A. in March 2004 has been public for more than a year. But American officials had not previously acknowledged either that Mr. Libi made the false statements in foreign custody or that Mr. Libi contended that his statements had been coerced.

A government official said that some intelligence provided by Mr. Libi about Al Qaeda had been accurate, and that Mr. Libi's claims that he had been treated harshly in Egyptian custody had not been corroborated.

A classified Defense Intelligence Agency report issued in February 2002 that expressed skepticism about Mr. Libi's credibility on questions related to Iraq and Al Qaeda was based in part on the knowledge that he was no longer in American custody when he made the detailed statements, and that he might have been subjected to harsh treatment, the officials said. They said the C.I.A.'s decision to withdraw the intelligence based on Mr. Libi's claims had been made because of his later assertions, beginning in January 2004, that he had fabricated them to obtain better treatment from his captors.

At the time of his capture in Pakistan in late 2001, Mr. Libi, a Libyan, was the highest-ranking Qaeda leader in American custody. A Nov. 6 report in The New York Times, citing the Defense Intelligence Agency document, said he had made the assertions about ties between Iraq and Al Qaeda involving illicit weapons while in American custody.

Mr. Libi was indeed initially held by the United States military in Afghanistan, and was debriefed there by C.I.A. officers, according to the new account provided by the current and former government officials. But despite his high rank, he was transferred to Egypt for further interrogation in January 2002 because the White House had not yet provided detailed authorization for the C.I.A. to hold him.

While he made some statements about Iraq and Al Qaeda when in American custody, the officials said, it was not until after he was handed over to Egypt that he made the most specific assertions, which were later used by the Bush administration as the foundation for its claims that Iraq trained Qaeda members to use biological and chemical weapons.

Beginning in March 2002, with the capture of a Qaeda operative named Abu Zubaydah, the C.I.A. adopted a practice of maintaining custody itself of the highest-ranking captives, a practice that became the main focus of recent controversy related to detention of suspected terrorists.

The agency currently holds between two and three dozen high-ranking terrorist suspects in secret prisons around the world. Reports that the prisons have included locations in Eastern Europe have stirred intense discomfort on the continent and have dogged Secretary of State Condoleezza Rice during her visit there this week.

Mr. Libi was returned to American custody in February 2003, when he was transferred to the American detention center in Guantï¿½namo Bay, Cuba, according to the current and former government officials. He withdrew his claims about ties between Iraq and Al Qaeda in January 2004, and his current location is not known. A C.I.A. spokesman refused Thursday to comment on Mr. Libi's case. The current and former government officials who agreed to discuss the case were granted anonymity because most details surrounding Mr. Libi's case remain classified.

During his time in Egyptian custody, Mr. Libi was among a group of what American officials have described as about 150 prisoners sent by the United States from one foreign country to another since the Sept. 11, 2001 attacks for the purposes of interrogation. American officials including Ms. Rice have defended the practice, saying it draws on language and cultural expertise of American allies, particularly in the Middle East, and provides an important tool for interrogation. They have said that the United States carries out the renditions only after obtaining explicit assurances from the receiving countries that the prisoners will not be tortured.

Nabil Fahmy, the Egyptian ambassador to the United States, said in a telephone interview on Thursday that he had no specific knowledge of Mr. Libi's case. Mr. Fahmy acknowledged that some prisoners had been sent to Egypt by mutual agreement between the United States and Egypt. "We do interrogations based on our understanding of the culture," Mr. Fahmy said. "We're not in the business of torturing anyone."

In statements before the war, and without mentioning him by name, President Bush, Vice President Dick Cheney, Colin L. Powell, then the secretary of state, and other officials repeatedly cited the information provided by Mr. Libi as "credible" evidence that Iraq was training Qaeda members in the use of explosives and illicit weapons. Among the first and most prominent assertions was one by Mr. Bush, who said in a major speech in Cincinnati in October 2002 that "we've learned that Iraq has trained Al Qaeda members in bomb making and poisons and gases."

The question of why the administration relied so heavily on the statements by Mr. Libi has long been a subject of contention. Senator Carl Levin of Michigan, the top Democrat on the Senate Armed Services Committee, made public last month unclassified passages from the February 2002 document, which said it was probable that Mr. Libi "was intentionally misleading the debriefers."

The document showed that the Defense Intelligence Agency had identified Mr. Libi as a probable fabricator months before the Bush administration began to use his statements as the foundation for its claims about ties between Iraq and Al Qaeda involving illicit weapons.

Mr. Levin has since asked the agency to declassify four other intelligence reports, three of them from February 2002, to see if they also expressed skepticism about Mr. Libi's credibility. On Thursday, a spokesman for Mr. Levin said he could not comment on the circumstances surrounding Mr. Libi's detention because the matter was classified.

The radio input is unbalanced, thus connecting a loop to the radio will
unbalance it. Clearly if one side of the radio input is at ground,
then one side of the loop will be at ground.

Any time you connect a transmission line directly to a antenna the coax
shield can affect the antenna unless you decouple it.

You can:
1. Run the coax at a right angle from the antenna elements.
2. Use a choke of some type on the coax.

Otherwise the coax shield become part of the antenna.

> "terror" make. Expensive and needless vandalism, perhaps - but
> application of the "terror" moniker for many things - like knocking
> over a transmission tower - is hyperbole. Starting fires or bombing is
> borderline, however, and certainly unwarranted.

Sometimes what starts out as "simple property destruction" ends up
injuring or killing people.

Knock over a transmission tower and you end up with live wires on the
ground that can kill people.

A vacant building may have someone like a homeless transient in it for
example. Starting a fire could kill someone in the "empty" building. A
fireman showing up to fight the fire could get killed. The fire company
showing up to fight the deliberately set fire would not be able to
attend to another accidental fire that threatens people.

A rule of life is that if you initiate an action of violence it is then
out of your control and sometimes takes on a life of its own.

Destroying peoples property has consequences intended and otherwise the
least of which is physiological and that my friend is terror.

Actually, the previous manglement shot that one in the face. During the previous contract negotiations, the General Mangler pulled Meier unceremoniously off the air, cleaned out his office and sent him packing, until the negotiations were over.

This last time, as he did the previous contract, he'd signed a letter of agreement to return to WLS...in essence a contract of good faith, that it was his intention to come to satisfactory terms with WLS. An agreement to agree, as it were. With a number of weeks remaining on the contract and with fruitful negotiations closing in on an agreement, the General Mangler met Garry after a show, and showed him the door, with the intent of accelerating the process, due to what has now known to be the GM's imminent exit from the station. He wanted it done, so he could leave.

The way Garry was pulled off the air this time was more than enough reason to never return. I know I've walked out for far less. What followed were a series exchanges that were bitter on Garry's side, and hostile on Manglement's.

And with Roe and Garry dominating the market in all desireable demographics, Garry, and rightfully so, believed that market value for the show was dramatically higher than they were being offered. After all, Erich Muller was ranking barely in the top 20 at Q101, and he was pulling $3 million a year, presyndication. The offer for Roe and Garry (negotiated separately, too, btw) for a long term contract was barely a recognizable fraction of that. And with the ongoing effronts by Manglement and the unecessarily hostile way Garry was treated, he opted not to return to WLS.

I've got to say, I don't blame him. I've turned down offers as good for far less reason than Garry had going into this one.

Now, there were some issues where he was a bit over the top. But that's true in nearly every contract negotiation...Jay Leno's Tonight Show negotiation being a notable exception. In general, Garry was asking

for less than other talents with far poorer track records, and taking
far more shit for it.

Well it was a reported 5 year guaranteed contract worth around $7 million...
nothing to sneeze at.

Now he's got what...?

Actually the figures were for the combined show. $7 for five years
for THE number one rated show when an #20 talent is making $3million a
year is an inequity at best. Believe me, the money was there to pay them
what they're worth.

But the money was less a consideration than the abuse he had taken
and was taking from manglement.

Like I said, I've walked out for far less, with more on the table.

What he's got now is less than he'd hoped for. What he'd have if he'd
returned was something he didn't want at all.

There's not enough money to make that worthwhile.

I've been in Radio and TV since I was six. I've worked at and run
stations throughout the Midwest and the Deep South. Finally pulled the
plug after 11 1/2 years at CBS Radio in Chicago, because I couldn't
stomach where the company was taking Radio.

Now, doing basically whatever I want for a living. Some days it's
shooting pictures hanging out of a JetRanger over the Lakeshore,
sometimes doing voiceovers for the networks, or producing for a variety
of businesses. Not nearly the money I was making at CBS, at least not
yet, but I do ok.

We have laws on the books for people that start fires. They're call
arsonists, and the crime is called arson.

We have laws on the books for people that kill people. They're called
murderers, and the crime is called murder.

Murder when combined with the commission of another felony, such as arson,
can be charged as first degree murder, a capital crime, in most states.

One could stretch and call any arson or any murder a terrorist act.. but I don't believe that to be logical, lest we call every crime a terrorist act. I also disagree with calling any crime a hate crime. It's a crime, there are laws on the books to cover it. Period. To call it a hate crime or a terrorist crime gives more credit to the perpetrator and less to the victim in every case. To call something a hate crime is to marginalize the victim as someone worthy of someone's hate.. but I digress.

And Happy Holidays to the rest.

A little Holiday poem follows. i'm not sure if this is new or been
posted here before.
i just got back from DC. as i always do, around the Holidays, no
matter what city i'm in; i like to visit the local Vet hospital. allot
of those guys never get a visitor. so, being a Vet, and an old softy, i
like to visit and say hi. i know, total stranglers. so what. some of
those guys and gales never get a visit from anyone but a Doctor. think
about it. it's great flying your Flag, and a bumper sticker on your
car is nice. but, don't forget about the people who came back, but
didn't make it home. allot of them don't have family.
anyhow, off the soapbox. i dropped into Walter Reed, or what's left
of it, last week. it was great as it always is. all ages there. and a
lot of guys back from Iraq. some really bad. i spent about 6 hours
there. talked to a bunch of people, and got invited to lunch. good time.
as, i was leaving, one of the guys called me back to thank me for just
stopping by. he gave me an envelope, and a hug. and i went on my way.
i opened the envelope on my flight home. inside was a poem that brought
tears to my eyes. i know allot of the regs here are Vets, so i thought
i would share it with everyone. Merry Christmas to all.

"A DIFFERENT CHRISTMAS POEM"

The embers glowed softly,
and in their dim light,
I gazed round the room
and I cherished the sight.

My wife was asleep,
her head on my chest,
My daughter beside me,
angelic in rest.

Outside the snow fell,
a blanket of white,
Transforming the yard to a
winter delight.

The sparkling lights
in the tree, I believe,
Completed the magic
that was Christmas Eve.

My eyelids were heavy,
my breathing was deep,
Secure and surrounded
by love I would sleep

In perfect contentment,
or so it would seem.
So I slumbered,
perhaps I started to dream.

The sound wasn't loud,
and it wasn't too near,
But I opened my eyes
when it tickled my ear.

Perhaps just a cough,
I didn't quite know,
Then the sure sound of
footsteps outside in the snow.

My soul gave a tremble,
I struggled to hear,
And I crept to the door
just to see who was near.

And there, out in the cold
and the dark of the night,
A lone figure stood,
his face weary and tight.

A soldier, I puzzled,
some twenty years old,
Perhaps a Marine,
huddled here in the cold.

Alone in the dark,
he looked up and smiled,
Standing watch over me,
and my wife and my child.

"What are you doing?"
I asked without fear,
"Come in this moment,
it's freezing out here!

Put down your pack,
brush the snow from your sleeve,
You should be at home
on a cold Christmas Eve!"

For barely a moment
I saw his eyes shift,
Away from the cold
and the snow blown in drifts.

To the window that danced with a warm fire's light
Then he sighed and he said
"Its really all right,
I'm out here by choice. I'm here every night."

"It's my duty to stand
at the front of the line,
That separates you
from the darkest of times.

No one had to ask
or beg or implore me,
I'm proud to stand here
like my fathers before me.

My Gramps died
at 'Pearl on a day in December,"
Then he sighed,
"That's a Christmas 'Gram always remembers."

My dad stood his watch
in the jungles of 'Nam',
And now it is my turn
and so, here I am.

I've not seen my own son
in more than a while,
But my wife sends me pictures,
he's sure got her smile.

Then he bent
and he carefully pulled from his bag,
The red, white, and blue...
an American flag.

"I can live through the cold
and the being alone,
Away from my family,
my house and my home.

I can stand at my post
through the rain and the sleet,
I can sleep in a foxhole
with little to eat.

I can carry the weight
of killing another,
Or lay down my life
with my sister and brother

Who stand at the front
against any and all,
To ensure for all time
that this flag will not fall."

"So go back inside," he said,
"harbor no fright,
Your family is waiting
and I'll be all right."

"But isn't there something
I can do, at the least,
"Give you money," I asked,
"or prepare you a feast?

It seems all too little
for all that you've done,
For being away
from your wife and your son."

Then his eye welled a tear
that held no regret,
"Just tell us you love us,
and never forget.

To fight for our rights
back at home while we're gone,
To stand your own watch,
no matter how long.

For when we come home,
either standing or dead,
To know you remember
we fought and we bled,

Is payment enough,
and with that we will trust,
That we mattered to you
as you mattered to us."

author unknown.

M...,

My assumtions were that he said he was getting ready for a Table Top Receiver; and that it would have both a LO-Z 50 Ohm {SO-239 Jack} and HI-Z 500 Ohm {Pair of Terminals} as the External Antenna Inputs.

But in re-reading the original post; I see that it is a RadioShack DX-394 which only has the one SO-239 Jack as it's External Antenna Input.

My general preference with a Ceiling Loop Antenna is to use 300 Ohm Twin Lead as the Feed-in-Line from the Wire Loop Element to the Receiver's HI-Z 500 Ohm {Pair of Terminals} for the External Antenna Input. The exception being if the Radio uses an 1/8" Mono-Jack as the External Antenna Input. Then a short piece of simple Audio Coax Cable with an 1/8" Mono-Plug can be the better choice for a Feed-in-Line from the Loop Antenna to the Radio.

Note - Horizontal Wire Loop Antenna Element directly connected to a Vertical Feed-in-Line.

1557. OT Schwarzenegger Attempting To Rig California Voting Machines

Newsgroup: rec.radio.shortwave
Date: 2005-12-10 01:48:43 UTC
From: David <rickets@knac.com>

UPDATE ON CALIFORNIA DIEBOLD VOTING MACHINE "HACK" TESTING

Letter faxed and mailed Dec. 9, 2005
To: California Secretary of State, Bruce McDannold, cc: Bruce
McPherson
From: John S. Baker, Atty at Law, Dorsey & Whitney So. Cal. Office

ï¿½I represent Black Box Voting, Inc., a non-partisan, non-profit
501c(3)
corporation. On June 16, 2005, Black Box Voting sent a request to
examine the Diebold Election Systems component: the programmed
ï¿½electronic ballad boxï¿½ memory cards used in optical scan and touch
screen voting systems (ï¿½Componentï¿½). This request was made pursuant
to California Elections Code Section 19202 (ï¿½19202 Requestï¿½), which
provides:

ANY PERSON OR CORPORATION OWNING OR BEING INTERESTED IN ANY
VOTING SYSTEM OR PART OF A VOTING SYSTEM MAY APPLY TO THE
SECRETARY OF STATE TO EXAMINE IT AND REPORT ON ITS ACCURACY
AND EFFICIENCY TO FULFILL TIS PURPOSE. THE SECRETARY OF STATE
SHALL COMPLETE HIS EXAMINATION WITHOUT UNDUE DELAY.

ï¿½In the 19202 Request, Black Box Voting asked that the Component be
evaluated for five possible flaws with respect to: the latest optical
scan
systems (firm wear 1.96.4); the paperless touch screen, as used in
Alameda
County on November 2, 2004; the new TSx system proposed for
certification;
and any older optical scan model still in use in California. A copy
of the 19202
Request is attached for your convenience.

ï¿½Even though Section 19202 requires the Secretary of State to complete
his
or her examination without ï¿½undue delayï¿½, Black Box Voting did not
receive
a response to its Request until Saturday, November 19, 2005. In that
e-mail
response, you indicated that the Secretary of State would afford Black
Box
Voting an opportunity to demonstrate the vulnerabilities with the
Diebold
AccuVote-Os, based on the exploits outlined in the Hursti report. You

also
stated that Diebold agreed to make their equipment and their staff
available
for such tests on November 30, 2005, at the California Secretary of
Stateï¿½s
office, 1500 11th Street, Sacramento. In connection with your
response,
you attached a document that provided the ï¿½actual protocol and
conditionsï¿½
(ï¿½Protocolsï¿½) for the proposed test.

ï¿½Unfortunately, the Protocols, which were written by Diebold, were
seriously flawed, because they contemplated testing equipment that
was specifically hand-picked by Diebold, rather than randomly sampling
voting machines that were currently in existence and being utilized.
The
proposed test system (Optical Scan terminal 1.96.6) was of a type that
had
not been certified or used in California and was not an item requested
for
examination in my clientï¿½s 19202 request. However, my clients would
be
willing to evaluate this item, but only in addition to the requested
items. The
test also contemplated that Diebold would control all of the
conditions,
despite the fact that it had a vested interest in the outcome of the
test and
would stand to lose millions of dollars if the test showed flaws in
the voting
systems created by Diebold. My clients have other concerns with the
initial
test protocols; for example the time limits were listed as ï¿½requiredï¿½
but were
left blank. We can discuss these issues once a proper dialog on these
issues
is established. A copy of your response and the Protocols are
attached as
Exhibit 2.

ï¿½On November 22, 2005, less than two business days after you sent your
response, you sent an e-mail at 5:11 p.m. stating that if Black Box
Voting
would like to participate in the test it would have to respond by
10:00 a.m.
the following morning. You also said that the time of the test would
be moved
from 8:00 a.m. to 10:30 a.m. A true and correct copy of your November
22, 2005
response is attached as Exhibit 3.

ï¿½Less than three hours after receiving your November 22 e-mail, Black Box
Voting responded by suggesting that the Protocols be changed by selecting
machines from certain County election offices which have not shown a bias
for Diebold. Unfortunately, you have never responded to this correspondence
or permitted the inspection, despite Black Box Votingï¿½s reasonable request under
California Election Code Section 19202. As such, the Secretary of State has
clearly violated Section 19202.

ï¿½Accordingly, please contact me upon receipt of this letter as to whether
the Secretary of State will allow Black Box Votingï¿½s 19202 Inspection and,
if so, which Protocols he is agreeable to. If we do not receive a response
to this letter by December 16, 2005, Black Box Voting will be forced to pursue
other available legal remedies.ï¿½

# # # # # # # # # # # # # # # #
END OF ATTORNEY LETTER
# # # # # # # # # # # # # # # #

From Black Box Voting:

AT ISSUE
Procedures to be negotiated include:

1) The secrecy provisions written by Diebold -- Black Box Voting takes the
position that all facets of the test should be open to the public and
to the media

2) Access and time limits -- Diebold wrote that a time limit would be set but
did not specify whether it would be 30 seconds or two weeks. Diebold left
a "blank" after the time limit item

Diebold involvement in writing procedures sent to Black Box Voting by Calif.
Secretary of state:

The California Secretary of State provided written testing procedures to
Black Box Voting in the form of a Word Document.

A review of the "properties" feature on this electronic document reveals that

it was written by Steve Pelletier of Diebold Election Systems, then sent to
Black Box Voting from the Secretary of State's office as the Secretary of State's
proposed testing protocols.

It is the position of Black Box Voting that the vendor should not be involved in
nor control the testing of this system.

I don't mean to harp on this too much but I've yet to see a
specific citation of another high rise that's collapsed due to fire.
Don't you find it counterintuitive, to say the least, that the tower
with substantially less burning jet fuel fell in roughly half the
time? Heating steel has been likened to piling maple syrup on a
plate.As fast as you pour on the heat, it dissapates throughout the
piece. If the building were to collapse due to the heat of the fire it
wouldn't happen after the fire had died down, as the tapes of the
firemen attest. And we would have seen this type of steel failure in
high rise fires that burned much longer and much hotter.We're losing
sight of the forest here.
How do we account for the still molten steel in the basement a month
later and the speed of the collapse? All three buildings collapsed
into their own footprint, through the path of MAXIMUM RESISTANCE at
near free-fall speed. Apart from 9-11 this only occurs in the case of
controlled demolitions. The guy leasing the WTC complex is on tape
saying that they decided to "pull it" (WT7) then watched it come
down." This all seems fairly self-evident. For that matter do you
think it's a coincidence that the Air Force was running excercises on
9-11, one involving hijacked airplanes, and another involving planes
flying into buildings?
>World Trade Center towers were designed to stand the stress of an airplane
>strike but the designer never figured on a fully loaded plane's fuel burning
>like that. In retrospect, he probably should have.
>
I believe the architects have been quoted as saying that the fuel load

was considered in design calculations.

You would be better off using 50 ohm coax for the loop antenna and also
the lead-in using the radios low Z input.

If you are in a low noise area then use an unbalanced coax loop for more
pickup. If local noise is a problem then use a voltage balanced loop.

I agree on the choke, but it seems to me the right angle coax would be
an antenna, but not aimed with the rest of the loop. For instance, a
horizontal loop connected to vertical coax would fit your description,
but I would still say the coax unbalanced the loop.

FWIW, I get better results with vertical loops than horizontal.

I don't want to continue an off topic thread but I was addressing the contention that just because the "intent" was to destroy property and not life or limb it could turn out that way due to the destructive force unleashed.

You put a force in motion and there is the law of unintended consequences to contend with. Think about it, now many times does something work out exactly the way you envisioned it?

As for "lest we call every crime a terrorist act" the intent or state of mind of a perpetrator in criminal law is well established as to the extent of charges brought against an individual and the penalty paid for an offense.

If it could be proved that the offense was intended to strike fear in a a racial group or society in general as a terrorist act that would carry additional penalties over the crime committed as another offense. This can manifest as a degree, level or enhancement in the penalty phase of adjudicating a case.

The electrical fields on the coax lead-in with be decoupled from the
same on the antenna elements when it is at right angles to it.

> FWIW, I get better results with vertical loops than horizontal.

I've seen the same thing generally.

One advantage to making a loop antenna out of coax is that it is about
a third larger in electrical length than the single wire due to the
dielectric in the coax causing the velocity factor to be .6 to .7 of
air in most cases.

Looks like their going to execute the dirty cop killing shitskin Stanley "Tookie" Williams in Los Angeles next week and the hoards of niggers are vowing to burn half of Los Angeles to the ground if he's executed.

Keep a look at www.halturnershow.com for late breaking updates if rioting breaks out after this jig is iced next week. Hal always has the latest news.

(found in alt.tasteless - I laughed my ass off reading this, enjoy!)

Jacko racing to 270M ruin
http://www.nydailynews.com/front/story/372924p-317080c.html
By MICHELLE CARUSO
DAILY NEWS WEST COAST BUREAU CHIEF

LOS ANGELES - Michael Jackson faces a crushing $270 million foreclosure in two weeks that could mean he loses his Neverland Ranch and Sony Beatles music catalog, the Daily News has learned.

And as the fallen star's financial D-day, Dec. 20, looms, he is "isolated and intoxicated" on prescription pills in Bahrain while frantic family members rush to plan a rescue mission to the Middle Eastern nation, sources said yesterday.

"It's a meltdown - Michael's life is on the line, physically, and his finances are in ruins because he has listened to the wrong people," said one source familiar with Jackson's business woes.

His family, especially brother Randy and sister Janet, are frantic. "Janet thinks he needs 12 months of rehab. ...Randy wants to get Michael out of the clutches of handlers who don't have his best interests at heart," alleged the business source.

"All of the chickens have come home to roost. Michael will be homeless - a houseguest of the prince [of Bahrain]," said a family source familiar with the crisis.

Jackson's three kids and nanny Grace Rwaramba are with him, guests of the royal family. "Grace has been calling the shots. She has made it difficult for the family to communicate with Michael," said the business source.

The heavily mortgaged and leveraged pop star's financial woes heated up last spring while he was on trial for child molestation, according to the business source.

At the time, Jackson owed $270 million to Bank of America (two loans, one for $70 million and another for $200 million.), the source said. The debt was secured by the singer's Neverland Ranch and his share of the SONY/ATV music catalog, which some experts think may be worth $1 billion or more.

In April, Jackson defaulted on the smaller loan, triggering a total revamp of his finances, the source said. In May, Fortress Investments bought Jackson's $270 million loan package from the bank and tried to

work out a payment plan with the pop star, who was acquitted of all criminal charges last June.

But Jackson failed to make his payments and defaulted in October, according to the source. Now, Dec. 20 looms as the foreclosure date and sources say Jackson has no way of paying off the massive note. That means Fortress will have to sell off his assets to recoup their $270 million, the source said.

In addition, Jackson has failed to make payments on a $2.2 million second mortgage he took out on the family's Hayvenhurst mansion in Encino, Calif., and his kin expect to get the boot in the new year.

Jackson bought the home for his family in the 1970s, and his mom, Katherine, brothers Randy and Jermaine, Jermaine's ex-wife Alejandra and several of Randy and Jermaine's kids now live there. Dad Joe is said to spend little time there.

"They are making plans to move. This is the home where Katherine raised her children and now she has to leave," said the source. Fortunately, Janet Jackson bought her 75-year-old mom a house in Las Vegas, so she won't be homeless.

ObObvious: Years from now, Jacko dealing with calls from collectors who hound him for money, after buying his debt for pennies on the dollar after Great Depression II comes to pass in the next year or so.

Ute's kind of interest me now.

> and am presently spending alot of time logging HFFAX stations,

Many years ago, before sound cards were common
in PCs, I hooked the receiver audio to the joystick input
and wrote a C program to decode wefax.
I got it to work. Synchronization was tricky.
For testing purposes I recorded some faxes on
cassette tape. When I demodulated those recordings
the image would wave back and forth across the
screen. That is because tape recorder tape speed is
stable enough for general audio but it varies noticably
compared to a crystal controlled xmtr or rcvr.

These days I can regularly receive JMH, the Japan
Meteorological agency faxes on 13.595.

That sounds interesting. I like blue-grass and
folk music, American and otherwise.
I heard Wasen, a Swedish (I think) folk group,
on the Prairie Home Companion some years ago.
I bought their CD. It is one of my favorites.

Post some frequencies if it occurs to you.

1600. Wellbrook Antenna Arrives

Newsgroup: rec.radio.shortwave
Date: 2005-12-10 06:22:20 UTC
From: GYT <spam@spam.net>
Message-ID: <25Gdne-KK-aG6QfeRVn-oA@comcast.com>
Source record: 53610

I received my Wellbrook 1530 and have it hooked up. It seems to do a lot better than what I was using... an indoor random length wire about 40 feet long. I have the Wellbrook hooked up to my Icom 718 and it seems to do pretty well. Currently it is setting on the floor leaning against my desk. It will eventually be mounted on a pole in my second story room which I can turn by hand or on in the attic (third floor) with a rotator. It does have the ability to null out interference from other stations on the same or a nearby frequency.

I would like to put it on a pole outdoors but then comes problems with nosey neighbors and the home owners association NAZIs. I was considering getting a Satellit 800 to hook up to the antenna just to play with but haven't decided yet.

Source record: 53618

Telamon,

Yes - A 'smaller' Vertical Coax Cable Loop Antenna
is another opinion to consider for an In-Door Antenna.

The "TRICK" to TV 'type' Coax Cable [Shielded] SWL Loop Antennas {RHF}
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1626
http://groups.google.com/group/rec.radio.shortwave/msg/3ba0aadd03af7bc7

The basic design of the "GreerTech" Coax Cable [Shielded] Loop
Antenna is good and very practical.
GREERTECH => http://www.greertech.com/hfloop/mymagloop.html
LOOP=> http://www.greertech.com/hfloop/mymagloop.html
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1625
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1730
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1539
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/1008
http://groups.google.com/group/rec.radio.shortwave/msg/008005ce8c7f5c9c

"Build - Your - Own" Coax Cable Loop Antenna
http://groups.google.com/group/rec.radio.shortwave/msg/9adc49a6c156fa2b

A GreerTech RG8 Coax Cable Loop Antenna used with an Active
Pre-Selector could be a low cost 'better radio reception' answer
instead of the with AOR and WellBrook WideBand Active Loop
Antennas.

Try an In-Door Antenna 'designed' for Shortwave Listeners
with RFI and EMF Noise Problems . . . The Loop Antenna !
http://groups.google.com/group/rec.radio.shortwave/msg/a76e2b951e35abd9

RG8 AND RG58 'type' Coax Cable "In-Door" Loop Antennas

Loop Antenna Questions : Paired ? -or- A Pair ?
http://groups.google.com/group/rec.radio.shortwave/msg/7052a8e37790a367

Hula Hoop Loop Antenna and more . . .
http://groups.google.com/group/rec.radio.shortwave/msg/84fc1c535a7e8169

"Loop Antenna" Forum {Group} on YAHOO !
LOOP => http://groups.yahoo.com/group/loopantennas/
Discussion of Loop Antennas on all bands including ferrite loops,
air core, all types. All bands SHF, VLF, LF, MF, HF, VHF, UHF, etc.
Shortwave, longwave, receivers, transmitters, all fair game here.

So... is there a Loop Antenna in your Radio Listening Future ?

hope i have you going in circles (thinking of loops) - iane ~ RHF

Source record: 53622

Robert 11,

Here are two messges to read that may answer your questions
and point you in the right direction concerning Horizontal
[Flat] Attic Loop Antennas :

For Shortwave Listening (SWL) here is a "Simpler" Horizontal
[Flat] Loop Antenna in the Attic using common TV type Parts.
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6656
http://groups.google.com/group/rec.radio.shortwave/msg/a759a36c32f5ecd7

Shortwave Listeners (SWL) Horizontal Loop Antenna
built with common and cheap TV Parts
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6135
http://groups.google.com/group/rec.radio.shortwave/msg/b88323867b8b44a3

Using these common TV type Parts these Attic Loop Antennas
are Easy to Visualize, Lay-Out, Build and Use. They are a
good choice for an In-Door Antenna when an Out-Side Antenna
is not practical or possible.
* 300 Ohm TV Twin Lead for a Double Loop Antenna Element
* 300 Ohm to 75 Ohm TV Matching Transformer
* 75 Ohm RG6 Coax Cable for a Feed-in-Line
Connected to your Radio/Receiver and the Shack's Ground
be what that ground may be.

hope this helps - iane ~ RHF

Hi,

bought this radio for my son who is in the military. While the
shipment was on its way, he learned that he would be deployed overseas.
Radio is too big and heavy for where he is going.

Like to offer thr radio to members of this group first!
Bought it from SI at the reduced price. Paid 399.96 plus 16.00 for tax
and 26.95 for delivery.
Will pass on the discount by asking an even $ 440.00 (incl. shipping)

I opened the box and ran it on batteries to make sure it works.
Everything else is untouched.

Will take check, but prefer PayPal.

My eBay rating is 100%

Please correspond by e-maling me directly at:pa330@...

Thanks for looking ,

Pete

Yes, the field that the coax sees is not the same as the antenna, but
the coax is still another antenna.

Roger,

First, thanks for the comments about me on your post. I've been a SW radio listener for 25 years and I'm glad to help. I had the 909 and although it's a good radio, I sold it and stuck with my 2010. The 909 pulls in weak signals just as good, but the radio is smaller and not as good audio. It's not as easy to use as the 2010 either. For pure reception quality, it's up there with the 2010. It just seemed to be too small a radio for me. Sorry to hear about the 2010, that's the risk you take buying off E-bay....

From: jb <jmbraddock@earthlink.net>
Message-ID: <pan.2005.12.10.16.27.53.411075@earthlink.net>
Source record: 53500

I am in the market for a relatively low cost SW radio. I was looking at a Kaito 1102 or 1103 (or the Degen equiv) and stumbled on an 1101 at a surplus store.

I was wondering how the 1101 compares to the 1102 or 1103 or should I be looking elsewhere altogether?

TIA,

Joeb

As with Zenith TO's and many other older radios there is a lot of collector interest. Most modern radios could run circles around the Sony (and the TO), but it is an imposing good looking radio. Bet it sounds pretty good too.

What kind of radio do you have it hooked up to? Do you have it attached to a metal conduit pipe as Wellbrook suggests? Are you using just an el cheapo $60 rotator?

The Sony ICF-2010 was my primary radio from 1988 to 1991. I always found its perforamance to be far far better with the length of supplied wire plugged into the external antenna jack than with the whip. In fact, I always found my '2010 to be a tad deaf off the whip alone.

While I don't know what applications you're wanting to use this radio for, if you're using it primarly at home, you're better off using something other than the whip anyway.

Sorry to hear that you've had this problem with your newly acquired '2010, Roger. That ATS-909 you were asking about in the other thread...well, as an owner/user of both, I would say that performance-wise, the '909 is no '2010.

If the whip is the only problem you've got goin on that '2010, you've still got a far better receiver than the '909, in my opinion.

Best,

Junius

I've seen lots of comments regarding the 1103 and the 1102, not as many
for the 1101. Cost is a concern here and I am able to get the 1101 for
about $20us (shipped) less than the others.

What I am really interested in is the SW comparison between the three.

Joeb

ps thanks for the link. I didn't know you could do that!

I don't have an 1101, but I do have a Degen DE1102 and DE1103. Both were cheaper
than the Kaito versions, but I gave up the US warranty of the Kaito versions. Both have
been great and have had no problems, though the 1103 was manufactured after August 2004
when they fixed a problem some radios had with the tuning knob.

There's a review of the 1101 here
http://www.radiointel.com/review-kaitoka1101.htm

Part of the review says this:
<quote>
Shortwave..this is where the KA1101 really shines. The 1101 breaks its shortwave coverage
into two
bands. 3 - 10 MHz is called SW1. 10-26.1 MHz is the SW2 band. Up/down steps are 5 kHz and
there is
no fine tuning capability. Reception is exceptional just off the whip antenna. In the late
afternoon
on the east coast, I was easily receiving stations in the 16, 22, 25, 3, 41 and 49 meter
bands. WWV
on 15 MHz was fairly good copy. The wide/narrow filter is effective on shortwave as does
the
DX/Local attenuator control. Note that the 1101 does not receive single sideband. The 1102
model
does, however.
As you tune through the 12 defined "shortwave bands", the band is shown on the display

(i.e., 19 M).
I found the 1101 to be the equal of the Sangean 606 and the Radio Shack DX-375/396. The use of the
included extended antenna wire plugged into the external antenna jack improved reception slightly.
Perhaps this is more of a benefit in weaker signal areas. I also tried a real external longwire
antenna. It created an overload situation for the 1101. <end quote>

The 1102 and 1103 have SSB capability, the 1101 doesn't. The 1103 has better speaker sound than the
1102 and 1101. (Though I don't have an 1101 this is easily assumed due to the size of the radios)

The 1103 has detractors who hate the ergonomics. I had no problem with them. Five minutes of using
the radio and it wasn't an issue.

The 1103 is the most sensitive SW off the whip antenna I've ever used.

Speaking for myself, as owner of a 1103, 1102, Sony 7600GR (great radio, but 3 times the cost of the
Degens), YB400 and other portables, and knowing what I know now about all of them, I'd not hesitate
to purchase or recommend an 1103. No contest. Performance per $$$ spent is hands down the best with
the DE1103.

If you can't raise the extra $20 get the 1101. If you can find a way to buy an 1103 that is what you
should do.
Note the above comment about the manufacture date though. There was a small piece of paper included
with NIB models showing the date, and the DE1103s after August 2004 had an additional round sticker
on the front.

Note also that these are my opinions. Some other people who contribute to this group share the same
opinions. Still others will disagree strongly. In fact, you will be judged as unpatriotic for
spending any amount on a radio made in China. Get what you can afford and enjoy it :)

Yes the 75 ohm TV stuff will work OK if that is what you have around.
The only problem there is the cable size does not match up with the 50
ohm connectors. Usually you can hack that well enough to connect things
together. If you are going to buy the coax you might as well but the 50
ohm cable.

> the coax is still another antenna.

You prevent the coax lead-in from becoming another antenna by
terminating it in its characteristic impedance on both ends.

If the coax lead-in is terminated by the loop on one end and the radio
on the other end it will not behave as an antenna. Most people do not
understand this termination requirement and that is just one reason a
impedance matching UNUN is important on a single wire antenna for
example.

Jesus never negotiated with Satan, nor did George negotiate with Great Britain. Satan kept his hands off Jesus because he knew he'd get his ass kicked. Great Britain tried laying hands on the colonies and did get their ass kicked. All of this proves that your two examples are as far from liberals as any truly sane sentient being.

It's a common delusion for deficient personalities to believe that admired and/or famous people belong in their deficiency category. Don't feel bad. I'll bet you believe Napoleon and General Patton were liberals, too.

All righty then it must be that you are into extreme SW listening.

Next up see D Peter Maus on Fear factor. Peter will attempt to log as
many SW bands on a SW8 as he can before touch down with a trailing wire
antenna while parachuting from ten thousand feet.

Good luck Peter.

Are you allowed to hang up a bird feeder? Hang a small feeder from the
top of the loop. The excuse is the loop and pole are used to keep the
squirrels out of the feeder.

I use a cement base designed for holding up a patio umbrella to support
my loop. It uses standard PVC pipe.

The null is quite sharp, though the higher in frequency, the less sharp
the null. Congrats on your new toy.

These antennas go lower than the 150Khz spec. Depending where you live,
you may find data signals around 40Khz and 25Khz. Use USB to hear them.

I have the 1101 and the 1103. The 1103 has much richer audio, SSB
and the ability to off tune a frequency to get away from interference.
The 1101 tune SW in 5kHz steps.
The only thing I can think of that the 1101 is better at is in
battery consumption. It is very easy on batteries while the 1103 chews
thru them in short order.

The growing ethics scandal surrounding former lobbyist Jack Abramoff could explode in the coming months and put at risk Republican control of the House, Rep. Christopher Shays, R-Conn., warned today. "There will be bad stories that come out that are embarrassing to Republicans and will cause them trouble," Shays said at a briefing. "I'm holding my breath." Shays, a moderate often at odds with the more conservative leadership, said GOP leaders do not yet understand the magnitude of the ethics problems swirling around the House -- including Abramoff's relationship with Rep. Tom DeLay, R-Texas, the former majority leader. "If I were leadership, I would be very concerned about the next few months and try to understand what's going on," Shays said. "I am very uneasy that my leadership doesn't get it now. They're going to get it in November if they don't get it now."

A longtime proponent of ethics reform, Shays said members have found lobbyist favors "seductive." For instance, he said a former DeLay aide took him out for dinner last year and only after he called the restaurant afterward did he learn that the dinner cost $86 -- more than the $50 threshold permitted under ethics rules. He said he sent the restaurant a check for the cost of the meal. Shays again said DeLay should not return as majority leader even if he is cleared of state money-laundering charges, and his moderate colleagues agree. "Moderates for the most part would believe that having Tom DeLay back would be a disaster," Shays said. He predicted that the House Republican Conference will hold an election for a new leader.

Does the 1101 use 3 batteries or 4?

I solved - or at least minimized the impact of the 1103 tending to go through batteries.

I've found a wallwart charger and two sets of NIMH batteries to be a flexible solution. I can get about 2.5 weeks of listening about 1-2 hours a day from a charge.

A little dab of Loctite (dont let Loctite get on plastic! I once found that out the hard way) will help keep the little antenna screw and nut tight.I have an old Shortwave radio (one of many radios I bought at the Goodwill store years ago) and the antenna wouldn't stay tightened up no matter what.I cut a little short piece of clear plastic tubing and I slipped that down over the whip antenna to keep the antenna upright,it works like a charm.

No, even those that are in absolutely mint condition go for $300-350. Most sell for less.

$600? Never. It's just not that rare a radio. Lots of them on eBay, always. Look up the completed auctions on D7000Y. It appears that this seller did not do that.

At the Goodwill store this afternoon,among some other thingys I bought,I bought a Pioneer Stereo Receiver SX-690 ($5.00) (on the rear panel of the receiver,it says Pioneer Stereo Receiver Model NO.SX-690 and it was made in Korea) and two large Pioneer speakers ($3.00 each speaker) When I just now set the receiver on my couch to get a better look at it under the light,I heard something loose moving/rattling around in there.Anyway,there was no owners manual with the receiver at the Goodwill thrift store.What can y'all folks who know about those kinds of AM/FM/Stereo receivers tell me about the receiver? Was it an expensive receiver,new price? Is it suppose to be a very good super duper receiver? assuming it works ok? Maybe somebody can devilfinder.com (I hate google) more information and an online operators manual about the receiver?

>
> We now return you to your regularly scheduled conspiracy theories...

People didn't understand phase change when they built and launched the
Titanic. At the cold north Atlantic water temps the steel was only
slighlty
stonger then glass. Too many years ago to count I took a metallurgy
class
as an undergrad. The proff demonstrated the effect temperature had on
the
sheer strength. At low, 40 F, and above ~600F, the strength was greatly

reduced. Please don't ask for specifics because it has just been too
long.

But by the loonies reasoning the Titanic was another conspiracy. Too
bad
for them GWB wasn't around back then.

1718. Has ILGRadio gone bankrupt???

Newsgroup: rec.radio.shortwave
Date: 2005-12-11 02:31:35 UTC
From: sailtamarack@yahoo.ca
Message-ID: <1134268295.048444.226650@g44g2000cwa.googlegroups.com>
Source record: 53778

I think that ILGRadio (http://www.ilgradio.com/ilgradio.htm) might be out of business for the following reasons:

1. ILGRadio still has not released their B05 database for the Winter season (2005-2006). The Website still says a release will be in November.

2. Requests for a password have not been answered after several months even though a non-freemail address was used in the request.

3. The web pages have not been updated in some time.

4. Maybe the 20,000 spam and virus email messages they had to delete wore them down and they gave up. :>)

Does anyone have any news on this company??

Its too bad that these files are not available to the SWL community. But with all the DRAMA associated with this company (user un-friendly comments on website, password nonsense, browser license fees etc.) maybe it is not that big a loss. Hopefully the developers of programs that used this database will switch to other formats like HFCC.

HFCC (http://www.hfcc.org/) has released the B05 schedule. Has anyone converted this file to work with Ham Radio Deluxe or any of the other programs that use the ILGRadio format??

Good DX - Roger

Interesting response Jeff and reminds me of a few stories...

Jeff, WB8NHV wrote:

> I'm not in the business of
> commercial broadcasting,

Well, I'm currently not in broadcasting, but that's how I started my engineering career. I worked at WTPS (1560 kHz, 1 kW daytimer) in Portage, MI, WKMI-AM/WSEO-FM in Kalamazoo, WLIN-FM, Detroit and was Chief Engineer at WQRS and WGPR, both small FMers in Detroit; however, the most fun I had was working at WJBK-TV, Channel 2 in Detroit, the CBS outlet back then. Did lots of neat stuff like studio camera, board audio and filmsound man on a newsreel crew (back when it was actually 16mm film, not tape). Lots of stories and lots of adventures, like going through the '67 Detroit riots on a news crew from 6 in the evening until 9 or 10 the next morning for every night of the riot (and seeing more dead bodies than a 22 year old should ever have to), meeting Earl Ruby, brother of Jack Ruby (yeah, *that* Jack Ruby) and even getting to zip up the dress (not as bad as it sounds) of Marilyn Turner , the weather lady of the day. However, the reason I'm writing this is because of your statement below and WLW comments:

> ...and since I
> understand a lot about the technical end of commercial broadcasting,
> it interests me immensely as well

> ...you need look no further than Cincinnati's WLW on 700 kHz. This
station
> began in the 1930s or so, IIRC, as a 500kW powerhouse that even lit up
> light bulbs in farmhouses near its towers when it was on the air--even
> if the bulbs were not in sockets or were installed in lamps that were
> not turned on or plugged in!

WJBK-TV was owned by old man Storer and his Storer Broadcasting. He also had an AM and FM outlet in Detroit. Well, he got it in his head that he wanted to compete with WJR and boost the power of his AM station (1500 kHz)to 50 kW. However, to avoid co-channel interference, he had to go directional---boy, did he have to go directional! It took a twelve (12!!!) tower array, the first in the country at the time and maybe it was the only one in the country to this day. A map of the pattern was a sight to behold. It looked like a banana, about 15 degrees wide, pointing to the northeast, right at Hudson Bay in Canada. (and we did have a *powerful* signal into Hudson Bay and yet we were virtually un-listenable a little past Toledo). It was *extremely* directional, as

you would expect with 12 towers.

BTW, the transmitter was an RCA "Ampliphase", two 25 kW transmitters phased together to emulate a 50 kW plate modulated rig and thus save the expense (and electric bill) of needing a 25 kW plate modulator. Even though it did (barely?) meet FCC Proof-of-Performance, the radio guys laughingly referred to it as "Ampli-Fuzz".

The transmitter and antenna farm were in Lincoln Park in a residential neighborhood. If you lived in roughly the 345 degree null of the pattern, you were OK, but if your house was in the main lobe, heaven help you!

First, as you mentioned, there were numerous cases of switched off incandescent house lighting flashing in time with the modulation. Next, there was the problem of TV set "rabbit ears" antennas, quite common in those pre-cable days. The home owners would get RF burns every time they tried to adjust their antenna. A similar complaint was offered by the telephone company. Every time their craftsmen worked on the aerial distribution plant or the aerial drop, they would get an RF poke.

The most unusual trouble I heard about was that there was signal rectification (due to dis-similar metals) in the forced air heating ducts and that the homeowner could actually hear the station through the ducts!

With 12 towers, it was a real nightmare to maintain the pattern. The radio engineers hated to see it rain because they then had to spin the antenna phasor controls like the wheels on a slot machine to keep the antenna base current readings in limits. BTW, that 50 kW antenna phasor was quite an impressive piece of equipment.

The other problem they had was that any large metallic structures nearby would put holes or bumps in the pattern. If you drive around Lincoln Park to this very day and look at the Edison high voltage transmission towers to the northeast of the transmitter, you will notice that each tower has a 25 or 30 foot wire mounted alongside a tower leg on stand-off insulators and terminating in a metal box with a variable capacitor inside. This was so the engineers could adjust out any bumps or holes in the pattern caused by the high tension tower.

It cost them millions to install this station and to maintain the pattern. It was said (only semi-jokingly) that it would have been way cheaper for Storer to buy WJR and be done with it!

So, not quite the 500 kW of WLW, but an interesting piece of radio history none the less...

73,
Carter K8VT

Source record: 53789

There are numerous radars running in the HF bands.
Some of them run continuously.

Frequencies heard in San Diego.
4407
4814
12180 to 12100
13370 to 13450
13500 to 13570
13920 to 13970
26340 to 26190

We can examine their echos too.
I recorded the one at 26190 (a while back) for 60
seconds and ran an autocorrelation.
A plot of it is posted in alt.binaries.alt.
We can see that it echos over great distances,
on the order of the circumferance of the Earth.
(The horizontal scale is time converted to distance
figuring the signal travels at the speed of light.)

John: The 1101 uses three batteries and as I mentioned they last a long time. I have discovered, however , that the top battery seems to run down about twice as fast as the two that lie further down. Every time the radio quits I find that the two good batteries are only 1/2 exhausted. The third battery is dead. Generally I find a half dead battery and pop it in and I'm good to go for a long time.
I did the same as you with regards to the 1103. I got some Energizer 2500 ma nimh batteries and they do me for about a month of erratic useage (maybe an hour a day, I am not certain). I didn't time the alkalines I used the first time but I checked them on the multimeter before I inserted them and then checked again after about 5 hours use and found that they were down significantly.
I have used the Kaito supplied AC adapter and it works OK for MW and some of the ham bands but introduces a hum on the 9 mHz band. It also allows noise from the powerlines into the radio and markedly increases background noise.

Cuhulin - I am glad you brought this up.

Yes once again John 'ff' Kerry is implying that US Troops
are Terrorists and War Criminals.
http://www.opinionjournal.com/best/?id=110007639
"there is no reason, Bob, that young American soldiers
need to be going into the homes of Iraqis in the dead of
night, terrorizing kids and children, you know, women,
breaking sort of the customs of the--of--the historical
customs, religious customs."

So now it would appear that US Senator John 'ff' Kerry
is calling Our US Troops Terrorist.

But remember this is a repeat of Kerry's 1970s era
Winter Soldier War Crimes Claims.

The Democrat Party of the USA is now Ruled and Run
by an Anti-America Liberal Left-Wing Clique.

Everything went fairly smoothly when ordering. I had to call Eengland a couple of times but have a special long distance plan so that part didn't cost me more than $1.00. The part that I didn't like is that I waited exactly one month AFTER I placed the order to receive the antenna. This is waaayyy tooo looonggg...

I'm also having a problem mounting the antenna on a mast with the mount that it came with. It is a 20mm which is rougly 3/4 inch but not quite. The thread pattern also is nothing I can seem to match at Home Depot. Alas my poor antenna is still setting on the floor. I'm sure I will figure something out. Oh yeah... the Euro was much stronger than the U.S. Dollar when I ordered so I paid more for it because of that.

Yes a U.S. distributor seems like a logical step. Certainly the United States is a viable market.

The bottom line is that I'm glad that I got this antenna.

I bought a 320D from them a while back and ended up returning it. If memory serves me, the radio is dropped shipped from Ten Tec and you download the software from DXTRA.

I may try it again as before I think the radio was extemely limited by the meager antenna I had at the time. It really needs an external antenna. A built in whip antenna is little better than a coat hanger... maybe even not as good ;)

The current deal DXTRA has means you pay only about $20 or so for the software.

P.S. There was no problem returning the radio.

Please post your opinions on here if you get one. Good Luck!

AFN is the U.S. Armed forces radio network "Armed Forces Network" and broadcast on USB upper sideband in voice. They use popular programming - a lot of sport, relays from CBS and a lot of messages to the troops. They are interesting to listen to.
They are situated on major bases around the world and their sideband transmitters are usually only 3 to 10 Kw in power, making some of these stations great DX catches.

See http://myafn.dodmedia.osd.mil/radio/shortwave/
For you to receive Diego Garcia in South Carolina you would have to consult a sunset/sunrise map based on your location and Diego Garcia.
They transmit on 4319 Khz during their nightime which is about 1400 UTC to 0100 UTC. Then they switch to their daytime transmitter of 12,579 Khz from 0100 to 1400 UTC (approximate). Try sunset in South Carolina for the 4 Mhz and sunrise at your QTH for the 12 Mhz

Sunrise and sunset at your home in South Carolina would give you your best chance, and perhaps overcome the digital transmission that is interfering with reception from Diego Garcia.

Good luck and have fun

.....
.....
I bought 6 stereo receivers last summer at yard sales. Two of them
were perfect and the others had problems but were sort of working. The
most common problems were: one of the final amps blown, a blown fet in
the fm rf amp, scratchy controls, and intermittent capacitors. The main
reason people got rid of them was updating to new digital equipment and
they had been in use since the 70s. As far as I know, Pioneer made
pretty good stuff and you might get lucky. There were so many of them
around, I didnt bother to fix them (average cost=$2). I would make sure
the speakers were working and not shorted and hook them up, power up
and hope for the best. Some of these receivers had poor AM sections and
you might have to play with an antenna. Many people want the latest and
best and throw out perfecly good analog equipment that still produce
cheerful sounds. I still use casettes and they sound pretty good to me.

I used a 1/2'' plastic pipe nipple, appropriately notched, and a
couple UV rated TyRaps.The whip is very heavy and in the strong desert
winds gives the box quite a bit of torquing. Now the bending force is
transferred to the support pole, not the plastic box.

Well guys, I finally managed to get hold of a "as new" sony 2010 in my local paper. I am very pleased with it indeed.
I couldn;t imagine me repairing the fets on the other one, so I fell lucky and got this one at a good price.
So I finally have a 2010 in near mint condition at last.
I am to return the faulty one to the guy who I bought it off on ebay, he was very good over it, he gave me a full refund, so all ended happily for me.
cheers all
Roger

I see the Ace is already a resident.

http://www.steveshamesphotos.com/riolinda17.htm

A charming place, really:

http://www.steveshamesphotos.com/riolindaThumbnails.htm

In the spirit of OTness, I just picked up a '77 R60/7 for six hundred $ Can. It needs side covers and some small stuff but is in very nice shape. Stainless exhausts, etc. After cleaning it, I noticed there were 32mm carbs on it. Weird, I thought..A closer look showed that it's had 750 cylinders/heads put on. I was pretty happy with that, as forty horse just isn't enough. Maybe when I'm seventy.

I just picked up a boat anchor of a cassette player for five bucks. it's
a Pioneer FT 9191 and sounds great. All the controls work, no dirty
pots, etc..It was a good day.It's the heaviest cassette player I've ever
held.

http://www.classic-audio.com/pioneer/pics/fxfthumb/ctf9191.jpg.jpg

I have a half baked theory that if you don't know anything about the
quality of an old receiver/tuner etc., use the WEIGHT as an indicator.

So far so good..

The receiver has a large what I think might be an antenna on the rear panel,there are a bunch of wires from the "antenna" (if it is an antenna) that lead to the inside of the receiver and the base of the "antenna" is made so that it will swing straight up and it can be parked in a horizontal position.Maybe it is an FM antenna.There are a heck of a lot of jacks and things on the rear panel for hooking up speakers and other things,whatever.And there are two outlets on the rear panel that say switched 50w max and unswitched 100w max 120 volts ac and other jacks for input tape 1 and tape 2 and there are some little thumbscrews for hooking up antenna.Heck,this receiver looks too complicated for me.Before I ever get around to trying it out with a couple of speakers,I will get the cabinet off of the receiver and see whatever it is that is loose and rattles around in there.

At one time I was offered several of the 16 mm newsreel cameras and
16 mm color film processing equipment from a TV news department in
California, but the cost of shipping it across the country was just too
high. I wonder how many of those cameras and 16 mm color film processing
systems still exist?

Here's a very good review:
http://www.radiointel.com/review-tecsunpl230.htm

I haven't used the 230, but for me two features are glaringly missing:
ssb capability and a tuning knob. If broadcast signal capabilities are
what you are looking for then this could be a good choice. Consider
also the Tecsun PL-350.

I can guarantee you that it will go as high as the last bidder takes it, but no more. And I'm sure the high bidder will be satisfied with his purchase and will hopefully use it as intended. It is a fine receiver in my experience.

This nonsense, and that's being nice, has been addressed hundreds of
times over the last four years. Molten steel in the basement? LOL, that
always kills me. It never happened. The process claimed by the kooks
wouldn't even melt it, let alone keep it melted.

Talk to an engineer, and learn a little something. Stop going to
kooksites..and maybe you'll stop being a sucker..

The outputs are usually blown because someone shorted the speaker wires.
You can usually figure out that the finals and their drivers are damaged
with a DVM. Sometimes non-polar electrolytic capacitors in the feed-back
loop will be damaged. These will be in the 1 to 20 uF range. You might
also find a current steering diode or two blown in the higher output
amplifiers.

I only paid five dollars for the receiver and three dollars each for the two Pioneer speakers at the Goodwill store yesterday.I could have hooked up the speakers to the receiver at the store and plugged it into a wall outlet tried it out right there,but I didn't think about it at the time.Now,I need to find out (one of these days,if I ever get around to it) what is loose and rattling around inside of the receiver.If something is wrong with the receiver,I reckon I will keep it anyway.I am not going to spend a lot of money on taking it somewhere around here for repair.

Interesting that at 1856 a RNZ announcer came on and said that transmission was closing on this frequency and please retune to 15720.

NZ switched to 15,720 around 10:51 AM our time. They were much better on
11,980 before the switch. Australia is still good on 11,880 right now
but that should be going down hill soon.

Radio-Mart always seem to have stuff from his 'Private Collection'.

Thing is it's only been in his 'collection' for the week or two since he's bought it from someone else.

Hi,

I've seen releases delayed before with no indication on the website. And, as I recall, my password took a few months to get many years ago. Therefore, at this point in time, I'm not worried.

What had begun as an ambitious effort to bolster America's image largely devolved into a secret propaganda war to counter the insurgencies in Iraq and Afghanistan.

[Well yes, that is what you have to do during war time.]

The Pentagon, which had money to spend and leaders committed to the cause, took the lead.

[Well yes, it is the Pentagon that is responsible for executing war.]
...
The Pentagon increased spending on its psychological and influence operations and for the first time outsourced work to contractors. One beneficiary has been the Rendon Group, which won additional multimillion-dollar Pentagon contracts for media analysis and a media operations center in Baghdad, including "damage control planning."

[Well yes, that is called counter-propaganda .]
...
It supplied tens of thousands of audio devices in Iraq and Afghanistan with messages intended to encourage people to vote.

[Vote!? What a concept for the left-wing "liberal" media.]

Rick Ifland, the group's director, said the messages were locally produced, culturally appropriate and part of the "positive developments in democracy, freedom and human rights in the Middle East."

[Positive!? Oh my, don't tell the left-wing "liberal" media.]

The center is not part of a news organization but is a military operation, and those writers and producers are soldiers. The 1,200-strong psychological operations unit based at Fort Bragg turns out what its officers call "truthful messages" to support U.S. objectives, though its commander acknowledges that those stories are one-sided and their American sponsorship is hidden.

[Well yes, they were active in W.W.II. D'oh!]

"We call our stuff information and the enemy's propaganda," said Colonel Jack Summe, then the commander of the 4th Psychological Operations Group, during a tour in June.
...
[Don't try to explain it to left-wing liberals. Anything, even facts and truths, is false in their tiny minds.]
...
As the Bush administration tries to build democracies overseas and support a

free press, getting out its message is critical. But that is enormously difficult, given widespread hostility in the Muslim world over the war in Iraq, deep suspicion of U.S. ambitions and the influence of antagonistic voices.

[Influence of antagonistic voices!? Sounds like the liberals are a tsunami in the Arabic press. But the left-wing doesn't care about that!]

The U.S. message makers who are wary of identifying their role can cite findings by the Pentagon, pollsters and others underscoring the fundamental U.S. problems of credibility abroad.

[You can thank the left-wing "liberal" media for that.]

Defenders of such campaigns argue that they are appropriate and can have impact.

[Yes they can! The left-wing "liberal" media can attest to that fact.]

"Psychological operations are an essential part of warfare, more so in the electronic age than ever," said Lieutenant Colonel Charles Krohn, a retired army spokesman and journalism professor.

[The left-wing "liberal" media knows that very well. That is why they are afraid of you, Professor.]

"If you're going to invade a country and eject its government and occupy its territory, you ought to tell people who live there why you've done it," he said. "That requires a well-thought-out communications program."
...
...the United States does not ban the distribution of government propaganda overseas, as it does domestically...
...
After the Sept. 11 attacks forced many Americans to recognize the nation's precarious standing in the Arab world, the Bush administration decided to act to improve the country's image and promote its values.

"We've got to do a better job of making our case," Bush told reporters after the attacks.

Much of the government's information machinery, including the U.S. Information Agency and some CIA programs, had been dismantled after the Cold War.

[Thank you Impeached Clintoon!]
...
The White House turned to John Rendon, who runs a Washington communications company, to help influence foreign audiences. Before the war in Afghanistan, he helped set up centers in Washington, London and Pakistan so the U.S. government could respond rapidly in the foreign media to Taliban claims.

"We were clueless," said Mary Matalin, then the communications aide to Vice President Dick Cheney.

Rendon's business, the Rendon Group, had a history of government work in trouble spots, In the 1990s, the CIA hired him to secretly help the nascent Iraqi National Congress wage a public relations campaign against Saddam Hussein.

While advising the White House, Rendon also signed on with the Joint Chiefs of Staff... to conduct focus groups around the world and media analysis of outlets like Al Jazeera, the satellite network based in Qatar.
...
The group even examined the president's words. Concerned about alienating Muslims overseas, panel members said, they tried unsuccessfully to stop Bush from ending speeches with the refrain "God bless America."
...
...Rendon advised a subgroup on counterpropaganda issues.
...
...a subsequent Pentagon review found no evidence of plans to use disinformation...

[Pay attention left-wing "liberal" media!]
...
What had begun as an ambitious effort to bolster America's image largely devolved into a secret propaganda war to counter the insurgencies in Iraq and Afghanistan.
...
The company's work was part of an effort to counter disinformation in the Iraqi press. With nearly $100 million in U.S. aid, the Iraqi media have sharply expanded since the fall of Saddam.

About 200 Iraqi-owned newspapers and 15 to 17 Iraqi-owned television stations operate in the country. Many, though, are affiliated with political parties, and are fiercely partisan, with fixed pro- or anti-American stances, and some publish rumors, half-truths and outright lies.
...
An Iraqi daily newspaper, Azzaman, complained in an editorial that the paid propaganda campaign was a U.S. government effort "to humiliate the independent national press."
...
Even in the Pentagon, "some public affairs professionals see us unfavorably" AND INACCURATELY, he said, as "lying, dirty tricksters."

[Pay attention left-wing "liberal" media!]
...
The news that the U.S. military was buying influence was met mostly with shrugs in Baghdad, where readers tend to be skeptical about the media.
...
From quarters at Camp Victory, the U.S. base, the Lincoln Group works to get out the military's message.

[The left-wing "liberal" media certainly won't!]
...
The employees would take news dispatches, called storyboards, written by the troops, translate them into Arabic and distribute them to newspapers.
...

"Many Iraqis know it's from Americans."

[D'oh! Pay attention left-wing "liberal" media! Your anti-US, pro-Kommie bias is glaringly evident.]

The Pentagon's media effort in Afghanistan began soon after the ouster of the Taliban.

In what had been a barren media environment, 350 magazines and newspapers and 68 television and radio stations now operate. MOST ARE INDEPENDENT; the rest are run by the government. The United States has provided money to support the media, as well as training for journalists and government spokesmen.
...
The Pentagon, for example, took over the Taliban's radio station, renamed it Peace Radio and began powerful shortwave broadcasts in local dialects, defense officials said.

Its programs include music as well as nine daily news scripts and 16 daily public service messages, according to Colonel James Yonts, a U.S. military spokesman in Afghanistan. Its news accounts, which sometimes are attributed to the International Information Center, often put a positive spin on events or serve government needs.
...
"We tell the U.S. side of the story to approved targeted audiences," USING TRUTHFUL INFORMATION.

[Pay close attention left-wing liberal Neo-Kommies!]
...
If a news organization produced "a daily drumbeat of criticism of the American military, it would become an issue," said James Kunder, an assistant administrator of the aid agency. He added that in combat zones, the issue of disclosure was a balancing act between security and assuring credibility.

[Pay close attention left-wing liberal Neo-Kommies!]
...
To show off the new media in Afghanistan, aid agency officials invited Matalin, the former Cheney aide and conservative commentator, and the talk show host Rush Limbaugh to visit in February.

They visited a journalism school. Limbaugh later told his U.S. listeners that the students asked him "some of the best questions about journalism and about America that I've ever been asked."

One of the first queries, Limbaugh said, was "How do you balance justice and truth and objectivity?"

His reply: Report the truth, don't hide any opinions or "interest in the outcome of events." Tell "people who you are," he said, and "they'll respect your credibility."

[This is a war, Mr. Limbaugh. This is not a drill. Soldiers lives and peoples freedom are at stake.]

Valiant effort Percy, against hopeless forces and odds, such as the diabolical FEMA, rotten to the core. And your written description of it, most effective. Thanks. Many thanks.

Here is a website that probes into such issues more deeply for those concerned:
http://unemployment_crisis.tripod.com/IMMIGRATION.html

Percy Von Trapp III

I own some pretty decent rental properties and recently I had some vacancies. I was thinking I would make one of my houses which is located in
a big city on the east coast mid atlantic state. So I contact Fema directly
and tried to explain to the lady my intentions of making the house available, instead of realy offering any help she abruptly refers me to

a
website. I go to the website which had nothing to do with making property
available but was a website in which you register to do contract work with
FEMA. At that point I knew I had just got off the phone with a FEMA asshole,
the same ones that everyone seems to be hearing about. Do to other circumstances my vacant unit goes on hold while I handle other business, so
a few weeks later I decide to call FEMA again this time a lady tells me

that
they have database in which to add my information regarding the rental.

For
15 minutes I am on the line providing detailed info regarding the property.
Finally my info is added and expect to get some calls to help place some of
the thousands living in tents and those living short term in hotels who

will
soon be kicked out on the streets this winter. Well over 2 weeks have passed

with not one call. This make me wonder how many others are being
ignored in
offering property to assist in placing the victims.
I think this is a big fiasco by our government that really has no
intention
of resolving Katrina victim issues. Bush had his photo op and has left
the
building regarding Katrina. But Bush does want to rebuild....Iraq that
is,
he wants to nation build another nation while tax paying citizens may
be
dumped on the street in the dead of winter with just the clothes on
their
backs. Anyone else no what the hell is going on with this mess?

> the impedance for this type of antenna is about 100 ohms.

At what frequency?

A large horizontal loop of about 40 feet or larger circumference will exhibit different impedance across the bands as will any single wire antenna or dipole. Except that a large horizontal loop will exhibit a significantly less impedence variation.

> would suggest that, if this type of antenna is used, for best match it
> be mated to the low-Z input of the radio (50 ohms rather than 500),
> although an appropriate transformer could easily resolve this (probably
> minor) problem regardless of the input.

I wouldn't be too concerned about the impedance for receiving purposes. The broadband nature of a large horizontal loop will offset any loss from impedance mismatch compared to any other type of single wire antenna or dipole at the same height.

As a once famous person said, "It's all relative." Or better, "If you build it 'RF' will come."
Just do it and experiment.

Using 300 ohm line gently twisted (don't kink it) in a spiral (any direction - L or R) once about every 12-18 inches or so is generally a better "match" than coax for the broadband large horizontal loop.

>
> b. What are the major performance differences, therefore, between the
> apparently 3 different ways of doing it:
>
> - your suggestion of a balanced twin line to receiver

Don't be concerned about impedence mismatch using a large horizontal loop for reception purposes. It is superior to any other single wire antenna or dipole. The large horizontal loop will perform equally to your random wire on your random wires resonant frequency or multiple but will out perform it over all other bands. Assuming they are compared at the same height.

My horizontal loop is about 80 meters in circumference in the shape of a fat "L" using a 450ohm ladderline feed. It is about 15 meters in height - not ideal, but so what. I can transmit on any HF amateur frequency without using any balun or matching device. Reception exhibits the same characteristics, as it should.

> - what I now have, a single wire forming a sort of loop, with
the
> end open

This is a random wire regardless of the configuration. It is NOT a loop. Creating a loop would make it far more "broadbanded" than a random wire or dipole.

Just try it and experiment.

He didn't imply that they were terrorists or war criminals. Not any more
than your local police are terrorists when they kick down your door, drag
you out of bed, order you to the floor, and ransack your home while serving
a warrant. Kerry didn't say they were committing a crime, and he certainly
didn't call them terrorists. Also, he said something else that makes good
sense - that the US soldiers he talked to didn't like doing those searches
and that it would be better for Iraqi troops to do it. Sounds reasonable to
me.

I suppose you don't think it's anti-Christian or anti-American to ascribe
false meaning to what someone says for the purpose of advancing your
political agenda. But you do it all the time so you probably don't even
think about it.

The real culprit here is ebay themselves. Ebay allowed Martyn to return after being suspended for bidding on his own equipment. Ebay loves the fact that they can double their seller fee income by allowing resellers to sell an item that just sold (on ebay) some two to six weeks prior.

Although Mr. RadioMart is very questionable in his business practices, it is eBay that allows these shenanigans to go unchecked.

Give Martyn enough rope and someday he, indeed, will hang himself. These kind of practices go way back to the days of the Ham Trader Yellow Sheets. These type of re-sellers eventually burn out or destroy their market base themselves.

To all who offered comments, both public and private. Thanks. After reading everything I could on the three Kaito's I was looking at (1101,2,3) and the Tecsun PL-230. I opted to go with the 1101.

I would like to say that there was some feature that I was really after (and it's SW sensitivity is one of those), but truth be told, it was price. I was able to get it for $32us new plus $7 shipping. At the price difference between it and the others, I just couldn't justify going any other way (hopefully, once it arrives, I won't regret it).

I can say that from what I've learned, all three of the Kaitos are similar and yet different. SSB wasn't an issue for me, so even though the 1102 and 1103 have it, it didn't figure in. For the most part, SW and then FM reception is what I was after. And depending on who you talk to, the 1101, 2 and 3 all excel. Portability and battery life was another issue. I did like the controls a little better than the 1103. I didn't like that SW isn't as fine tuneable as the others. But the fact that I got it less than $40, was the major deciding factor.

As for the PL-230, I really considered it, but then found out it isn't a dual conversion and I really wanted that. Plus, it was a little larger than I would like.

Just to make the story complete, I looked at a number of portable radios, but none of the ones in my price range (sub $70) really had the features I wanted (like digital radio vs digital tuning of an analog radio or continuous coverage vs various gaps, etc.)

So again, I'd like to thank everyone who helped.

Joeb

He describes a problem and shows it in a photo. Is there more to it than that?

I've seen quite a few 7700s with that problem and it's a sure sign the CPU is dying. Very common with 7700 radios (and most first generation synthesized radios in general) and I've seen a few sold at hamfests where the sellers dismiss the problem like this seller does. Eventually the CPU will become so bad it won't be able to tune frequencies. The problem goes much further than being just a simple bad solder joint as he mentions.

In any case, it's his radio now and he can advertise it as he wishes. His untruths will eventually come back to haunt him via increasing negative feedbacks. Ebay will pull the plug once one too many complaints are filed.

So the Republicans are pro-Christian then, right? So America is only about one religion, there are no others. I don't think that's what the poepl who founded this country had in mind. But why don't you Republicans put a big old Crucifix in front of the Whitehouse, the Congresss, Supreme Court and every other government building, make everyone pray to Jeusus Christ and turn he Constitution into the 10 Commandmants. ELect Falwell as President and declare war on any non-Christian country. That would make you all feel so much better.

Excellent condition. Works perfectly. All knobs and switches work as they should, and no corrosion in battery compartment.

Price is $75.00 plus shipping in CONUS

Your Marijuana crop is really good this year? Sure sounds like it.The punctuation is the first thing to go by the wayside. Then anything resembling coherency and sentence structure deteriorates to the point of absurdity.Only the addict is left thinking that his 'unique' posting style is somehow intelligent or 'cute'. Nothing could be farther from the truth.

How long have you been a user?
